Commission of Inquiry

Into the Wrongful

Conviction of David Milgaard

before

THE HONOURABLE MR. JUSTICE

EDWARD P. MacCALLUM

# Transcript of Proceedings

and

Testimony before the Commission sitting at the

Delta Bessborough Hotel at

Saskatoon, Saskatchewan

On Thursday, January 19th, 2006

Volume 109

Inquiry Proceedings

## Commission Staff:

Mr. Douglas C. Hodson, Commission Counsel

Mr. Jordan Hardy, Esq., Assistant Commission Counsel

Ms. Candace D. Congram, Executive Director

Ms. Sandra Boswell, Document Manager

Ms. Kara Isabelle, Document Assistant

## Support Staff:

Ms. Irene Beitel, Clerk to the Commission

Ms. Karen Hinz, CSR, and Official Q.B. Court Reporters

Mr. Don Meyer, RPR, CSR,

Mr. Jerry Wilde, Security Officer

Mr. Larry Prehodchenko, Inland Audio Technician

## Appearances:

Mr. Hersh Wolch, Q.C., for Mr. David Milgaard

Ms. Joanne McLean, for Ms. Joyce Milgaard

Ms. Lana Krogan, for Government of Saskatchewan

Ms. Catherine Knox, for Mr. T.D.R. (Bobs) Caldwell

Mr. Garrett Wilson, Q.C., for Mr. Serge Kujawa

Mr. Pat Loran, Esq., for the Saskatoon Police Service

Mr. Chris Boychuk, Esq., for Mr. Eddie Karst

Mr. Bruce Gibson and Ms. Rochelle Wempe, for the RCMP

Mr. Brian Beresh, Esq., for Mr. Larry Fisher

Ms. Jennifer Cox, for Minister of Justice

(Canada), The Hon. Irwin Cotler

# INDEX OF PROCEEDINGS

DESCRIPTION:	PAGE:

1		Transcript of Proceedings
2		(Reconvened at 9:00 a.m.)
3		COMMISSIONER MacCALLUM: Good morning.
4		MR. HARDY: Good morning, Mr. Commissioner.
5		We're ready to proceed with our first witness,
6		Dr. Colin Merry.
7	<u>cc</u>	OLIN CLIVE MERRY, sworn:
8	B	Y MR. HARDY:
9	Q	Good morning, Dr. Merry.
10	А	Morning.
11	Q	Thank you for attending today to give testimony.
12		I understand you currently reside in Winnipeg?
13	А	That is correct.
14	Q	And how old are you?
15	А	Nearly 71.
16	Q	And am I correct that you are now retired?
17	А	Yes.
18	Q	And I understand that prior to your retirement you
19		were a medical professional that specialized in
20		the area of haematopathology?
21	А	That is correct.
22	Q	And can you tell us, please, what haematopathology
23		is?
24	А	It deals with essentially I suppose blood, but
25		also includes well, it includes the whole of
		•

1		the reticular endoceliac system and deals with
2		leukemias, lymphomas, that sort of thing. It also
3		extends into other areas. The lab which I was
4		director of, we had a section which analysed
5		urine, we had another section well, that
6		section well, urine, it was more or less a
7		section on its own because of the volume. Another
8		area also examined body fluids. They ranged from
9		cerebrospinal fluids, acidic fluids, pleura
10		fluids, joint fluids, seminal fluids, any fluid
11		more or less you could recover with a needle from
12		a body, or without a needle shall we say.
13	Q	And this was your expertise, in effect, through
14		most of your career?
15	А	Well, expertise well, I had I guess 40 years'
16		experience. I don't like the term expert myself.
17	Q	And in any event, though, your specialty or your
18		area of work included the study and analysis of
19		bodily fluids?
20	Α	That was a part of my responsibilities.
21	Q	And can you tell us what you were doing in 1969?
22	A	In '69, well, that was after let's see, I went
23		to Winnipeg in '67, so in '69 I had already
24		arrived in Winnipeg.
25	Q	And what were you doing there?

1	A	I was a pathologist and had a university
2		appointment at the University of Manitoba.
3	Q	And do I understand correctly that prior to your
4		time in Winnipeg you actually worked in Regina?
5	A	Yes, I worked at the Grey Nuns Hospital as it was
6		there. I was responsible for the haematopathology
7		and the blood bank, cross matching blood for
8		transfusions and associated responsibilities.
9	Q	And that would have been the case then up until
10		1967 I think you mentioned?
11	A	Up to '67, yes.
12	Q	And during your time in Regina were you familiar
13		with the capacity and abilities of the RCMP
14		forensic lab?
15	A	Not really. We I had minimal contact with
16		them. There was a Dr. Rockaby who was head of the
17		biochemistry section, he did collaborate with them
18		I believe on developing breathalyzers for alcohol
19		concentrations in breath. Blood bank? They
20		occasionally dropped in and we used to give them
21		specimens of blood when they wanted particular
22		blood type. That was only very occasionally. I
23		think they used it for development purposes or
24		some sort of reference, but the technologists sort
25		of dealt with them when they might drop in once
		Meyer CompuCourt Reporting
	(	Certified Professional Court Reporters serving P.A., Regina & Saskatoon since 1980

1		every month or few months.
2	Q	Were you familiar at all with Staff Sergeant Bruce
3		Paynter who worked in the lab at the RCMP facility
4		in Regina in 1967?
5	A	No. I really didn't get to know any of them by
6		name. I mean, I did the odd medical legal autopsy
7		as well but, you know, they came from the RCMP,
8		they witnessed the procedure and took exhibits
9		away, but we never got I never got to be an
10		acquaintance, shall we say.
11	Q	And moving forward in time, what were you doing in
12		1990?
13	А	1990? Well, I was at that time at what was the
14		Winnipeg General Hospital, but we also had to
15		cover all the associate hospitals which later
16		became the Health Sciences Centre and attached to
17		the University of Manitoba.
18	Q	And perhaps you can explain that for us, what was
19		your position in that regard?
20	А	I started off as lecturer when they sort of hired
21		me on a you have a probationary period and, you
22		know, if you survive the first 12 months, that's
23		it, you are on permanent staff, so I was lecturer
24		for 12 month s. That's on the university side.
25		After that I became assistant professor and ended
		Meyer CompuCourt Reporting —————

up as associate professor on the university side

2		and I was the lab director of the sort of section
3		of haematopathology.
4	Q	And I thought I had read somewhere perhaps that
5		you were, or your title at the time was chief of
6		haematopathology, would that be correct, in 1990?
7	А	Yes, I guess I was head on the clinical side and
8		later on the university side as well.
9	Q	Okay. And I understand, Dr. Merry, that in 1990
10		you were consulted respecting the serological
11		evidence that had been entered in the 1969 trial
12		of David Milgaard; would that be correct?
13	A	I was initially consulted by Dr. Peter Markesteyn.
14	Q	And can you take us through that, how did your
15		involvement come about?
16	А	Well, Dr. Markesteyn was a professor of forensic
17		pathology and chief medical examiner in Manitoba
18		and he would consult with the pathologists in
19		various subsections if there was some aspect which
20		involved that particular area and he consulted
21		now, if it was a head injury case or something of
22		that description, he would just consult with a
23		neuropathologist and when there was other
24		involvements which involved my area, he would
25		consult with me and we would go over the case, so
		<b>1</b>

1		I think it was sort of just after lunchtime one
2		day he phoned me in my office and said he had an
3		interesting case which he would like my assistance
4		with, so I was a little curious and walked over to
5		his office to find out what it was about and
6		that's how I sort of became involved.
7	Q	And perhaps take us forward from there, what did
8		you learn and what did you initially attend to?
9	A	Well, there was a question of frozen yellow,
10		yellowish substance which later thawed into a
11		yellow liquid, as to the nature of that material
12		which he asked me to evaluate.
13	Q	And perhaps you could describe for us in some
14		detail, what specifically were you asked to do?
15	А	Well, I was asked to examine the transcript to see
16		what evidence was there and to evaluate or assess
17		what was present, so that's what I did.
18	Q	And the next question I wanted to ask you was what
19		information you had available to you. You've
20		mentioned the transcripts. Was that the
21		transcripts from the trial?
22	А	That was the transcripts from the trial, yes.
23	Q	Did you have any other source information
24		available to you?
25	А	Not really. I did I later communicated with
		<b>1</b>

1		David Asper and I did ask for various other items
2		of information with no success, also regarding the
3		possibility of re-examining some of the material.
4		Now, the anatomic pathology slides which Dr.
5		Markesteyn had in his area, there wasn't a problem
6		recovering them, but all the physical evidence
7		resulted associated with the area which I was
8		interested in were not available.
9	Q	And you mentioned anatomical slides that were
10		available. What were those?
11	A	They were histological sections from the autopsy.
12	Q	And would that have taken the form of pictures and
13		the autopsy report or what
14	A	They would be glass slides.
15	Q	You recall they were glass slides?
16	А	I don't recall they were, but that's what they
17		would have been.
18	Q	Okay.
19	А	And Dr. Markesteyn did mention to me that yes, he
20		had examined the glass slides and did make various
21		comments, but since it was not the area I was
22		involved in, I didn't explore that any further.
23	Q	And I won't dwell on this too long, but what did
24		you understand the glass slides to contain?
25	А	Sections of various organs at autopsy. I know
		<b>4</b>

	ŭ
	there was some difference of opinion on the
	interpretation of some of the uterine slides, but
	I didn't personally see them. It's not my, the
	area I examined.
Q	So in terms of your work, would I be correct in
	stating then that your sole source of information
	was the transcript of the trial itself?
А	What was contained in the transcript and what I
	could try and reconstruct as to what actually
	transpired at the time.
Q	Okay. And you did not have in your possession
	then any original lab reports or lab notes from
	1969; would that be correct?
A	That's correct.
Q	I'm going to turn your attention to some documents
	now, Dr. Merry. The first one I would like you to
	look at is document ID 169913, which will appear
	on the screen in front of you. And you'll note
	it's a memorandum to file from David, who we
	understand to be David Asper, and at the bottom of
	the page you'll note the date, May 30th, 1990, re:
	David Milgaard, and I'll read a portion of this to
	A Q

by a Dr. Merry, who is a

"I was contacted on Sunday, May 27, 1990

24

1 Hematopathologist at the Health Sciences 2 Centre, and connected with the 3 University of Manitoba Medical School. He was consulted by Dr. Markesteyn as to 4 5 the blood grouping issues because that is his specialty." 6 And I'll pause there. Would that information be 8 accurate up to that point that I have read? 9 Α Yes, that would be accurate. 10 And continuing from there it indicates: "He will be conducting a battery of 11 12 tests which he believes will establish 13 among other things: 14 a) that human semen is not yellow in the 15 snow, but rather either clear or white, 16 and not visible to the human eye. 17 likely means that what the police 18 officer found in the snow was urine, and 19 probably urine from some kind of an 20 animal. He believes that certain 21 enzymes present in urine will give rise 22 to a positive test for human semen, as 23 well as any testing for the presence of 24 antigens." 25 And I'll pause there. In terms of that paragraph

1		that I have just read to you, would that be
2		accurate, in terms of what you initially stated
3		to Mr. Asper?
4	A	Well, it's not entirely accurate. Umm
5	Q	Maybe let's take it a sentence at a time. If we
6		look at the first sentence:
7		"That human semen is not yellow in the
8		snow, but rather either clear or white,
9		and not visible to the human eye."
10		Would that be something that you had advised Mr.
11		Asper?
12	A	White and translucent and not visible to the human
13		eye in snow.
14	Q	Okay.
15	A	When frozen it is crystal white as snow. Now
16		there are photographs available of that, I
17		believe, which Dr. Markesteyn and myself
18		organized.
19	Q	Just for the time being, Dr. Merry, I just want to
20		get an accurate account of what you initially
21		advised Mr. Asper in terms of the tests which you
22		were planning and what you thought those tests
23		might establish. And so I think the first
24		sentence, you've got no concern with that,
25	A	No.
		•

		1 age 2 1905
1	Q	from what I have just heard you. The second
2		one:
3		"This likely means that what the police
4		officer found in the snow was urine, and
5		probably urine from some kind of an
6		animal."
7	A	Umm, urine, yes; umm, source of the urine, I
8		believe that urine in snow is more likely to be of
9		animal origin than human origin.
10	Q	But this was an anticipated finding, if I can
11		state it that way, that you relayed on to Mr.
12		Asper?
13	A	Umm, would you repeat that, please?
14	Q	This was, the sentence I've just read to you, was
15		something that you thought you could likely
16		establish by conducting a test?
17	A	Umm, I couldn't conduct a test because I didn't
18		have anything to conduct it on, but I could
19		investigate similar materials to see if they would
20		have appearance or yield results which were
21		obtained.
22	Q	Okay. And in terms of the last sentence he
23		indicates:
24		"He believes that certain enzymes
25		present in urine will give rise to a $\P$

1		positive test for human semen, as well
2		as any testing for the presence of
3		antigens."
4	A	Umm, not present in urine. It is a question that
5		one could get in association with urine containing
6		traces of semen, false positive results, as a
7		result of the urine contamination.
8	Q	And I'm probably going to oversimplify this, but
9		at this point in time were you advising Mr. Asper
10		that the findings in relation to the yellowish
11		substance that we will be talking of could be
12		consistent with that substance being urine?
13	A	Umm, consistent with it being urine. Umm, the
14		presence of spermatozoa had been confirmed in the
15		transcript, so it appeared to be that it was most
16		probably urine, but was contaminated with seminal
17		fluid, which I am very familiar with, perhaps we
18		will get to that later.
19	Q	Yeah, and that's probably as I say, I was just
20		trying to establish sort of what your mindset was
21		at the outset, and we will look at these specific
22		findings in a little bit more detail and,
23		hopefully, make them clear at that point.
24		Moving to the second paragraph,
25		that indicates again, the sentence leading into
		1

these paragraphs was as follows:

Α

"He will be conducting a battery of tests which he believes will establish among other things:",

and if we move to the second paragraph:

"Assuming that the samples were in fact human semen, there is no evidence whatever to establish the presence of blood, and in the absence of such, the only conclusion was that the antigens were present in the semen by virtue of secretion, and therefore excludes Milgaard as the donor based on the evidence."

That according to what was in the transcript, and I know that there was other evidence has come to light. At the time there had been no test for blood, no specific test conducted for blood, on that specimen. A peroxidase reaction was conducted, which is not specific, and since spermatozoa had been identified, if there is any contamination of a specimen by cellular material, which will necessarily contain cytochromes, it would automatically give a positive test.

Q And doctor --

1	A	So it was, shall we say, an error to use a
2		peroxidase test on something which would have been
3		positive anyway.
4	Q	Okay. And we are going to get to that more
5		specifically. Again, just in terms of this
6		statement alone, and try to think back to what
7		your mindset would have been when you were
8		initially starting to work on this matter, and I
9		want to read this statement to you and you can
10		tell me if you agree with it, it says:
11		"Assuming that the samples were in fact
12		human semen, there is no evidence
13		whatever to establish the presence of
14		blood, and in the absence of such, the
15		only conclusion was that the antigens
16		were present in the semen by virtue of
17		secretion, and therefore excludes
18		Milgaard as the donor based on the
19		evidence."
20		Now would that have been, overall, a statement
21		that you would have agreed with at this point in
22		time based upon what you knew at this point in
23		time?
24	А	Well, more or less, I guess. Shall we say if one
25		was satisfied that a result indicating the

1		presence of antigens was a valid result, then this
2		would have excluded Milgaard. On the other hand,
3		if one entertained the possibility that this was a
4		false positive result, then it doesn't get us
5		anywhere.
6	Q	So you are saying worked into your agreement with
7		this conclusion is also the assumption that Mr.
8		Milgaard was a non-secretor and that the A antigen
9		test was accurate?
10	A	Well the evidence presented was Milgaard was a
11		non-secretor and that A antigen had been found in
12		the seminal fluid. Now, if one believes that, yes
13		that sentence is correct.
14	Q	Okay.
15	A	But I came to gravely doubt that and, well, we'll
16		get to that later on.
17	Q	Okay. And we yeah, okay. I'm going to move
18		forward. What information and let me ask this
19		first; do you recall why you were having direct
20		contact with Mr. Asper?
21	A	Umm, well it was Dr. Markesteyn who got me into
22		it, and he said "you better talk to David Asper
23		direct", so that's what I did. I think that was
24		probably our first contact by phone.
25	Q	Okay. I'm going to turn you to another document,

1		it is 155509, and you'll see it's a letter to
2		yourself from David Asper. And he reviews
3		portions of the case, you will see particularly in
4		the middle paragraph he gives you some information
5		relating to the Crown's star witness, Albert
6		Cadrain, suffering from some kind of acute
7		psychiatric disorder, he encloses in the first
8		paragraph a complete copy of the trial transcript,
9		and then the letter concludes shortly after that.
10		I take it this information on Albert Cadrain, and
11		aspects relating to the case outside the
12		serological portions, were not relevant for your
13		purposes?
14	A	Umm, well, I've been involved in a few
15		medical/legal cases in the past. One does
16		encounter, shall we say, unusual characters
17		involved in such events so, you know, they tend
18		not to be upstanding citizens, shall we say. So
19		that sort of thing, you know, didn't really have
20		any great impact on me, shall we say.
21	Q	And wouldn't it be fair to say that it had no
22		relevancy whatsoever for the purposes of the work
23		that you were conducting?
24	A	Umm, no, there is no possible way it could
25		influence investigation of serological results.

1	Q	Okay. I turn you next to 106948. It's a report
2		dated June 1st, 1990 from yourself directed to Mr.
3		Asper, and it's just a two-page report, a very
4		short report; do you recall this particular
5		report, Dr. Merry?
6	A	Yes, I recall that. I sort of gave him a short,
7		preliminary report, you know, just how far I had
8		got evaluating the situation.
9	Q	And I see in the first sentence he indicates, or
10		you indicate:
11		"I have examined the forensic evidence
12		presented at the trial."
13		And, again, do I assume correctly that that would
14		be based upon your review of the trial
15		transcript?
16	A	Yes, umm, that's correct.
17	Q	And I'll read this next portion to you again:
18		"From this I do not believe that the
19		possibility can be excluded that the
20		frozen yellowish substance found near
21		the body of the deceased was dog urine,
22		from a dog positive for a blood group
23		antigen cross reacting with the human
24		blood group A.
25		Approximately 50 percent of

Α

dogs are known to have the Tr antigen which cross reacts in this manner.

Such dog urine might well also contain spermatozoa."

That is correct. I think it was either -- it was around the time -- I have cross-matched, I guess, thousands of units of blood for transfusion to humans, never transfused a dog. I was aware that the variants of the human A antigen are present in animal species, and I knew of the association with Tr antigen in dog. I did phone up the Animal Sciences Laboratory, which I had done some work with in the past, and they provided me with specimens of 21 dogs who they'd had in. didn't want to try and secure dog blood myself, so they gave me the remains of specimens from a day, which I took to the lab I had, and I tested them against human anti A antisera used for blood transfusion purposes, and 11 of them did cross It varied a react and give a positive reaction. Some gave a strong agglutination reaction bit. characteristic of a human Group Al, and others gave a positive agglutination reaction corresponding to a human Group A2, which gives a weaker agglutination. So, you know, I have seen

1		it in the literature, I believed it, but I
2		verified, yes, this is what does happen.
3	Q	Okay. And, just, I want to try and state this in
4		simple terms if we can. You were considering the
5		frozen yellowish substance
6	A	That's correct.
7	Q	which had been concluded to be semen in the
8		course of the 1970 trial, and were you stating
9		here that in fact it could have been urine, and
10		the fact that in 1970 A antigens were found was
11		not necessarily inconsistent with your conclusion
12		that it could be urine; and, similarly, the fact
13		in 1969 that spermatozoa were found in the
14		yellowish substance would similarly not
15		necessarily be inconsistent with the conclusion
16		that the substance was urine, and in fact dog
17		urine?
18	Α	Umm, it meant dog urine was a possibility. Umm, I
19		had demonstrated that a dog could be a source of A
20		antigen in that specimen.
21	Q	And
22	A	And, well, there are other possible sources of A
23		antigen as well.
24	Q	But in simple terms, if they the tests that
25		would have been conducted in 1969 to detect the

1 presence of A antigens, I think what you are saying is because of the Tr antigen, which I take 2 3 it is similar to the A antigens, that the result, although interpreted as being human A antigens, 4 5 could have been just as consistent with it being the Tr antigen in terms of the person who was 6 conducting the test? That is correct, yes. 8 Α 9 And, similarly, dog urine -- implicit in this, 10 what you are stating is that dog urine -- and you've stated expressly -- can contain 11 12 spermatozoa? 13 Α It is as likely to contain spermatozoa as human 14 urine. 15 Okay. The next paragraph states: 16 "The use of a test, "used by hospitals 17 to test for blood in urine", to test for 18 blood in seminal fluid is totally 19 Normal human seminal fluid invalid. 20 specimens will, on standing, test 21 positive as the spermatozoa disintegrate 22 and liberate cytochromes and enzymes 23 which catalyse the benzidine/peroxide

on some seminal fluid specimens

This was known but was tested

submitted to this laboratory for analysis."

And just to give some context for this paragraph, in this paragraph are you considering the evidence at trial that related to the question of whether or not there was blood in the yellowish substance that was being considered?

This is based on the sort of photograph we We did seminal fluid analysis I guess took. virtually for the whole province, we seemed to be the only hospital that did it, and this was for fertility purposes, also some post-vasectomy cases who hoped they weren't fertile any more, so, you know, we had a mixture of cases. particular day when we had set up the test I think the, I think there were about, I think there were 11, the racks have 12 in, specimens of seminal fluid which had come through, and they had been analysed, they had just got finished with them. So I tested them using the dipstick, one tested slightly positive, the rest were all negative. Umm, and the specimen which we, or I used, had a normal sperm count. I believe it was 117 million, the average, the normal, or the motile value is

We normally, you know, take 100 million as,

1		you know, sort of normal. I looked at that
2		specimen myself, no evidence of any blood in, no
3		red cells to be seen, and on testing it was
4		negative for peroxidase reaction. Umm, then it
5		was poured on some snow and stuck in a deep freeze
6		for 72 hours at minus 40.
7		The rest of the specimens which
8		had been finished with, we used to hold them 24
9		hours, they got stuck in the refrigerator. So the
10		following morning, out of curiosity, I re-tested
11		them. Well, the spermatozoa had died overnight,
12		and they tested intensely positive.
13	Q	On the benzidine/peroxide test?
14	A	Yeah.
15	Q	Okay. And so let's
16	A	Except for those which were post-vasectomy.
17	Q	Okay. And, again, I want to try and simplify this
18		paragraph if we can. You start off by saying:
19		"The use of a test, "used by hospitals
20		to test for blood in urine", to test for
21		blood in seminal fluid is totally
22		invalid."
23		And as we know, that test, the hemostix test was
24		applied in 1969 by the Regina lab to test for the
25		presence of blood in what was believed to be

1		seminal fluid, and you are stating here that that
2		was an entirely invalid use in that respect?
3	A	It was. Once a spermatozoa dies it may morph
4		maintain its morphology, its physical appearance
5		down the microscope for a while will not appear
6		much altered, however the cell wall, the proteins
7		of the cytoskeleton will still be there, but the
8		integrity of the cell membrane will have
9		completely been destroyed or degenerated and it
10		will leak. More or less, I guess, like a tea bag
11		dipped into hot water, you know, you can see the
12		tea come out of it, so that's what happens to the
13		cytochromes in a cell when it dies.
14	Q	Okay. And just let me stop you there for a
15		moment. So you agree with the statement that it
16		was an invalid use of that test, being the
17		hemostix test, which I think we're noting is also
18		referred to as the benzidine/peroxide reaction
19		test; would that be correct?
20	А	That is correct.
21	Q	Okay. And if I understand you correctly what you
22		are stating is that if you have a sample of
23		unadulterated semen which you allow to sit for a
24		period of time, and later apply this test, the
25		hemostix or benzidine/peroxide reaction test, that

1 in fact you can get a positive result notwithstanding that it is pure semen that has 2 3 been sitting for a time being? 4 Α You will get a positive result. Now the specimen 5 in question was found in snow, it was said to be minus 40, we reconstructed those conditions. 6 When seminal fluid is frozen for storage for later use for, you know, producing a 8 9 family, that is entirely different to normal 10 freezing. It is snap-frozen in liquid nitrogen 11 at -- I -- it's minus 194 point something degrees, 12 it is literally snap-frozen so that ice crystals 13 do not form and totally disrupt the internal 14 structure. 15 At minus 40, when seminal fluid 16 is dropped onto snow, it is -- it freezes rapidly, 17 but is not snap-freezing frozen, and you will get 18 crystallization within the spermatozoa and they 19 will be dead there and then. 20 How long would it take for, as I say, using again 21 the example of pure semen sitting still and 22 leaving out for a moment the question of it being 23 frozen, how long would it take before the positive 24 hemostix test of our -- or before that test would

show positive?

	il	
1	Α	Umm, well, immediately it thawed the cytochromes
2		would begin diffusing out. When we took the
3		specimen which we had in the deep freeze out I had
4		it on my lab bench in my office and it had started
5		to thaw, and there was just a little fluid, and I
6		was a bit curious so I stuck a test strip in it
7		before I went for coffee and it tested,
8		immediately, extremely strongly positive.
9	Q	Are we
10	А	Umm
11	Q	Are we talking, then, a matter of hours?
12	А	Well it had only just started to freeze to thaw
13		when it came out, after I had took it out of the
14		deep freeze. I mean later on it, you know, thawed
15		right out.
16	Q	Okay. And I just want to be sure I'm following
17		you. You have been talking about the substance
18		being in a frozen state?
19	А	Yeah.
20	Q	And is the breakdown of the sperms that you
21		earlier spoke of, which allows for the leakage of
22		the cytochromes, does that occur in the frozen
23		state or are those sperms, in effect, preserved in
24		the frozen state?
25	А	Oh, well, they are preserved and dead in a frozen
		<b>1</b>

1		state, but they are not going to leak anything,
2		because they are frozen and they are solid. It's
3		when once they thaw that the leakage occurs.
4	Q	And are you saying in the freezing and thawing
5		circumstances which we believe would have applied
6		in this case, being frozen at minus 40, eventually
7		thawing after the passage of hours, in fact days,
8		that the positive hemostix test would have
9		resulted almost immediately upon thawing?
10	A	Yes.
11	Q	Okay. Now was this issue that we have been
12		speaking of, in other words knowledge that pure
13		semen could later test positive on the hemostix
14		test, was that knowledge known in 1969?
15	А	Umm, yes, it was known. I mean there are warnings
16		about using those, it comes in the blurb attached
17		to the package that you can get false positive
18		results, so, you know, if you dip it in, it comes
19		out blue, that is a purely presumptive test and it
20		requires further investigation. It does not mean
21		there is blood there.
22	Q	Right. And we understood that even in 1970 it was
23		understood that it was a presumptive test, that it
24		did not mean necessarily that there was blood
25		there,

		1 age 2 1939
1	A	No.
2	Q	but was it known by those with expertise at
3		that time that one of the possibilities for a
4		positive hemostix test would be simply the
5		degradation of individual sperm sitting in a pure
6		semen sample?
7	А	Well I mean I have been taught medical
8		laboratory technologists, interns, residents for,
9		I don't know, going on 40 years, and I think they
10		are all well informed of that fact in, you know,
11		that process of being taught.
12	Q	So the answer to that is "yes", as of 1969 that
13		knowledge was known amongst those with expertise
14		in this area?
15	A	Well, the ones I taught. I mean, how other people
16		taught, I wouldn't know.
17		COMMISSIONER MacCALLUM: Who did you teach,
18		medical students or other people, simply
19		technicians.
20	A	I taught technologists, medical students, interns,
21		residents.
22		BY MR. HARDY:
23	Q	And that was teaching in 1969?
24	A	That was teaching in 1969.
25	Q	But what about within the body of your peers who
		Meyer CompuCourt Reporting

are working similarly as you are, what would be

'		are working similarly as you are, what would be
2		your conclusion, or reasonable conclusion as to
3		whether or not they would be aware of this aspect
4		that we've just been discussing?
5	A	It's partly the core material they are supposed to
6		know and that's it, they should have learned that.
7	Q	And you were aware of this in 1969?
8	A	I've been aware of it for many years, yes.
9	Q	Okay. Turn to the next page, please, at the top
10		of the page it states:
11		"From the manner in which the test for
12		secretor status was performed it is not
13		possible to be certain if David Milgaard
14		is a secretor or non-secretor of blood
15		group A-antigen."
16	A	Yes.
17	Q	And I take it that you had reached that conclusion
18		again from your review of the trial transcript?
19	A	Yes, I had come to the opinion that one could not
20		rely upon that result. There did not, in the
21		material I had examined, seem to be sufficient
22		validation of scientific requirements to apply the
23		test or analytical procedures. I mean, one has to
24		know exactly what you are analysing, you have to
25		know what interfering substances are present, what
	1	

1		will give false positive and what will give false
2		negative results. I mean, you don't take
3		something out of a packet, stick it into it, test
4		it and say that's positive or that's negative, it
5		is far more complex than that.
6	Q	So from your review of the transcript, you
7		immediately had concerns about the validity of the
8		secretor status testing that had been apparently
9		conducted in relation to David Milgaard?
10	А	I did phone David Asper and ask him where and how
11		was that saliva specimen collected and he told me
12		it was collected in a police station in Saskatoon
13		I believe, it was collected in the police station.
14		Well, I thought it unlikely that a police station
15		would have had a water bath available at least at
16		56 degrees Centigrade or preferably at 100 degrees
17		Centigrade, a boiling water bath available to
18		immediately inactivate the ptyalin, or the other
19		name for it is alpha amylase present in saliva. I
20		thought it was unlikely.
21	Q	Okay. And we are going to look at what the proper
22		secretor status test would have been, but I take
23		your point that you immediately had suspicions
24		about whether or not that secretor test, status
25		test had been properly done?
	1	

		. ago 22002
1	A	I did, yes.
2	Q	I'll turn you
3	A	That is why I suggested to David Milgaard
4		ultimately that I thought that that should be
5		really examined.
6	Q	And when did you suggest that?
7	A	I can't remember the exact dates. It's kind of a
8		while ago, you know. I did suggest it and it did
9		get done. I'm not sure if it was documented or
10		whether we discussed it entirely by phone. He did
11		want me to do the test myself. Well, I told him
12		no, I would not do it myself. It was done
13		initially by another lab and as a lab director, if
14		I thought somebody else's result was inaccurate, I
15		would not repeat it myself, I would make sure that
16		that lab was informed and that they should be
17		given the opportunity to re-examine the matter
18		themselves, so I told him I would rather it was
19		done, repeated by that laboratory that it was a
20		sort of ethical matter I guess between laboratory
21		directors.
22	Q	Okay. But, Dr. Merry, can you place with any more
23		specificity when this conversation was taking
24		place?
25	A	Not really. It was, I don't know, perhaps two,

1		three weeks or longer. It did initiate the
2		subsequent testing which was done.
3	Q	Okay. And that's the best you can tell us on that
4		in terms of timing?
5	Α	Yeah, unless there's something else in the
6		evidence which was actually documented.
7	Q	No, I haven't
8	A	I don't believe it was documented other than
9		telephone conversations.
10	Q	It's not, there are references such as the one we
11		just read, and I guess what I'm asking is would
12		that suggestion have been made by you at the time
13		of this letter, which is June 1st, 1990, or
14		conversations in and around that time period?
15	A	It would be sometime later that I sort of followed
16		up and said, you know, you better get it done,
17		better get it re-examined.
18	Q	Okay. I'm going to turn you next to a report that
19		was done by Dr. Markesteyn dated June 4th, 1990.
20		The document is 155517. I think you've already
21		confirmed for us that you were working with Dr.
22		Markesteyn at the time, being consulted by him in
23		relation to this matter. Are you generally
24		familiar, or were you familiar with this report,
25		Dr. Merry?
		4

		3
1	A	Well, I was familiar with it. I've sort of
2		scanned through it, yes.
3	Q	And was your work included in this report, and
4		when I say your work, your work on the serology
5		aspects?
6	A	Well, I did write a separate report. I think it
7		might be alluded to in this.
8	Q	Okay. And we will get to another report of yours,
9		a longer report, it's actually in March of 1992,
10		but I do want to review some of the sections of
11		this report. Do you recall whether or not you
12		were under the understanding that Dr. Markesteyn
13		was going to be including some of your work and
14		findings in the context of his report?
15	А	Yeah, I was aware of that. I mean, he asked for
16		my assistance and it was more or less understood
17		that he was going to be the principal author of it
18		and I would be a contributing author and it would
19		be included in it.
20	Q	Would it be fair to say then that the serological
21		aspects that we'll look at in a moment was likely
22		information that came from you?
23	А	Yes. He didn't you know, he knew what I was
24		doing, he was witness to the procedure when we
25		organized the photographs, but he, as far as I
		•

1 know, didn't do any further investigation in that 2 area himself. 3 Let's turn to page 155522. Oh, I'm sorry, 4 it's page 6 of the document. The first paragraph, 5 the title is, "Seminal stains at scene, yellowish stains in the snowbank." This is Dr. Markesteyn 6 writing: 8 "I share Dr. Ferris' concerns about the 9 integrity and continuity of the samples 10 of the alleged semen which were recovered on February 4, 1969, at the 11 12 scene. The scene, according to the 13 evidence, had been extensively searched, 14 trampled, and, the know had been melted 15 - in and around the body. There was 16 heavy staining with blood from the 17 deceased. The evidence seems to 18 indicate that two yellowish stains were 19 discovered some four days after the 20 assault took place." 21 And did you have these concerns respecting the 22 integrity and continuity of the samples that you 23 were considering? 24 Α Well --25 Indirectly?

А	Indirectly. When I have done medical or legal
	autopsies, immediately the specimen is collected.
	I have to write in diamond pencil on the tube, the
	glass tube or whatever it's in, my initials so it
	can be identified. There has to be an absolute
	chain of custody. I mean, seminal fluid
	specimens, or semen specimens, that was a problem
	when I went to the Health Sciences Centre in
	Winnipeg, they would get assault cases into the
	emergency or casualty department. A casualty
	officer would examine the patient, take the swab,
	so on, then they would come up to the lab. A
	technologist would get it, then that technologist
	would go off duty at 11:30 at night and another
	technologist would come on, it would be handed
	over to another technologist and down the road.
	Then we would get subpoenas for the whole lot of
	them to go to court to validate the chain of
	custody.
Q	I understand, Dr. Merry, and
А	So I simplified that, I had a box put in the

So I simplified that, I had a box put in the fridge with a baffle in it and I told them the guy who examines the patient comes up, sticks it in that locked box and that is it and then when he has to go to court he comes up to the lab, I will

		•
1		open it with a key that I have and he takes it
2		back again and we hear no more of it and I don't
3		have my staff in court.
4	Q	I understand, Dr. Merry, and I do want to focus
5		though on the questions that I'm asking, and I
6		think the question
7	A	Well, the custody of evidence here
8	Q	was a concern for you?
9	A	Well, yes, it was.
10	Q	In trying to understand the substance, you would
11		have concerns about the integrity and continuity
12		of the samples; would that be correct?
13	A	Well, I found it, shall we say, kind of
14		surprising.
15	Q	Okay.
16	А	I mean, in the British Court I don't think it
17		would have got to court, shall we say.
18	Q	Okay. And in terms of the next paragraph, it
19		states:
20		"Yellowish stains in snowbanks most
21		commonly find their origin, not in human
22		ejaculates, but in urine, most commonly
23		of canine origin. I have been informed
24		that male dog urine often contains
25		semen. "Unused" semen in dogs is not
		4

reabsorbed but is secreted in the urine. Dogs urinate over other dogs' semen and/or urine to establish territory. Dogs have antigens which serologically cross-react with human A-antigen. of the two yellowish stains contained semen, perhaps intermingled with urine. The other one did not contain semen and perhaps contained urine only. We will never know."

And I think we covered these aspects previously in terms of the possibility of this substance being dog urine; would that be correct, Dr. Merry?

Yes, so far as I have been informed that male dog urine, that that is Dr. Peter Markesteyn. one of the last residents I taught actually came from the States, originally a doctor of veterinary medicine, then went into human medicine and qualified in that and then became a resident in I was one of the people who taught her pathology. pathology. She also simultaneously at this university qualified in veterinary pathology, so she was, ended up as both a human and veterinary

pathologist. I specifically asked her about Meyer CompuCourt Reporting =

Α

1

spermatozoa in dog urine since I have not seen a great deal of dog urine, I've seen much more dog blood I guess. I mean, we did used to have drug trials and that sort of thing going on which we did lab testing for research purposes, but I've not seen that much dog urine.

Q So am I correct in --

24

25

- A She confirmed, yes, you can find spermatozoa in dog urine the same as you do in humans.
- Q Okay. This next paragraph states:

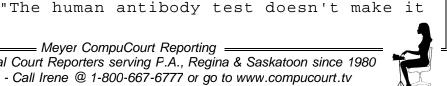

"Human semen does not freeze into a yellowish stain at -40 degrees F. fact, it is white and difficult to spot in snow other than through special techniques such as ultraviolet light exposure, etc. One of the two yellowish lumps was found to contain semen; the other one, although it looked the same, did not contain semen or any other human material in that it did not contain, we are informed, blood, sweat, tears, or saliva. Dr. Emson examined the material prior to having it sent to the Crime Laboratory in Regina. He has informed me that he was sure it was semen, but,

=

1		that he could not say from what species
2		it originated. The Serology Section
3		determined it to be not only semen but
4		of human origin. In order to reach a
5		firm scientific conclusion whether the
6		semen retrieved from the snowbank four
7		days after the assault was indeed human
8		one needs to review the methodology used
9		by the serologist at that time and thus
10		one needs to review the notes that were
11		made at that time."
12		And in particular in relation to that last
13		sentence that I read to you, Dr. Merry, would you
14		agree with that, and would you have agreed with
15		that in 1990?
16	А	Yes, I agree with it and I did not manage to, what
17		is it, needs to review the methodology used.
18		Well, I didn't get a chance to do that either,
19		so
20	Q	You weren't in possession of original lab notes
21		which would advise you of the methodology; would
22		that be correct?
23	A	That's correct.
24	Q	Okay. Just in completing that aspect, the next
25		paragraph states:

1		"I have been informed that the original
2		notes on which this evidence by Staff
3		Sgt. Paynter was based are no longer
4		available. Staff Sgt. Paynter informed
5		me that he does not remember (some
6		twenty years after the event) whether or
7		not he performed specific tests to
8		determine the human origin of these
9		specimens."
10		Would you have similarly been under the
11		impression at that time that the original lab
12		notes were not available, Dr. Merry?
13	А	Yes.
14	Q	Move to the next paragraph which states:
15		"The fact that the semen contained an
16		A-antigen does not make it human"
17		And I'll pause there for a moment. I think we've
18		covered that; correct?
19	A	That's correct.
20	Q	" nor, I am informed, does the enzyme
21		test for phosphatase used at that time
22		make it human."
23		I'm going to pause there for a moment. We know
24		from the trial evidence of Staff Sergeant Bruce
25		Paynter that in examining the yellowish substance
		Meyer CompuCourt Reporting ————————————————————————————————————

1 he conducted a test initially known as an acid 2 phosphatase test and obtained a positive result 3 and I think what's being indicated here is that a 4 positive acid phosphatase result does not 5 necessarily mean that a substance is human; is that correct? 6 That is correct. The prostate produces acid Α It can be distinguished from other 8 phosphatase. 9 acid phosphatases produced elsewhere in the body. 10 It is -- it used to be called heat and formal 11 stable acid phosphatase whereas the other 12 phosphatases were destroyed on treatment with 13 those things, so you could sort of crudely 14 fractionate them in those days, and you would 15 expect to find acid phosphatase in any seminal 16 fluid irrespective of species. Dogs are used as 17 research and experimental model in prostate 18 disease in fact. Elderly dogs and elderly men 19 both on occasion suffer from benign aplasia of 20 prostate, you know, prostatic disease, so it's an 21 ideal experimental model, and yes, the prostate in 22 a dog does very closely resemble, react and have 23 the disease conditions of humans. 24 Okay. The next comment is:

25

1		human if there was any contamination
2		with human blood."
3		And again, I take it you had no information at
4		this point in time that a human antibody test had
5		actually been done on the yellowish substance?
6	A	No, I had no information.
7	Q	And we'll be talking about that aspect in a moment
8		further. And then the last point:
9		"The only way of excluding this semen
10		from being of non-human origin would
11		have been the morphology and/or species
12		specific antigen-antibody reaction
13		tests."
14		And in terms of the first comment, "would have
15		been the morphology," do you understand what Dr.
16		Markesteyn was referring to in referring to that
17		aspect?
18	А	Well, morphology isn't very good for speciation.
19	Q	Just I'm going to stop you there for a moment,
20		Dr. Merry. Do you understand what use Dr.
21		Markesteyn was using of this phrase in the context
22		of this sentence?
23	А	Well, let's see, "The human antibody test doesn't
24		make it human if there was any contamination with
25		human blood." Yes, that's right. "The only way
		Meyer CompuCourt Reporting — 1000

1		of excluding this semen from being of non-human
2		origin would have been the morphology." I
3		don't spermatozoa of different mammalian
4		species look very similar.
5	Q	So again back to my question though, are you aware
6		what use Dr. Markesteyn was making of this phrase?
7	А	"And/or species specific antigen-antibody reaction
8		tests," that I can understand. The morphology
9		bit, morphology is not reliable for speciation.
10	Q	And we're going to get to that in a moment, Dr.
11		Merry, but I take it from what you are saying to
12		me, that you didn't understand or don't understand
13		what use Dr. Markesteyn is putting that term to;
14		would that be correct?
15	А	Well, he's suggesting that morphology might
16		contribute in some way. Well, yes, it would
17		identify, and yes, it would possibly be human, but
18		you couldn't say it was human.
19	Q	Okay.
20		COMMISSIONER MacCALLUM: It might be useful
21		for you to explain to us what morphology means.
22	A	Morphology is the physical appearance of something
23		down a microscope.
24		COMMISSIONER MacCALLUM: Right.
25	A	I mean, a spermatozoa is kind of like a tadpole,
		Mayor CompuCount Paparting

1 it has a head, an acrosome and a very long tail. 2 They all have the same basic morphology. 3 COMMISSIONER MacCALLUM: As between 4 species? 5 Α As between species. There might be some very discrete differences, but, you know, I've looked 6 at I guess thousands of human seminal fluid 8 specimens and unless somebody warned me actually 9 they slipped a dog specimen in, you know, I might 10 very well look at it and not realize that it was 11 different. Now, we do come to another confounding 12 factor in this, I did examine what I knew was human seminal fluid after it had been frozen for 13 14 72 hours and then thawed out. Well, the 15 morphology has, you know, considerably 16 deteriorated, they are very dead, and you then 17 have suboptimal morphology, so some who say they 18 are experts, I always refuse to acknowledge that 19 I'm an expert, once I think I'm an expert I'm in 20 trouble because I think I've learned a lot. 21 Forget it. Now, those who claim to be experts, 22 well, I would be a little weary about that. BY MR. HARDY: 23 24 And, Dr. Merry, we'll I think talk a little bit 25 more about this morphology aspect, and I take your

point that you've just said I think in terms of semen or sperm that sits over time, that there's some degradation which I think I'm hearing you say perhaps would make it even more difficult to distinguish as between species when you are looking at the morphology or physical characteristics of the sperm; would that be correct? That's correct.

25

Okay. If we could move to the next page, 155523, you'll see the heading at the top is "Blood in Semen from Snowbank, " and it states:

> "The evidence suggested that an attempt was made to determine if the seminal fluid specimen retrieved from the snowbank contained blood. Evidence was given that a method used in hospitals at the time was used for the determination of blood in urine. This in all probability was the Hemostix test and, if so, would have been used contrary to manufacturer's instructions which specifically limits the use to a screening test for blood in urine."

I think we talked about this before, but you

1		would agree with that aspect?
2	А	Well, I would agree with it. Now, spermatozoa do
3		occur in urine. I guess and if they are alive
4		you won't get a positive reaction, it's when they
5		die and decide to fuse out that you get a positive
6		reaction. Now, in connection with this, yes, one
7		could say it's a common finding. Whenever such a
8		term is used it has to be defined as far as I'm
9		concerned. Now, I told the technologists, you
10		know, I would like to know how common this is, I
11		want a figure, so after three days they looked at
12		out-patient specimens, patients who had something
13		wrong with them, shall we say, but it was not
14		disabling, it was not affecting their lifestyle in
15		any way, and, you know, we came up to a plus/minus
16		around the 10 percent mark. This was no surprise,
17		I mean, we all knew about it. We never record
18		that except if it is in a female under the age of
19		14 years in which case we are obliged to report it
20		to the Child Protection Agency.
21	Q	You are talking about the location of spermatozoa
22		in
23	A	female urine.
24	Q	Female urine?
25	А	Under 14 years of age.
	Ĭ	•

1	Q	Okay.
2	А	But other than that, we do not report it at all,
3		it is just dismissed as a normal finding.
4	Q	Okay. And as I say, I think we've talked about
5		this before, just finishing off that paragraph:
6		"The evidence given at the trial made it
7		very clear that this test is not
8		specific for blood."
9		And again what's being referred to here is the
10		hemostix test.
11		"Not only do vegetables and leather give
12		a positive reaction but so do also a
13		range of bacteria and contaminated
14		material such as soil as well as the
15		cytocrome enzymes of spermatozoa
16		themselves."
17		And I think we've talked about the cytochrome
18		enzymes of spermatozoa themselves perhaps given
19		that positive hemostix reaction, and additionally
20		here we see the vegetables and leather aspect
21		which was referred to originally at the trial and
22		added to that is also a range of bacteria and
23		contaminated material such as soil which I take
24		it can similarly give a false positive on the
25		hemostix test?

1	A	There's an enormous range of things which can give
2		false positive results.
3	Q	And would it include the things that I've just
4		referred to?
5	А	Yes, and a lot more besides.
6	Q	Okay. The last comment is:
7		"The evidence stated that confirmatory
8		tests (presumably hemochromogen) failed
9		to confirm that this was blood."
10		And as I understand it, after you would have a
11		positive hemostix test, that that would be a
12		presumptive result and that you would go on, in
13		terms of trying to determine whether the
14		substance was blood, to conduct a hemochromogen
15		test which would be a confirmatory test that the
16		substance was blood; is that correct?
17	А	Yes. If we get well, I mean, we do get
18		positive tests for blood in a genuine positive
19		test for blood in urine, we confirm them. A
20		hemochromogen test well, if we see red cells in
21		it, I mean, we don't bother about a hemochromogen
22		test, you can see the red cells in it so we know
23		that it's blood, right, and it will be, you know,
24		reddish in colour. If we can't see red cells in
25		it, then we will have a look at, well, I guess you

1 would call it a hemochromogen test, we would see 2 what absorption bands there were on spectroscopy, 3 and cyanmethaemoglobin has a very strong alpha absorption band at 540 millimicrons, so you can 4 5 say yes, that's haemoglobin. And in terms of the comment itself, it seems that 6 Q Dr. Markesteyn is stating here: "The evidence ...", 8 9 which I take to be the trial evidence: 10 "... stated that confirmatory tests 11 (presumably haemochromogen) failed to 12 confirm that this was blood." Now we've reviewed the trial evidence of Staff 13 14 Sergeant Paynter, he has indicated that he did 15 not go on to conduct the haemochromogen test 16 because there was insufficient sample; do you 17 know otherwise where Dr. Markesteyn may have 18 received information that confirmatory tests 19 were, in fact, conducted? 20 I -- I don't know, this is not my report, --21 Okay. 22 -- I don't know where. Now the other thing, 23 tests wasn't conducted because of inadequate 24 material, well this is a common situation you face 25 with medical specimens, a limited specimen.

1		in this case, to pour the urine or whatever the
2		liquid was into a cuvet, stick it in a double-beam
3		scanning spectrophotometer is no great problem,
4		and then pouring it out again and using it for
5		some other test, this is non-destructive testing.
6	Q	Okay.
7	A	All you do is shine, you know, specific wave
8		lengths of light through it to find where the
9		absorption bands land or are.
10	Q	Okay. I'm going to move you down the par the
11		page to a single paragraph under the A-antigens in
12		the Semen From Snowbank, and I'm look at this
13		paragraph here, and Dr. Markesteyn has stated:
14		"I agree with the opinion expressed by
15		Mr. Brian Jay that if blood
16		contamination of type A had taken place,
17		but that the amount of blood was so
18		little that it would be Hemostix
19		positive and hemochromogen negative, the
20		amount of blood would also be too small
21		to show the presence of A-antigen."
22		And we'll try to state that in simpler terms, but
23		first of all would you agree with that comment,
24		Dr. Merry?
25	Α	I would agree with it. When you are looking for A

Q

Α

Q

Q

antigen in saliva or in seminal fluid there is a
tighter range. You can take the saliva and you
can dilute it down 1 part in 200 with normal
saline with 0.9 percent sodium chloride, you can
dilute it down to say 1 in 200 or you can dilute
it down to say 1 in 500, that is the normal
tighter found in saliva in about 95 percent of
them. I mean you'll get the odd one you can
dilute to 1 in 1,000, you know, they are outliers,
or you will get ones which, you know, don't go
past 50 or something, so there is a tighter. And
the same is true with seminal fluid, there is a
tighter range. And this is nowhere near the
tighter range, we are talking of logarithmic
differences in magnitude.
So
Now it isn't sort of even 10 to the power of 2, a
difference of 100,
Okay.
it's more like 10 to the power of 3, a
thousand.
So if, ultimately, if we try again to think of
this in simple terms we know that in 1969 the
substance tested positive for the presence of A
antigens, we know as well that it tested positive

1		on the hemostix test, which would be a presumptive
2		test for blood, but we know as we also know
3		that there was insufficient sample to conduct the
4		haemochromogen test. Now is this analysis, in
5		effect, saying that, in that circumstance, the
6		presence of the A antigens cannot be accounted for
7		by the presence of blood?
8	A	Well it looks like it is extremely probable that
9		it can't be accounted for that way.
10		Now the detection of A antigen,
11		that's another problem we should go into I guess,
12		because this
13	Q	It
14	А	this doesn't get any simpler, I can assure
15		you,
16	Q	No.
17	А	when you are exact when you are analysing
18		something without exactly, very precisely, knowing
19		what you are analysing, what interfering
20		substances are present, what false positive you
21		might get, and what false negatives you might get.
22		So
23	Q	So the circumstance I just provided to you; would
24		that not be an absolute conclusion then?
25	Α	Umm,
	1	<b>4</b>

Q

In other words, that the A antigens that we know

2		were found in 1969 could not be accounted for by
3		the presence of blood?
4	A	I think that's as near as beyond reasonable doubt
5		as you are likely to get. Umm
6	Q	And would that have been known in 1969?
7	A	Well, it would have been known in 1969, and if you
8		had knew you were in that situation that's one
9		thing, but if you didn't know you were in that
10		situation and really didn't know what you were
11		analysing, that's another situation, isn't it. I
12		mean you could say in good faith "I think this" or
13		in good faith "I think that" but, you know, if you
14		haven't really started from the right place
15	Q	And
16	A	you are not going to arrive at the right
17		destination either.
18	Q	I understand. I'm not trying to oversimplify it,
19		I am if we had a hypothetical scenario in 1969
20		where someone came to you with what was understood
21		to be semen that tested positive for A antigens,
22		and they had advised that it had also tested
23		positive for the hemostix tests, but that there
24		was insufficient blood present to test or to
25		conduct the haemochromogen test, would that have
		Meyer CompuCourt Reporting  Certified Professional Court Reporters serving P.A., Regina & Saskatoon since 1980

led you to the conclusion that the A antigens

1

2 could not have been accounted for by the presence 3 of blood? 4 Α Umm, my reaction would be done -- be forget the 5 hemostix testing, that was inappropriate at any rate, you haven't tested it for the presence of 6 blood; if A antigen is found -- well, you don't 8 anticipate that there's going to be any blood in 9 seminal fluid. 10 Umm, you know, I think in the lab which I last was director of I got the 11 12 technologists to look up how many seminal fluid 13 specimens we had analysed since I'd been running 14 the place, it was around 15,000, I think only on 15 perhaps three or four occasions did we ever detect 16 blood in seminal fluid. I mean it's kind of a 17 rare event. 18 And would the rarity of that event have been known Q 19 in 1969? 20 Well I guess if you are in the business, you know, 21 and you do a fair bit of seminal fluid testing, 22 yes, you would know. Whether somebody who 23 tests -- did far less testing would know, you 24 know, perhaps they might not be so familiar. 25 If we move down to the bottom of this Q

1		section I just note, again, Dr. Markesteyn
2		comments:
3		"The determination of the non-secretor
4		status of Mr. Milgaard, although perhaps
5		acceptable at that time, would now no
6		longer serve as proof of his
7		non-secretor status."
8	А	Well
9	Q	And I'm not sure, from what you have previously
10		told us, whether you would agree with that comment
11		or not?
12	A	Umm, well:
13		"The determination of the non-secretor
14		status of Milgaard, although perhaps
15		acceptable at that time,",
16		well I kind of wouldn't think it was acceptable
17		at the time myself.
18		" acceptable at that time"
19		well I, you know, I would not be enthusiastic
20		about agreeing with that bit.
21		" would now no longer serve as proof
22		of his",
23		yeah, well, I don't entirely agree with it.
24	Q	Okay. And I think you've explained to us before
25		that you have doubts about the tests or the
		1

1		propriety of the test or properness of the test
2		that was conducted in 1969?
3	А	Yes.
4	Q	Okay.
5	A	Now I was consulted and asked to give my opinion
6		on the subsequent analytical report which I cannot
7		personally disclose, there is a caution on that,
8		that it may not be disclosed without specific
9		permission. If the Inquiry is in possession of
10		it, I'm prepared to discuss it,
11	Q	I think
12	A	otherwise it must be obtained by the
13		Commission.
14	Q	I think we have it. You are talking about your
15		subsequent report on secretor status?
16	А	The subsequent RCMP report.
17	Q	Yes, okay, I think we do have that and we'll get
18		to it in a moment.
19		Just going to the conclusion of
20		this report, 1555 oh, I'm sorry, page 8, a
21		couple of comments. The first one here, Dr.
22		Markesteyn states:
23		"I agree with Dr. Ferris that the
24		serological evidence presented at the
25		trial failed to link David Milgaard with
	Ĭ	

1		the semen retrieved from vagina,
2		snowbank, and crotch of panties."
3		A fairly general statement, but would you be in
4		agreement with that comment?
5	A	Well, it's a general statement, and I'm generally
6		in agreement I suppose.
7	Q	Okay. And the next paragraph:
8		"If, to everyone's satisfaction, it was
9		established that the origin of the
10		yellowish patch was unadulterated,
11		uncontaminated human semen, then the
12		presence of the A-antigen in this
13		specimen clearly, from a serological
14		point of view, could not be Mr.
15		Milgaard's."
16	A	The 'yellowish patch'; where is this yellowish
17		patch exactly?
18	Q	This is the yellowish substance we have been
19		speaking of.
20	A	In the snow?
21	Q	Yes.
22	A	Yeah. Well, it's not compatible with what was
23		reported at the time, is it. I mean non-secretor,
24		and then we find A antigen, which I think was
25		false positive result at any rate, but the two $lacksquare$
	II .	The state of the s

1		don't go together, do they.
2	Q	Sure. And I think there's an assumption built
3		into that conclusion that in fact Mr. Milgaard is
4		a non-secretor, we know that that was later proven
5		to be wrong, but based upon that assumption being
6		worked into that paragraph would you otherwise
7		agree?
8	А	Well, 'otherwise agree', umm. I mean I'm agreeing
9		with, you know, we know it's erroneous but if you
10		put the two together I agree with two erroneous
11		bits of information to end up with an answer which
12		would be erroneous.
13	Q	Okay.
14	А	An unusual proposition in logic.
14 15	А <b>Q</b>	An unusual proposition in logic.  I take your point. But, of course, assumptions
15		I take your point. But, of course, assumptions
15 16		I take your point. But, of course, assumptions are built into what I am saying to you, and I
15 16 17		I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those
15 16 17 18	Q	I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those assumptions, that you would be in agreement?
15 16 17 18 19	Q A	I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those assumptions, that you would be in agreement? Yeah.
15 16 17 18 19 20	Q A	I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those assumptions, that you would be in agreement?  Yeah.  And I realize that you are taking issue with those
15 16 17 18 19 20 21	Q A	I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those assumptions, that you would be in agreement?  Yeah.  And I realize that you are taking issue with those assumptions, and in fact we'll look at your report
15 16 17 18 19 20 21 22	Q A	I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those assumptions, that you would be in agreement?  Yeah.  And I realize that you are taking issue with those assumptions, and in fact we'll look at your report which details, more specifically, some of those
15 16 17 18 19 20 21 22 23	Q A	I take your point. But, of course, assumptions are built into what I am saying to you, and I think perhaps we've covered that, based upon those assumptions, that you would be in agreement? Yeah.  And I realize that you are taking issue with those assumptions, and in fact we'll look at your report which details, more specifically, some of those concerns.

1 (Adjourned at 10:29 a.m.) 2 (Reconvened at 10:48 a.m.) 3 BY MR. HARDY: Dr. Merry, I'm next going to direct your attention 4 Q 5 to a document, it's a letter from the Chief Scientist of the Serology Central Forensic 6 Laboratory for the RCMP, it's 185365. The letter is directed to Eugene Williams, counsel for the 8 9 Department of Justice, they are considering Dr. 10 Markesteyn's report that I have just referred you 11 And you will see that, in the first 12 paragraph: 13 "I have attached a copy of a report from 14 Dr. Peter Markesteyn, Chief Medical 15 Examiner, Manitoba. He has reviewed Dr. 16 Ferris' report and all the other 17 information as provided to Dr. Ferris." 18 If we move into the next paragraph, it indicates: 19 "The comments he makes in this area are 20 interesting. From personal experience, 21 I have noted that some canine blood will carry A-like antigens. I cannot make 22 23 any comments regarding canine urine or 24 semen. The morphological differences of 25 human spermatozoa and canine spermatozoa

1		are several. The experienced examiner
2		would not have any problems in
3		distinguishing between human and canine
4		spermatozoa."
5		Is that a comment you would agree with, Dr.
6		Merry?
7	A	Umm, "the experienced examiner". Some people do
8		rather exaggerate the certainty with which they
9		can make decisions. I would be cautious. I would
10		say you can identify spermatozoa. Speciating, I'd
11		want to go to something more scientific, more
12		definitive, DNA analysis today.
13	Q	Okay. And maybe we should continue with this
14		discussion further in terms of the morphology, as
15		we were talking about, are the physical
16		characteristics of spermatozoa, talking canine
17		spermatozoa, human spermatozoa. Start from the
18		beginning, and if I was to ask you, are there
19		morphological differences between human
20		spermatozoa and canine spermatozoa?
21	Α	Not that I would readily appreciate. Under a
22		microscope there might be differences but they are
23		so small I don't think you could use them as
24		reliable criteria to differentiate.
25	Q	What would be some of the differences? I'm not $\P$

1		promising I'm going to understand, but what would
2		be some of the differences?
3	А	I don't know of any definitive differences. I
4		mean if you sort of start from the top to the
5		bottom, they all have a head which looks rather
6		similar, it's sort of ovoid and slightly pointed;
7		that's followed by an acrosome which contains
8		mitochondria; then you've got a tail filament.
9		Umm, you know, they have all got the same
10		components and they look similar. I would not,
11		myself, claim to be able to reliably distinguish
12		between species.
13	Q	Would an experienced examiner in such matters be
14		able to reliably distinguish between species?
15	А	Well, that would be their opinion upon their
16		expertise, I guess. I wouldn't. My opinion of my
17		expertise is such that I wouldn't make such a
18		claim.
19	Q	You wouldn't be comfortable making those decisions
20		yourself or recognizing those differences
21		yourself?
22	A	No.
23	Q	And in terms of someone else who is indicating
24		that the experienced examiner would be able to
25		tell the difference, would you have any reason to

		1 age 22000
1		disagree with that comment?
2	A	Well I won't disagree or agree with it. I mean
3		it's a comment. I mean if you believe it, you
4		believe it, if you don't believe it you don't
5		believe it, it's up to you.
6	Q	Do you believe it?
7	A	I do not believe one can reliably, on morphologic
8		grounds, speciate spermatozoa.
9	Q	Okay.
10	A	Period. Right.
11	Q	I turn you next to document 002094. And this is a
12		lab report that you may recognize or be familiar
13		with, it's dated February 3rd, 1992, and it was a
14		report, I believe, that confirms that David
15		Milgaard is a secretor. Perhaps you could take a
16		look at it for a moment and confirm whether or not
17		I'm correct on that conclusion?
18	А	Yeah, I'm familiar with that report.
19	Q	And this report confirms that David Milgaard is a
20		secretor?
21	А	That is my understanding of it. I don't see how
22		you can interpret it any other way.
23	Q	Okay. Now I'll turn you next to a letter that
24		shortly followed, 165775. So it was a letter
25		directed to yourself dated February 10th, 1992
	ī	

1 from David Asper, and he indicates as follows: "Please find enclosed a copy of the lab 2 3 report recently prepared with respect to 4 secretor status testing performing on 5 the saliva of David Milgaard. I have 6 two questions: 1) Is it possible that an individual can 8 at one time be a "secretor" and at a 9 later time be a "non-secretor?" Will 10 the ingestion of drugs, such as lithium, 11 affect the testing for secretor status? 12 2) What is the most reliable testing 13 procedure available for determining the secretor status of an individual? 14 15 Also, we obviously interpret 16 the test result to conclude that David 17 Milgaard is in fact a secretor. 18 there anything else about this report 19 about which you might wish to comment?" 20 If we could turn to a report dated 155546, a 21 letter dated February 18th, 1992 from yourself to 22 Mr. Asper; do you recognize that letter, Dr. 23 Merry? 24 Yes. 25 Sorry, I missed COMMISSIONER MacCALLUM:

1		the doc ID on the February 10, '92 letter.
2		MR. HARDY: It is the first one is
3		165775.
4		COMMISSIONER MacCALLUM: Thanks.
5	BY N	MR. HARDY:
6	Q	And you respond to Mr. Asper stating:
7		"In answer to your questions:
8		1) David Milgaard always was and always
9		will be a blood group A antigen secretor
10		all of the time. No drugs are known to
11		influence the production or secretion of
12		the A antigen. There are many patients
13		who receive blood transfusions who are
14		also on lithium and no immunohematologic
15		abnormalities are noted in the medical
16		literature."
17		And that would be an accurate account, obviously,
18		of your position at that time?
19	A	Yes. If lithium did affect it it would cause
20		problems in cross-matching. Well, there's nothing
21		in the literature, so that's it. As far as we
22		know it doesn't cause any problems at all.
23	Q	Okay. And then number:
24		"(2) The testing procedure in this
25		circumstance would be entirely reliable

since:

- a) The reliability of the previous result has been challenged and especial care would have been taken, particularly with the prospect of independent testing. The present result vindicates the challenge and demonstrates the unreliability of the previous testing procedure now confirmed by the same laboratory.
- b) In the vast majority of cases one either is a secretor of a blood group antigen within the A.B.O.(H) blood group system and secretes a lot of it, or one is not a secretor; the results are clear cut. In rare instances the results might be difficult to interpret and other confirmatory testing procedures would be appropriate. Had this been the case, they would have been done in view of the previous challenge and the present intense scrutiny of such laboratory tests."

So I take it you are in complete agreement with the results of that lab test that we previously

1		looked at at this time?
2	А	Well the lab test did give me some sort of
3		scientific data which I could assess, and the
4		stuff in the transcript wasn't exactly scientific
5		data, it was rather confusing in fact. Umm, so
6		yes, I'm satisfied. I mean if anybody is in any
7		doubt we can refer to an international reference
8		centre, but I don't think it's necessary, I'm
9		prepared to agree with the RCMP that they did it
10		correctly.
11	Q	Okay.
12	A	Umm, now I think, you know, there are extenuating
13		circumstances as to how the error arose in the
14		first time.
15	Q	Right, and I'm not going to ask you about that
16		right now because I think it's covered to some
17		extent in your report, which we're going to touch
18		upon next, but I will invite you to comment at
19		that point.
20	Α	All right. Now there is another comment, I:
21		"In rare instances the results might be
22		difficult to interpret and other
23		confirmatory testing procedures would be
24		appropriate."
25		Now the report received, I would interpret it
	I	

1		that they just used the normal testing
2		procedures, they did not have any problem. They
3		did not have to resort to an enzyme labelled
4		immunosorbent technique, so-called ELISA
5		technique, they didn't have to do that. I mean,
6		if you can secure a reliable result with a test
7		that is as far as you go, you do not go further.
8		I mean on ordinary microscopy I
9		have made, I suppose, hundreds of thousands of
10		diagnoses. I have also submitted quite a bit to
11		electron microscopy, but I only do that when it's
12		necessary, otherwise you bankrupt the laboratory
13		and the whole system. I mean you don't use a
14		sledge hammer to crack a nut, do you.
15	Q	Okay. I'm going to turn you to a copy of your
16		report, Dr. Merry, that you completed and that was
17		dated March 6th, 1992. The document is 155549 and
18		I assume you recognize that report?
19	A	Well, if you blow it up a bit on the screen, I
20		could read it.
21	Q	Sure.
22	A	That's better, yeah.
23	Q	And I see the date of this is March 6th, 1992.
24		Your preliminary report, I think, was June 1st,
25		1990?

		1 age 22009
1	A	Yeah.
2	Q	Can you tell us what precipitated this particular
3		report?
4	A	Umm, well, you know, I was a bit frustrated that I
5		couldn't actually conduct any testing on anything
6		and everything seemed to have been lost, hadn't
7		been kept, what have you, and then I suddenly
8		realized they hadn't lost one thing, hadn't
9		mislaid one thing, they had him in prison for 23
10		years, so he was available for testing, so I said
11		"let's do it".
12	Q	And are you talking about in terms of the secretor
13		status aspect?
14	A	That's right.
15	Q	Okay. And I see at the outset, and perhaps I'll
16		look at this report, but do you recall first of
17		all do you recall discussions with Mr. Asper prior
18		to providing this report? As I say, you had
19		previously provided a preliminary report two years
20		prior?
21	А	I had provided a preliminary report two years
22		prior and eventually got 'round to submitting the
23		final report.
24	Q	And did you understand
25	А	And then, you know, this came up and we got the
		Meyer CompuCourt Reporting

1		repeat of the saliva test on David Milgaard.
2	Q	Okay. And did you understand how this report was
3		going to be used by Mr. Asper?
4	А	No, not entirely. It's I mean, just because an
5		expert turns up in court and presents evidence,
6		you know, you do have to evaluate and analyse it
7		and, you know, if I turn up in court I like
8		somebody else there as well, and, you know,
9		perhaps they will confirm what I say and perhaps
10		they will give me ideas and I better think about
11		something else, some other possibility. I mean,
12		expert witnesses really shouldn't appear for
13		defence or prosecution, they appear as expert
14		witnesses and give a scientific evaluation.
15	Q	Okay.
16	А	Who they are appearing for should not enter into
17		it.
18	Q	Did you have any further information in terms of
19		source material that you were additionally relying
20		upon in writing this report, and when I say
21		additionally, I mean additional to the trial
22		transcript that you already confirmed for us that
23		you did have?
24	А	No, I didn't have any additional on this, no.
25	Q	Okay. Let's take a look at some of the report.

1 It begins by confirming that Mr. Milgaard is a 2 secretor according to the recent lab report that 3 we looked at and you start in the fourth paragraph 4 by saying: 5 "This totally contradicts the evidence contained in the trial transcript 6 provided by this same laboratory 23 8 years ago, namely, that Mr. Milgaard was 9 not a secretor of A-antigen. 10 I do not consider that this is 11 an advancement. Mr. Milgaard's secretor 12 status is probably irrelevant since, the 13 "yellowish substance" found in the 14 snowbank which was subsequently examined 15 was, mostly likely, dog urine." 16 I'll pause there just for a moment. Were you 17 comfortable with the use of that terminology, "most likely"? 18 19 Well, it appeared most likely, but that is not a 20 scientific term. Most likely, yes, but we don't 21 know. 22 Q But you were comfortable with the use of the term 23 "most likely"? 24 Α It was not used in a scientific context. 25 You don't use terms "most likely". If there's a Meyer CompuCourt Reporting =

1		probability, you give some evaluation of
2		statistical probability.
3	Q	But you indicate I mean, you were a scientist
4		looking at this, you indicate you don't use terms
5		like "most likely", but you have used that term?
6	А	I did use it, yes.
7	Q	And I'm asking if you are comfortable with the use
8		of that term?
9	A	Well, I still believe that yellow stains in snow
10		are most likely dog urine and not human urine. I
11		mean, they could be human urine in some I mean,
12		in the east end of London there are some
13		undesirable districts and I guess human urine is
14		more prevalent than in other areas, but, I mean,
15		dog urine is more common in snow than human urine.
16	Q	Okay. Let's continue to the next page, it starts
17		sorry, at the page we were just on it says:
18		"From"
19		And then the next page,
20		" the transcript it appears unlikely
21		that the original specimen of saliva
22		obtained from Mr. Milgaard was
23		immediately heat inactivated, as is
24		required in determining antigen secretor
25		status. Failure to do this would result
	ii e	

1		in the enzyme ptyalin, which is present
2		in saliva, digesting the A-antigen
3		before the specimen was examined. This
4		would account for the false negative
5		A-antigen secretor status obtained. In
6		Caucasians, the incidence of positive
7		secretor status is approximately 78%,
8		the incidence of blood group A is
9		approximately 45%."
10		And do I take it correctly that you were
11		explaining in greater detail what the likely
12		failure was in terms of the initial lab test for
13		secretor status?
14	A	Yes. I thought that it was probably it wasn't
15		immediately heat inactivated which would make the
16		result unreliable.
17	Q	And would that be because this enzyme you
18		mentioned, ptyalin
19	A	Ptyalin.
20	Q	Sorry, ptyalin?
21	А	Yeah. Well, call it alpha amylase.
22	Q	Alpha amylase?
23	A	It's now referred to as alpha amylase, yes.
24	Q	But it would allow that substance to persist which
25		would in effect digest the A-antigens?
		4

1	A	Yes. The A-antigen is a glycol protein and that
2		is it is an amylase and it will digest the
3		glycol part, the glycogen moiety of the molecule
4		and the molecule would fall to bits so it gets
5		digested.
6	Q	Okay. Then moving down to point 1, it states:
7		"Frozen lumps of "yellowish substance"

8

9

10

11

12

23

24

25

found in snowbank, later thawed to a "yellowish liquid":

Two observers, Joseph Penkala and Bruce Ivan Paynter stated that this substance was yellowish. Seminal fluid is translucent white in colour, so this could not have been seminal fluid! In the 24 years that I have been the Medical Section Head of this laboratory, we have examined approximately 15,000 specimens of seminal fluid and have not ever encountered such a specimen which could be described as "yellowish"! degree of translucency may vary slightly according to the sperm count but, the colour is **never** "yellowish"! There is no biological pigment in seminal fluid to impart colour."

1		And I take it that would have been your position
2		at the time, Dr. Merry, that you were writing
3		this report?
4	A	That was my position at the time. It's still my
5		position.
6	Q	And you indicate, "Seminal fluid is translucent
7		white in colour, so this could not have been
8		seminal fluid," and again
9	Α	It couldn't have been seminal fluid. It might
10		have had seminal fluid in it, but it was not
11		seminal fluid.
12	Q	Do you mean it was not pure seminal fluid?
13	А	It was not pure seminal fluid by a long way.
14	Q	So contaminated seminal fluid could give a
15		yellowish appearance?
16	А	It would have to be, well, very significantly
17		contaminated, yes.
18	Q	And let's talk about a couple of examples. Could
19		the presence of blood in seminal fluid give the
20		appearance, or lead to a yellowish appearance?
21	А	It could. If you dilute blood down, it's sort of
22		pink, the pink sort of fades away. It can look
23		very slightly yellowish with a white background
24		and strong light, but very difficult I mean, by
25		the time there's any suggestion of yellowness,
	li .	

1		it's just about become imperceptible completely,
2		so the sort of degree of yellow which you would
3		get to, I can't imagine you would notice that in
4		snow.
5	Q	Okay.
6	A	You would have to really look at it with a white
7		background, a clean, white background.
8	Q	Are we to read when we read this paragraph
9	А	There is another actual confounding bit, you know,
10		when things crystalize or become finally divided,
11		they turn white, it's an optical effect. I mean,
12		if you take blue glass and you powder it up
13		finely, it's virtually not blue any more, you've
14		got sort of whitish powder.
15	Q	Okay. I want to take you back to this paragraph,
16		and have I heard you correctly then that the way
17		it should read when you say, "Seminal fluid is
18		translucent white in colour so this could not have
19		been seminal fluid," what you are stating there is
20		that pure seminal fluid is translucent white in
21		colour, so this could not have been pure seminal
22		fluid?
23	A	No, it couldn't have been pure seminal fluid,
24		that's for sure.
25	Q	But you've acknowledge that the yellowish
		<b>4</b>

1		appearance could have resulted from contaminated
2		seminal fluid?
3	А	It could result from contamination, yes. The most
4		likely contamination which is very common, as I've
5		said, is urine.
6	Q	Okay.
7	А	A high dilution with urine.
8	Q	Okay. I'm going to continue on, the next
9		paragraph says:
10		"When seminal fluid is frozen it becomes
11		opaque and as crystal white as snow. On
12		5th June, 1990, a sample specimen of
13		seminal fluid from this laboratory, was
14		frozen on some snow and photographed
15		in white light and in ultra-violet
16		light."
17		You go on to indicate who was aware of the
18		testing and that copies were provided, copies of
19		the photographs were provided and included were
20		colour chip charts. And again, was this testing
21		or photographing done with pure seminal fluid
22		samples?
23	А	Yeah, it was done with a seminal fluid sample
24		which I personally examined and I think the count
25		on it was 117 million per cubic millimeter. I did

1		microscope it, no red cells present. Did test it,
2		no peroxidase reaction. I've never tested seminal
3		fluid with a hemostix before, I didn't think
4		anybody else had, but still well, obviously
5		they had, so I did it.
6	Q	Okay. So that was pure seminal fluid that you
7		were using though?
8	A	Yes.
9	Q	Okay. To the next paragraph:
10		"This laboratory also examines
11		approximately 65,000 specimens of urine
12		each year. The finding of spermatozoa,
13		in both male and female urine is very
14		common. Over 10 percent of out-patient
15		urine specimens contain spermatozoa."
16		And you are speaking of human urine here;
17		correct?
18	Α	That's the only type of patient we treat, yes.
19	Q	Okay. Then going down to the next paragraph:
20		"The "yellowish frozen
21		substance/yellowish liquid" could only
22		have been urine which contained
23		spermatozoa. There is <b>no other</b>
24		yellowish body fluid which contains
25		spermatozoa."
	I	

		r age 220 re
1	A	Yes.
2	Q	And are you comfortable with that conclusion?
3	А	I am comfortable with that conclusion. I know of
4		no other yellowish body fluid which could contain
5		seminal fluid. I mean, joint fluid is sometimes
6		yellowish.
7	Q	But just
8	A	So is cerebrospinal fluid, but I can't conceive of
9		how you would get spermatozoa into a joint or into
10		somebody's brain, so, you know, as far as I'm
11		concerned, urine is the only possibility which is
12		common.
13	Q	But you've agreed with me previously, haven't you,
14		that contaminated seminal fluid could give the
15		yellowish appearance, and I mean contaminated not
16		with urine, but contaminated otherwise, could give
17		the appearance, or the yellowish appearance?
18	A	Well, there are obviously yellow things which you
19		could put in it. I mean, it wouldn't be, shall we
20		say, natural or normal contamination, I mean, it
21		would be deliberate contamination that would cause
22		it to be yellow.
23	Q	I mean, I'm just, I'm wanting to test you a bit on
24		the certainty of your conclusion here. You seem
25		to state it quite aggressively and perhaps, and if

Д

I'm misphrasing that you can let me know, but we know that the scene, that four days had passed before this substance was located. We don't know, I guess, what went on at the scene necessarily, but I assume in scientific terms we can assume that there was the chance for contamination of varying sorts, and I'm wondering if you could eliminate contamination in this circumstance as being a possible source of the yellowish appearance?

I suppose if you want to go to a thousand and one against or greater, you know, no, you couldn't. don't think it really matters a great deal pursuing this. There are other problems with testing for antigens in the presence of a high delusion with urine, so, you know, we're getting into an awkward situation. We've got a positive result, which I don't believe was true, so would blood possibly have interfered? Well, it might have interfered with the true result, but since I think it's a false positive result, I mean, though it interfered -- well, it didn't interfere with getting a false positive result because -- the logical sequence is getting a little difficult for me to follow.

	1	
1	Q	No, and I'm much further behind than you, but if
2		we look at that first sentence, the yellowish
3		frozen substance/yellowish liquid could only,
4		you've bolded only, contain spermatozoa. From
5		what I've heard from you over the last few
6		minutes, it doesn't sound like that would be an
7		accurate statement?
8	A	Well, I've diluted it with one part in a thousand
9		of doubt shall we say, right.
10	Q	Okay. And of course we can't measure the
11		contamination possibilities
12	А	No, we can't.
13	Q	I just want to know if there are contamination
14		possibilities outside of urine which could have
15		given seminal fluid a yellowish appearance, and I
16		think I've heard you say that, I think you are
17		saying it's very rare, but that that could happen?
18	A	Yes, I would concede that is highly improbable,
19		but possible.
20	Q	And I think because you are saying that the most
21		likely source of a yellowish substance, including
22		in a contamination scenario in the circumstances
23		that we're aware of, would be urine and, in
24		particular, dog urine?
25	А	Well, yellow stains in snow, actually they are

Page 22052 1 quite common around where I live, I think they are dog, and in fact I've seen some of the dogs doing 2 3 it and I try to discourage them from doing it 4 shall we say. 5 Q The next paragraph talks about how 6 spermatozoa can leak into dog urine, and I think we've talked about that, and you confirmed that 8 that was a possibility. If we go on to point 2, 9 it says: 10 "The presence of the A-antigen in the "yellowish substance": 11 12 There is no indication in the transcript 13 that the possibility was considered that 14 this "yellowish substance" was urine 15 containing spermatozoa. Scanning 16 spectrophotometry would have undoubtedly 17 shown absorption bands consistent with

colour.

18

19

20

21

22

23

24

25

that this was indeed urine."

And the question I had for you, in terms of the scanning spectrophotometry, was that something that, a test that was available in 1969, for

urochromogens, the biological pigments

thereafter would easily have confirmed

in urine which impart the characteristic

Simple chemical analysis

1		example, in Regina?
2	A	Yes. We had a very good double beam scanning
3		spectrophotometer at the Regina Grey Nuns
4		Hospital, it was in the chemistry department, and
5		anybody in the other areas, you know, we shared
6		equipment in common, so yes, it was not only
7		available, but we had an extremely good one there.
8		Now, I do not know what equipment the RCMP had
9		available. Maybe they didn't have a scanning
10		spectrophotometer, maybe that's why they used the
11		tests they used.
12	Q	Okay. But that scanner would have been available
13		in 1969 and you are simply stating that we don't
14		know whether the Regina lab had access to that
15		equipment?
16	A	No, I don't know.
17	Q	Okay.
18	A	Personally I think, you know, they should have had
19		access to it, but, you know, that's none of my
20		business
21	Q	Okay. And you state
22	A	what they are equipped with or not equipped
23		with.
24	Q	You state:
25		"Simple chemical analysis thereafter
	1	

1		would easily have confirmed that this
2		was indeed urine."
3		And again, just to ask you a couple of questions,
4		you don't know at this point when you are writing
5		this report, do you, conclusively, that the
6		substance that you are considering was urine?
7	А	No, you know, I considered that is an extremely
8		strong probability, so now we do some simple
9		analysis to document and prove it is, right.
10	Q	Okay.
11	A	But it wasn't done.
12	Q	No. You are saying it wasn't done originally in
13		terms of proving that conclusion?
14	A	No.
15	Q	Okay. And you of course wouldn't be able to
16		conduct those tests to prove that conclusion
17		without having the substance?
18	A	Well, no, you can't analyse something if you
19		haven't got it.
20	Q	And if we go to the next page, at the top you
21		state:
22		"This is a very serious oversight since,
23		if one is examining a body fluid under
24		the impression that it is one thing
25		whilst in reality it is something else,
		<b>4</b>

1 inappropriate test procedures may be 2 employed and anomalous results may be 3 obtained which would lead to 4 misinterpretation of this original 5 sample. 6 This cautionary comment applies to this section and to the following 8 sections of this report." 9 And you felt these comments, I take it, were 10 important in the context of your report? 11 Α Yes. 12 Q Okay. If we move down the page --13 Α Are we going to get into that area again? 14 I'm going to take you to the --15 Well, you know, we can go all through the sort of Α 16 complicating problems which exist in that area if 17 you like. 18 I think we've been covering them and I'm hoping Q 19 that we continue to cover them as we make our way 20 through your report, because I'm assuming you 21 considered most of these aspects in your report, 22 we still have several pages to go, so let's see if 23 we hit them as we make our way through, and then 24 if there's anything left over we can discuss that, 25 but down the page, still talking about the

presence of A-antigens, you indicate:

"The A-antigen is present in the urine of A-antigen secretors but, may also be present in small quantities in the urine of non-A-antigen secretors by a non-secretory mechanism. The A-antigen is not limited to red blood cells and is found associated with all body cells.

When such body cells slough-off in the normal process of replacement they carry the A-antigen with them, e.g. into urine and faeces."

I think I follow that, and the only question I really had in relation to that is whether that applied similarly to semen. Can the sloughing-off process lead to A-antigens in seminal fluid in the same way as you've described it occurring into urine and faeces in a non-secretor?

Not anything comparable. Kidneys have an enormous surface, the gut has an enormous surface area and you are getting cells shed off. When you are looking at salivary glands and prostate gland, nothing like the same order of magnitude.

Q Okay.

		•
1	A	I mean, the only way that, you know, the surface
2		epithelium of gut gets replenished, it grows up
3		and the surface is sloughed out with faeces.
4	Q	Okay. So and in summary then, in simple terms
5		in this paragraph, you are saying that in the
6		urine of an A-antigen secretor and in the urine of
7		an A-antigen or a non-secretor, you may still
8		find A-antigens?
9	A	If you use enzyme labelled immunosorbent assay,
10		you may very well find A-antigen in a
11		non-secretor.
12	Q	Okay.
13	A	But if you use an agglutination inhibition
14		technique, no, you wouldn't.
15	Q	Okay.
16	A	I mean, it is the same as glucose in urine, if you
17		use an ultra-sensitive technique, you will find
18		traces of glucose in everybody's urine, but
19	Q	If you can please keep your voice up, Dr. Merry,
20		just for the reporter's sake.
21	А	You will find traces of glucose in everybody's
22		urine if you use ultra-sensitive analytical
23		techniques. However, for clinical analysis, you
24		do not find it in normal urine.
25	Q	Okay.

1	A	The level of sensitivity is deliberately kept
2		above the normal level.
3	Q	Okay.
4	A	I mean, technology is such that we can now detect
5		the normal or irrelevant, so you sort of put your
6		testing procedure into the relevant range.
7	Q	Okay. And of course I want to concentrate on what
8		you are stating here in your report in March of
9		1992 and if we move to the next paragraph it
10		states:
11		"Neither is the A-antigen limited to the
12		human species. It is found in many,
13		diverse life forms, from the simple
14		forms of bacteria and moulds to the
15		higher life forms of plants and
16		animals."
17		And would I be correct then and actually I'll
18		skip down to the bottom of the page:
19		"The "yellowish substance" which was
20		undoubtedly urine containing spermatozoa
21		would inevitably be contaminated with
22		micro-organisms which may well have been
23		the source of the A-antigen detected.
24		Microbiological cultures of the
25		"yellowish substance" should have been

1		undertaken to ascertain if
2		micro-organism producing "A-antigens"
3		were present."
4		And again, if I was to state this in simple
5		terms, was this simply a further explanation for
6		why A-antigens may have been detected in the
7		yellowish substance?
8	А	Well, there are all sorts of possibilities. I
9		should, at the time I wrote that, perhaps also
10		added that they should have tested that
11		micro-organisms were not present which were
12		producing even agglutinin, an agglutinin which
13		would clump all types of red cells regardless of
14		their actual grouping, because then we are going
15		to get into agglutination inhibition techniques
16		and
17	Q	No, but my question for you, Dr. Merry, is this
18		was another source you are referring to here of
19		A-antigens in the yellowish substance, another
20		potential source?
21	А	That's another potential source of that and the
22		presence of agglutinins themselves would also
23		produce a false positive result.
24	Q	Okay.
25	А	So we've got another bit to add into that.

Q	Okay. You continue on:
	"There's <b>no evidence</b> in the transcript
	that this was either thought of or done!
	There is a further problem: That
	approximately 50% of the dog population
	possesses the Tr antigen which
	cross-reacts with the human (blood
	group) A-antigen.
	And I think we've talked about that, and again in
	simple terms you are indicating this could again
	be another potential source of the A-antigens
	that were detected in the yellow substance?
А	Yeah.
Q	Okay.
А	All we have is we think most likely that's it. No
	scientific proof here, just most likely.
Q	And just a general observation, I know that you've
	used bolding and exclamation marks through
	portions of your report, and it might be obvious,
	but what was the intent of bolding certain words
	and using exclamation marks in various locations?
А	Well, they were mainly to sort of highlight things
	which should have been considered at the time. I
	mean, trying to analyse this, I wouldn't have been
	able to do it, it's too complex and the technology
	A Q A

1		was not such that I could have done it; that is,
2		if you appreciate the complexity of what you were
3		dealing with.
4	Q	Okay. The next sentence:
5		"Obviously, the "yellowish substance"
6		which tested positive for the A-antigen
7		could have been and, probably was, dog
8		urine."
9		This next portion I don't, I'm not going to read
10		all of it, and I don't mean to cut it short, Dr.
11		Merry, but it's the next three paragraphs and if
12		they are important, please let me know. I think
13		what it is was that it was another explanation
14		for why there may have been an A-antigen positive
15		test result and you are questioning I think the
16		testing procedures that may have brought about
17		that A-antigen positive result?
18	А	Yeah. Well, the question of negative controls,
19		non-specific binding, you know, I would have to
20		have the exact documentation of the procedure
21		which was performed.
22	Q	Okay.
23	A	Which I didn't have, and I, you know, I can't even
24		say if it was done or not.
25	Q	Okay. If I move you to the next page, page 7,
		1

there's a new heading, "The positive test for blood in the yellowish substance," and you indicate:

"I have read Dr. Peter H. Markesteyn's report of 4th June, 1990 and agree with his comments in this regard. I would only add that in the specimen of seminal fluid from this laboratory which was used in the photographs was examined microscopically for the presence of red blood cells and none were found. performed a "Hemostix Test" on this specimen, which is totally inappropriate but, was done in view of the special nature of this case, and the result was negative. Other random seminal fluid specimens were also tested for comparative purposes and it was found that fresh seminal fluid specimens may test positive or negative initially, but all test positive if tested later, due to the liberation cytochromes from the spermatozoa."

And was this what we spoke of earlier on, Dr. Merry?

1	A	Yeah, that's what we spoke of later on, earlier on
2		rather. I guess that should be qualified, if a
3		guy has had a vasectomy and he hasn't got any
4		spermatozoa, obviously we're not going to get
5		positive results, but
6	Q	Okay.
7	A	But I know guys who have had a vasectomy and they
8		are now totally infertile.
9	Q	Okay. Well, moving on,
10	A	It might take three to six months to become
11		totally infertile, but
12	Q	Okay. I'll move you on to the next paragraph, and
13		I think we've covered this as well, but we'll just
14		recap it:
15		"A wildly speculative hypothesis was
16		advanced at the trial, which is
17		scientifically untenable; namely: to
18		explain how Mr. Milgaard, who was
19		incorrectly determined at the time to be
20		a non-secretor of the A-antigen, could
21		have produced the yellowish substance
22		which contained the A-antigen!
23		I agree with the opinion of
24		Mr. Brian Jay and Dr. Peter H.
25		Markesteyn that it is <b>not possible</b> that
	I	

1		the explanation could be that the
2		A-antigen was present as the result of
3		blood contamination of blood group A in
4		so little quantity that it gave a
5		<pre>positive Hemastix (benzidine/peroxidase</pre>
6		reaction) <b>but not</b> a positive
7		haemochromogen reaction."
8		And, again, is this what we spoke of earlier?
9	А	Yeah, that's what's yes, it is.
10	Q	So in those circumstances I think you had
11		indicated that and I can't remember your words
12		exactly but the A antigens would almost
13		certainly not be accounted for by the presence of
14		blood?
15	А	Yes.
16	Q	Was that sorry?
17	А	Yes, that's correct.
18	Q	Okay. If we move to the next page, 155555, at the
19		bottom of the page, point number 4, it states:
20		"Is there any evidence that the
21		yellowish substance was of human origin?
22		Dr. Peter H. Markesteyn has
23		already dealt with this in his report.
24		I would repeat my cautionary comment:
25		that it is absolutely critical that one
		4

the body fluid under examination!  specific test was performed (prob	<b>If</b> a
A modinitin modeling that time	ably a
4 precipitin reaction at that time)	on the
yellowish substance (undoubtedly	urine
6 containing spermatozoa); the	
7 possibilities of spurious results	are
8 such that any conclusions would b	e open
to grave doubt. If there was any	human
10 protein present in the <i>yellowish</i>	
11 substance it should have been	
12 concentrated and purified by gel	
filtration in a Sephadex column	
14 (cross-linked dextran) <u>before</u> any	such
15 test was performed. It would see	:m
likely that <b>if</b> this had been done	that
it would have been remembered and	L
18 recorded in the laboratory record	l."
And would I be correct, at this point in t	ime,
you were not in possession of the original	
21 laboratory record; is that correct?	
22 A No, I was never in the possession of any o	riginal
laboratory records.	
Q Okay. And I note again in this paragraph	and,
Dr. Merry, forgive me if I'm dwelling on i	.t

1		unduly but you seem very certain, although you
2		haven't examined the substance obviously, that
3		that substance was urine containing spermatozoa.
4		I guess all I can ask you is if you are
5		comfortable with your commitment on that aspect?
6	А	Well I have seen urine which contained spermatozoa
7		personally, and through the laboratory we have had
8		so many cases that this is very common, and I
9		can't think of any other circumstances in which
10		you can get spermatozoa in something which looks
11		like urine. I just can't think of what it would
12		be. Now that is not a satisfactory scientific
13		position. Somebody should have undertaken simple
14		analysis to determine that it was urine. Now that
15		is as close as we're going to get to it from a
16		scientific point of view.
17	Q	So fair to say you don't know whether it was urine
18		or semen?
19	А	It definitely had seminal fluid in it. That's the
20		only source of spermatozoa. I can't think of
21		anything else, other, for the rest of it apart
22		from it being urine.
23	Q	Okay. And I don't want to venture back too
24		deeply, but there again, we had talked about
25		contamination, and have I heard you correctly
	li .	

1		that, yes, contamination could have been another
2		explanation outside of urine?
3	А	It could have been. Probability factor, highly,
4		very highly unlikely. I can't put a figure on it,
5		but it, it wouldn't really occur to me unless
6		somebody suggested it to me, shall we say,
7		repetitively and forcefully.
8	Q	So, so but this is all am I correct that
9		your position on this is coming solely from the
10		descriptor of this substance as yellowish?
11	A	Well, it's not just been described by one
12		individual, you know. They have got me convinced
13		that this was a yellowish substance all right,
14		yes, from that descriptor.
15	Q	Okay, and we're going to look at that in just a
16		moment, what the actual descriptions were. Just
17		on the next page, it's your the last page of
18		the report, number 5:
19		"Red blood cells in normal human seminal
20		fluid (Dr. Harry Emson's testimony):
21		Here again I agree with Dr.
22		Peter Markesteyn's comments in his
23		report of all the <b>thousands</b> of
24		seminal fluid specimens examined in this
25		laboratory and, in <u>four</u> other

1 laboratories with which I have been 2 associated, I can only recollect red 3 blood cells being found on perhaps 3 or four occasions!" 4 5 Α So --And this goes back of course, I believe, to Dr. 6 0 Emson's testimony at trial -- and I'm paraphrasing -- but which effectively indicated, 8 9 in his view, that it was common to find red blood 10 cells in the seminal fluid of young men. 11 Α Yeah. 12 Q And I take it by this statement, and based upon 13 your knowledge, you would have disagreed with that 14 comment or position? 15 Umm, probably in the majority of cases in Α 16 which you do get red cells in seminal fluid, which 17 is rare, you don't actually ultimately find a 18 cause. It's probably some very minor vascular 19 abnormality, one always has to consider the 20 possibility it might be associated with neoplasia, 21 cancer of prostate, seminal vesicles, something of 22 that sort. Fortunately, that is virtually unheard 23 Probably the commonest cause is acute injury 24 to the genitalia which may result in transitory 25 presence of red cells. That also takes it into a Meyer CompuCourt Reporting =

1		clinical situation. Those with acute injuries,
2		recent acute injuries to genitalia, are unlikely
3		to be wandering around the streets looking for any
4		sort of sexual activity, should we say.
5	Q	Okay. So let's go back to the position and
6		hopefully I've fairly stated it but if Dr.
7		Emson had stated that it was common to find blood
8		in the semen of young men
9	А	Well, he didn't say how common it was. This is
10		why I object to, you know, the use of "common". I
11		mean if I say something is common, what do I mean
12		by "common" within my experience?
13	Q	Well, let's just try our best and use "common" as
14		best we can for a moment, and bear with me.
15	А	Well you better not use it, aren't you, unless you
16		are prepared to give a figure attached to it.
17	Q	Let's say 6 out of 10 circumstances equals common;
18		would you agree with Dr. Emson's position on his
19		comment that blood is commonly found in the semen
20		of young men?
21	А	Well if you are taking 6 out of 10 or even 4 out
22		of 10, no.
23	Q	What would it be out of 10?
24	А	I would think nil.
25	Q	Okay.
	Ĭ	

		- Fage 22070
1	А	You know, in about 15,000 I happened to have seen
2		it perhaps three or four times.
3	Q	Okay.
4	A	I mean
5	Q	Wouldn't it be
6	A	I'm not going to say it's common, I'm not going
7		to say it's rare, I just said 15,000 and three or
8		four.
9	Q	Fair enough.
10	А	Well, that's it. And any other pathologist who
11		handles that volume would have also seen it, so
12		within our experience, it's common.
13	Q	And would what you have just described for me, at
14		least from your perspective, have been known in
15		1969?
16	А	Well yes, I mean it would not have changed over
17		the ages, I mean this is very basic factual data.
18	Q	Okay. So would it be fair to say, at that point
19		in time, that out of 15,000 specimens you might
20		expect to see three or four occurrences?
21	А	Well, you are getting into statistics. Maybe I
22		happen to have a sample which wasn't
23		representative, maybe it should have been 30 to
24		40.
25	Q	Sorry, I only used 15,000, I thought you had

1		mentioned that number, and if I'm wrong I'm sorry.
2	А	Well no, 15,000, we'll use that number, three or
3		four. So perhaps the sample I happened to have
4		had might not have been representative, all right,
5		let's multiply it by ten, 30 to 40. Well, okay,
6		we've got 30 to 40 in 15,000, well, common? Up to
7		you to decide, isn't it.
8	Q	And but back to my question; is that what you
9		would expect and I know that that's the
10		difficult question to answer but is that about
11		what you would expect in 1969?
12	A	Well, that's what I would expect in 1969, it's
13		what I would expect now.
14	Q	Okay. And just to confirm, I have no questions
15		arising from the report, doctor, there are no
16		further questions. This report was filed on the
17		case on reference, and I don't have actually the
18		volume reference but I will be able to obtain that
19		for the Commission.
20		COMMISSIONER MacCALLUM: The Supreme Court
21		hearing?
22		MR. HARDY: Sorry?
23		COMMISSIONER MacCALLUM: The Supreme Court
24		hearing?
25		MR. HARDY: Yes, that's right. I believe

it's -- well, I'm only going to start guessing,
so I won't.

## BY MR. HARDY:

Q

Dr. Merry, I want to bring your attention to sort of what we know now today. And some of this information was available in 1969-1970, some of this information was available but you did not have during your work, and some of it has come out in testimony during this Inquiry, and I want to just review some of it with you briefly and see if it would have impacted any of your opinions as we have been reviewing them. And the first aspect is the appearance of the substance. We have been calling it "yellowish" throughout, and I took a review of the transcripts, and you've mentioned that it's Lieutenant Penkala and Staff Sergeant Bruce Paynter who described the substance, and And at trial, just for reference that is correct. sake, indeed Lieutenant Penkala describes it as yellowish, he described finding yellowish frozen lumps of snow or yellowish frozen lumps of some substance; Staff Sergeant Paynter described it as pale yellowish or clearish, and at another time he described it as pale yellowish, very pale And I'm wondering, it seemed you were yellowish.

1		working from the position that the substance was
2		yellowish, would these other descriptors that I
3		have just mentioned to you have affected any of
4		your opinions or conclusions as you've expressed
5		and as we've reviewed thus far?
	7	
6	A	No. They all, you know, thought it was yellow in
7		some manner, urochromogen pigments are yellow.
8	Q	Okay. But I'm asking you to and I'm not saying
9		you are wrong on that we have the yellowish
10		description by Lieutenant Penkala, we have a pale
11		yellowish or clearish description by Staff
12		Sergeant Paynter,
13	А	Yeah.
14	Q	so let's take one of those, let's take the
15		clearish description. Would I be correct that, if
16		the substance had been described to you as
17		clearish, you would not have thought of the
18		possibility that the source of the substance was
19		urine?
20	А	Umm, urine, some urine is crystal clear, some
21		urine is so turbid you can't see through it, I
22		mean but that's pathological, admittedly, but, you
23		know, the clearness of the urine has nothing to do
24		with whether it is urine or not.
25	Q	I agree with you, but let's just, let's be fair

1		for a moment. If someone had come to you and
2		asked you to consider a substance and the serology
3		of that substance and described the substance to
4		you and it was given purported to be seminal
5		fluid, and it was described to you as clearish,
6		could you have
7	A	Well, if it was described as clearish
8	Q	Sorry, just let me finish my question.
9	A	it ain't seminal fluid, because seminal fluid
10		is not clearish.
11	Q	Would you have suspected, if that was the
12		descriptor, that the substance was urine?
13	A	Now it's got to be clear and it's got to be
14		yellow, has it?
15	Q	No, I'm asking you, if it was described to you as
16		clearish would you have suspected that it was
17		urine?
18	А	It is still highly probable it's urine, yes.
19	Q	So I guess what I'm saying is if, in 1990, Peter
20		Markesteyn had asked you to assist him in
21		determining the serology surrounding a sample of
22		substance which purported to be semen, and it was
23		described to you as being clearish, are you
24		telling me that one of the first thoughts you
25		would have had was that this substance may, in

		——————————————————————————————————————
1		fact, have been urine?
2	A	Yes.
3	Q	Okay.
4	А	And my first thought, well my thoughts before
5		embarking, if I had had the specimens to do
6		anything with, is I have to do preliminary testing
7		on this to find out what I'm proposing to analyse.
8		If I don't do that, umm, I can't correctly well
9		I can't select appropriate tests, and I can't
10		correctly, I can't correctly interpret the
11		results.
12	Q	And was it not the yellowish descriptor, though,
13		that led you to think that it was urine?
14	А	I still have a strong suspicion, if you see
15		something yellow in snow or down a toilet, it's
16		probably urine.
17	Q	And would you have had the same strong suspicion
18		if the substance had been described to you as
19		clearish?
20	А	Yes.
21	Q	Okay. And I think we've talked about the
22		descriptor pale yellowish as well, and can semen
23		that is contaminated with blood appear pale
24		yellowish?
25	А	Umm, I would hardly think so. If you want to
	Ĭ	

1		stretch the limits of probability, all right, well
2		I guess we could say "yes", but I doubt whether
3		it's within anybody's experience, but still
4	Q	Okay. So I think overall I'm hearing you,
5		notwithstanding some of the descriptors I told
6		you and in fairness still including the
7		yellowish descriptor by Lieutenant Penkala that
8		none of that information would have changed any of
9		your opinions or thoughts on this matter as you
10		have expressed and as we have reviewed?
11	A	That is correct. I am left in the position, umm,
12		there are possibilities of what things might be, I
13		don't know, and I wouldn't have embarked on any
14		sort of analysis until I had found out exactly
15		what I was dealing with and knew all the problems
16		associated with it in selecting the tests and
17		interpreting it.
18	Q	And I hear that from you, and it sounds like a
19		reasonable approach, but it and but it
20		doesn't seem to fit, though, with your conclusions
21		in your report that's that read to me as if you
22		were deciding that it was most probably urine.
23		And perhaps that's just how I'm hearing you, but
24		it that doesn't seem to fit the cautionary
25		approach you are suggesting in terms of knowing
		4

1		what substance you are looking at?
2	А	Well, I mean, I dealt with what was done. I could
3		have taken the position it was totally
4		inappropriate to have done this lot without doing
5		preliminary testing to find out exactly what you
6		have got and selecting your test procedures fully
7		aware of all the problems associated therewith.
8	Q	Okay.
9	A	But I tried to give an assessment with what has
10		was done, which shouldn't have been done without
11		this preliminary work to know what they were
12		analysing.
13	Q	Okay. And I think we've covered it and you were
14		comfortable with your conclusions on that basis.
15	А	I mean I guess I sort of deserve to get into some
16		sort of problems. If I comment on something which
17		was invalid and I don't believe should have been
18		done, you know, I'll get myself into problems
19		trying to criticize it or analyse it. I mean, it
20		shouldn't have been done, period.
21	Q	Okay. Let's consider another aspect, which some
22		of this information was available at the original
23		trial, and I'll give a summary again for you, and
24		we'll refer to a couple of documents just for
25		confirmation. But Lieutenant Penkala, who located

1	the frozen substances, reported that he had found
2	hair in the substances, the hair was sent to the
3	laboratory along with the substance and was tested
4	by a Mr. Molchanko or Corporal Molchanko, and he
5	had concluded that there were seven human pubic
6	hairs in the yellow substance that we have been
7	speaking of, in the vial that ultimately tested
8	positive for the A antigens, etcetera. And just
9	to refer you to a couple of documents, we have
10	them for reference sake and you wouldn't have
11	had access to these documents obviously, Dr.
12	Merry, when you were conducting your work but
13	if we turn to 084974 you will see it's a letter to
14	the lab enclosing a number of exhibits. Exhibit
15	is identified as:
16	"two plastic vials of unknown yellowish
17	substance",
18	as we have been talking about:
19	("in frozen state)".
20	And if we can turn to the next page, point number

And if we can turn to the next page, point number 9, the request from Lieutenant Penkala to the lab is to:

21

22

23

24

25

"Examine Exhibit "I" (two plastic vials of unknown substance) for the presence of spermatozoa, and establish whether it

1	is of human origin. Examine hair in
2	this sample to determine nature of the
3	hair (pubic, etc.)".
4	And then if we move forward to the actual lab
5	report, which is 105544, again Exhibit I is
6	noted:
7	"two plastic vials of unknown yellowish
8	substance (in frozen state)".
9	If we move to the next page, point 5, Purpose:
10	"Examine the hair in Exhibit "I" (two
11	plastic vials of unknown substance) to
12	determine the nature of the hair (pubic,
13	etc.) and whether it has any similarity
14	to Exhibits "J" and "K"."
15	And then at the bottom of the page, under Data,
16	it states:
17	"The hair from Exhibit "I" vials was
18	examined and compared microscopically
19	with the hair samples, Exhibits "J" and
20	"K"."
21	And then if we move to the next page, under
22	Conclusion, Corporal Molchanko states:
23	"Six human pubic hairs were removed from
24	one of the vials from Exhibit "I".
25	These hairs had characteristics which

1 were similar to those found in the human hair sample, Exhibit "J" (control sample 2 3 of pubic hair from victim). A common 4 origin is possible." 5 And just one other reference. Corporal Molchanko's original notes, what we believe to be 6 his original notes -- he has not testified -- but if we turn to 249782, again, what we understand 8 9 to be notes from Corporal Molchanko. If we turn 10 to 249790 of that document the note he has written under Conclusions at the bottom: 11 12 "Seven human pubic hairs were removed from one of the vials from Exhibit "I" 13 14 (P-13). These hairs had characteristics 15 which were similar to those found in the 16 human hair sample, Exhibit "J" (control 17 sample of pubic hair from victim). A 18 common origin is possible." 19 Next page, he goes through the descriptors of the 20 hair, I just note the bottom: 21 "General human hair pubic". 22 And then he also confirms I2, which is the other 23 vial: "No hairs found." 24 25 And his testimony is quite straightforward,

simply stating that pubic hair was located. In fact, the evidence relating to comparison with the control sample from the victim wasn't allowed.

But I'm wondering, just in terms of knowledge of the existence of these seven human pubic hairs in the yellow substance which you had been asked to consider in later years, would knowledge of the fact that these pubic hairs were present with that substance have had any impact on your conclusions or opinions as we've reviewed?

Umm, yes, it would. If it is scientifically validated they are human hairs, and pubic hairs at that, well it would be reasonable to assume that they were associated with this yellowish substance containing spermatozoa, which you could then postulate, I suppose, reasonably, that if there's human hairs in it, it's human.

O Okay.

Α

Α

You don't have any direct test for that. I do

not -- I am not an expert of hair, identifying

whether it's human or not, and if it came from one

human or more than one human, or if it's the same,

I don't know. If you assume that yes, it's human

1		hairs in it, pubic hairs, so they have something
2		to do with it, so we don't know what the A antigen
3		was, but we can let the dog off the hook, shall we
4		say. Right.
5	Q	Okay.
6		COMMISSIONER MacCALLUM: You used "it" and
7		I'm not sure to what you referred. "You could
8		then reasonably postulate that if human hair was
9		present it was human"; do you mean this, the
10		spermatozoa, the semen that
11	А	The yellowish fluid containing spermatozoa, yeah.
12		COMMISSIONER MacCALLUM: All right. Okay.
13		MR. HARDY: I see the time, Mr.
14		Commissioner, probably a good time to break.
15		COMMISSIONER MacCALLUM: Okay.
16		(Adjourned at 11:58 a.m.)
17		(Reconvened at 1:31 p.m.)
18		BY MR. HARDY:
19	Q	Good afternoon, Dr. Merry.
20	А	Good afternoon.
21	Q	Prior to the lunch break I was bringing to your
22		attention some information which wasn't available
23		to you when you were conducting your work in 1990,
24		some of which was from the original transcript,
25		and we had finished talking about the location of
		<b>1</b>

25

the pubic hair within one of the samples of yellowish substance found in 1969. portion that I want to speak with you about arises from some of the original lab notes by Staff Sergeant Paynter in terms of the tests that he conducted on the yellowish substance in 1969, and I'll turn your attention to document 082386, and these have been identified by Staff Sergeant Paynter in testimony here at the hearing as his original notes that he kept during his work on the exhibits relating to the Gail Miller murder, and if we turn to the next page, please, you'll see at the top he refers to the two vials of substance that we have been speaking of, in large part I1, the frozen yellowish substance, and he has some of his own notations in relation to that sample, and he explained those to us during his testimony, and the first one I'm going to bring your attention to is the plus sign beside the phos notation, and in testimony Staff Sergeant Paynter confirmed for us that what that indicated is that with respect to this particular sample, he conducted an acid phosphatase test and that that test was positive and he described that as a test for detecting seminal fluid, and first of all, is that your

24

25

Α

understanding of an acid phosphatase test, is it used for that purpose?

Acid phosphatase test, yes, it is used for that In a clinical setting, if a man has carcinoma of prostate with extensive bony metastasis, you can use a concentration of acid phosphatase as some sort of index as to how bad the condition is and how far it has progressed. It's a specific form of acid phosphatase. All enzymes have isoenzymes, that sort of variance. Now, acid phosphatases are active in acid pH and you have a great number of variance of those. those days, you know, they didn't have molecular biology, they were kind of crudely fractionated, and prosthetic acid phosphatase is heat and formal As I said before, formal refers to stable. formaldehyde, right, so -- but he said it was positive for phosphatase. That's fine. know if he sort of fractionated it and determined whether it was formal stable or not, but if it's seminal fluid, it's going to be formal and acid stable. An elevated phosphatase otherwise in another clinical setting you would have to differentiate because it might not be associated with carcinoma prostate, it might be associated

1		with Paget's disease or something else.
2	Q	Would this be an appropriate initial test at least
3		for the identification of seminal fluid in 1969?
4	А	It would be an appropriate test to apply to
5		identify well, seminal fluid, period, no
6		speciation.
7	Q	For any species?
8	A	No.
9	Q	So would I be hearing you correctly then that you
10		could, from everything else you've told us, apply
11		an acid phosphatase test to dog urine and
12		potentially get a positive result?
13	A	Yes. I've not dealt with dog tissue to any great
14		extent, so I have not done these sort of tests.
15		I've done it on human material, but not dog
16		material.
17	Q	Okay. And I guess the question would be would the
18		positive acid phosphatase test on this substance
19		eliminate the possibility that the substance was
20		dog urine?
21	А	No.
22	Q	Okay. And beside that you'll see the positive
23		micro, and again Staff Sergeant Paynter testified
24		at the Inquiry and advised that following the
25		positive acid phosphatase test on this sample, he
		Moyor CompuCourt Poporting

1		would have proceeded to examine the sample
2		microscopically and in so doing would have
3		identified spermatozoa and, in particular, human
4		spermatozoa, and I'm going to refer you just
5		briefly to what give me a moment, please if
6		we turn for a moment, please, to page 11017 of the
7		transcript from the Inquiry, I'll read this
8		portion to you, and again this is Staff Sergeant
9		Paynter testifying at this Inquiry, Dr. Merry.
10	А	Yeah.
11	Q	And it starts at this question:
12		"Q And so we see in terms of that first
13		area that you cut out of the panties, it
14		was negative, and in the second area, it
15		was positive on the phosphatase test,
16		and is that, as soon as you have the
17		positive phosphatase test is when you
18		would go onto microscopically examine
19		that particular item?
20		A Yes, it would.
21		Q And perhaps you can tell us about that,
22		what are you looking for on microscopic
23		examination?
24		A Is to identify the human spermatozoa

1		seminal fluid was present.
2		Q And I note that you describe it as human
3		spermatozoa. Was there a way to
4		particularly identify human spermatozoa?
5		A Yes. When you saw them in a
6		microscope, it was not difficult to
7		tell, to differentiate human
8		spermatozoa from other animal forms."
9		And would I be correct, I think we've talked
10		about this previously, but would you perhaps
11		disagree with that position?
12	А	I would disagree to an extent with that position.
13		I mean, I might try to tell human from an animal
14		species. The problem would be how do I know how
15		correct I am. I mean, unless somebody got the
16		answer and has submitted you all these specimens,
17		I have no means of knowing if I looked at 10
18		different specimens and try and say which were
19		human and which were dog, I have no means of
20		telling how correct I am, unless somebody actually
21		has the real answer. I mean, this has turned up
22		in other contexts like identifying hair as coming
23		from definitely one individual rather than two
24		separate individuals, they are very similar, but
25		now with DNA technology we know that what was

1		thought to be fairly reliable isn't, and in fact,
2		you know, there are a number of cases now under
3		legal review. I mean, I am very cautious in my
4		interpretation of things.
5	Q	And I know we touched on this previously, but
6		would it be possible, you've been speaking of your
7		own abilities and that is fair to state, and I
8		don't know if you can answer the question, but
9		would it be possible for an expert in this area in
10		1969 to distinguish microscopically between canine
11		sperm and human sperm?
12	Α	I cannot dispute that claim. I would say that I
13		would not attempt to do it.
14	Q	Okay. I turn you next
15	A	I mean, the other problem is if you consider the
16		ideal situation of fresh seminal fluid with
17		perfect morphology, that's one thing, but then you
18		have to consider what happens when it isn't fresh
19		seminal fluid, the morphology is degraded I
20		mean, we did, we had at the Health Sciences Centre
21		some people who were practiced as forensic
22		pathologists and they would sometimes have this
23		problem, not worrying about whether it was human

24

25

or not, but looking at it to be sure that they

could absolutely identify spermatozoa and this

wasn't some other artifact, and occasionally they would bring it to me, what do you think, you know, and then they sort of conned me into spending half, three-quarters of an hour looking at field after field until I could come up with the answer, yes, I have seen 10, 11 or whatever and I'm sure that they are spermatozoa, they are not artifact, so you have to interpret things within a context. The next area I want to speak to you about is testing that was originally done which led to, further led to the conclusion on the part of Staff Sergeant Paynter that the seminal fluid was of human origin. I'm again going to take you through some original materials which you would not have had access to during your work in 1990 and the first document is 084974 and we've seen this previously, again it's the letter to the crime lab identifying Exhibit I being the substance, unknown yellowish substance, that we've been speaking of, and if we move to the next page, please, I read this to you previously, the first portion of that entry indicated:

"Examine Exhibit "I" ... for the presence of spermatozoa, and establish whether it is of human origin."

1 And if we move on to document 084976, again the 2 lab report by Staff Sergeant Paynter in response, 3 the substances that we've been speaking of are 4 identified, and if we move to the next page, 5 under conclusions you'll note he states in relation to I1 that: 6 "Human seminal fluid, highly probably 8 from a "secretor" of Group "A" was found 9 in Exhibit: I1 - sample of liquid." 10 And again I'm focusing on the human aspect. When 11 Staff Sergeant Paynter testified at this Inquiry 12 he was asked some questions in relation to this 13 aspect, and I'll bring your attention to those, 14 Dr. Merry, if we could turn to page 11022, 15 please, and it states in the transcript: 16 "0 And can you tell us, I'm not promising 17 I'm going to understand, but can you tell us, briefly, what that particular 18 19 test involved? 20 The human, antihuman test?" 21 And he's speaking of conducting this test 22 generally speaking: 23 "О Yes? 24 It involved making an extraction of

the stain or a liquid sample of the

1		stain, we would then add to a portion
2		of that extract an antihuman globulin
3		that we obtained commercially from
4		Ortho Diagnostics and allow them to
5		sit overnight. If there was human
6		protein in the stain it would combine
7		with the antihuman globulin from the
8		material we put in it. The next
9		morning I would then test for the
10		presence of that added material, if it
11		had been tied up by the blood sample
12		being human blood I would not be able
13		to find the material I had added, and
14		that would tell me that it was human
15		blood.
16	Q	And would that have been a standard
17		test, then, used in 1969
18	A	That was
19	Q	for the purpose you have identified?
20	A	That was the test we used prior to and
21		long after 1969."
22	And if I	move forward, please, to page 11033,
23	just a s	ingle question and answer here:
24	"Q	Okay. And I think, then, you've already
25		answered this question, but the AH test

1		that you have been describing for us,
2		then, could be conducted on a blood
3		sample or on a semen sample; is that
4		correct?
5		A Yes, you used the same tests for both
6		materials."
7		And then the last piece of information I'll show
8		you, Dr. Merry, is again Staff Sergeant Paynter's
9		original notes, if we can turn to 082386, and the
10		second page of those notes, you'll see in
11		relation to the substances we've been talking of,
12		on this side of the page there's a positive AH
13		and that was the aspect that Staff Sergeant
14		Paynter was asked to comment on in the portion of
15		the testimony I just read to you. And are you
16		familiar with the antihuman test that Staff
17		Sergeant Paynter explained?
18	A	Yes, I'm familiar with it. Various variants of it
19		are used in blood bank technology.
20	Q	And would it be an accurate test for determining
21		whether a substance was of human origin?
22	A	Now we're going to get into some problems.
23	Q	Okay.
24	A	Ortho pharmaceutical company, I know them very
25		well, they have very prestigious research labs in

Raritan, New York. They produced this antisera for a specific purpose and it is licensed by the FDA for that purpose, all right, the federal department -- well, FDA, Federal Drug Administration. Now, in blood banking -- well, let's go back to the A situation. Now, they produce antisera for use in cross-matching for determining patient blood groups. To correctly determine group A, or even fractionate them into group A-1 and group A-2 we know that the Tr antigen cross-reacts with that human antisera. Well, for the application which it has been tested for and licensed for, Ortho aren't concerned about that, the FDA are not concerned about that, if you are cross-matching human blood who cares if it cross-reacts with a dog or a kangaroo, it doesn't matter, it's not relevant.

Q Let's come back --

1

24

25

So the same applies to antihuman serum, right, it is licensed for use in blood banking, it has not been either verified or licensed for forensic work, so whoever uses it for that purpose would have to conduct the quality assurance tests themselves and they might find that yes, this batch is specific and does not react with other

1		species, or they might find, yes, it does react
2		with other species, then they would have to use
3		tissue extracts of that other species to absorb
4		out the material in that antibody which was
5		cross-reacting.
6	Q	Are you suggesting
7	A	This is a common situation in manufacturing
8		antisera.
9	Q	Are you suggesting then that the antihuman protein
10		test that has been described by Staff Sergeant
11		Paynter, that the use of that test to determine
12		the origin of seminal fluid was not an endorsed
13		use of that test in 1969?
14	A	You would have to go back to Ortho pharmaceuticals
15		and ask them if it could be used outside well,
16		you would have to ask them exactly what testing
17		had been carried out on that, if it was indeed
18		suitable. It may have been or it may not have
19		been.
20	Q	You are not aware whether it was and you were
21		suggesting it was suitable
22	A	Well, if you compare it to anti-A antisera, we
23		know it's licensed for use in human clinical work.
24		They are not interested in what other species it
25		might cross-react with, it's irrelevant. I mean,
		Meyer CompuCourt Reporting ————————————————————————————————————

1		with the antihuman stuff, so long as it detects
2		human immunoglobulin on the surfaces of red cells
3		for comparability testing, that is the only
4		requirement. I mean, if you've got human donor
5		blood, it ain't going to have dog immunoglobulin
6		in its red cells is it, you didn't get it from a
7		dog.
8	Q	So you are saying it was an endorsed test for
9		determining that blood was of human origin?
10	А	No, it is endorsed for detecting human globulin
11		within specific limitations, within a very
12		specific context.
13	Q	Would you have concerns about how Staff Sergeant
14		Paynter used this test in this scenario that I've
15		just read to you to reach the conclusion that the
16		seminal fluid had a human origin?
17	A	Well, Dr. Markesteyn, I think he sort of referred
18		to this once, I think it was in one of David
19		Asper's letters. It's not up to me to give an
20		opinion on it. If the person does the test, it's
21		up to them to provide the data.
22	Q	So do you have any ability then to
23	Α	I can't say yes or no. It's up to the person who
24		did the test and the manufacturers of the antisera
25		to say yes, this was okay.
	ll .	<b>_</b>

		——————————————————————————————————————
1	Q	So this test may in fact have been okay for
2		purposes of determining human origin
3	A	It may well have been. On the other hand, a
4		particular batch might not have been.
5	Q	And you don't know
6	А	We don't know, and be sure of what you know and be
7		sure of what you don't know.
8	Q	Agreed.
9	А	A man I always trust second opinions from
10		people who occasionally say they don't know. If
11		they always say they know, I'm suspicious.
12	Q	So would it be correct then you can't offer us any
13		assistance in determining whether or not this was
14		a proper test for determining human origin?
15	А	It was the proper test. The verification of the
16		antisera is the responsibility of the person doing
17		it.
18	Q	Okay. So nothing to say that this result was
19		wrong in terms of his conclusions
20	А	Nothing to say that it was wrong.
21	Q	Let me finish, Dr. Merry. Nothing to say that it
22		was wrong in terms of his conclusion that this
23		result told him that it was of human origin?
24	A	That's right.
25	Q	Okay.
	ñ	

1	A	There are other problems. This is an
2		agglutination inhibition technique. The detective
3		system you use doesn't actually give you a
4		positive result identifying anything, it just
5		tells you that what was there in the antisera you
6		used, it's bound with something in what you were
7		testing in the seminal fluid, saliva or what have
8		you.
9	Q	Okay, fair enough.
10	A	But it's not fair enough when you are dealing with
11		urine. If you are dealing with urine, urine is
12		concentrated human well, human urine is
13		concentrated soluble excrement. It is very
14		complex.
15	Q	Well, let's talk about that for a moment if you've
16		brought it up. If the substance was dog urine and
17		the test was properly conducted, could you get a
18		positive result; in other words, a false positive
19		for the antihuman protein test when the substance
20		you are testing is dog urine?
21	A	If the antisera was absolutely specific for human,
22		no. On the other hand, since you are testing
23		urine, you maybe get non-specific binding which
24		would appear to give a positive result.
25	Q	A false positive?
		4

1	А	A false positive result.
2	Q	Okay. So the answer to that question then is yes,
3		it could be dog urine and you could end up with a
4		false positive result?
5	А	The answer to the question, you know, to quite a
6		number of questions is I don't know. That's it.
7	Q	Okay. I'll turn to I'm finished with that
8		portion of questions, Dr. Merry, and just a couple
9		of other things I wanted to cover with you. You
10		would have had an opportunity to review and
11		consider the original trial evidence and I was
12		going to bring to your attention the closing
13		address to the jury by the Crown. If we could
14		turn, please, to document 141905, and I don't
15		think you would have previously had the
16		opportunity to look at this document, Dr. Merry,
17		as it wasn't a part of the transcripts in the
18		initial state that I think you would have received
19		them, although that's some speculation on my part,
20		but in any event, it doesn't matter for purposes
21		of my question. Crown counsel deals with the
22		question of the serological evidence starting at
23		page 141936, and I'm not going to review all of

the serological evidence in his submissions and I

He goes through his thoughts on

this with you.

24

Α

want you to try and place your mind back at the point of time when you had also similarly considered the trial evidence as a whole on this aspect, and at the end of it, at page 141940 he concludes with the comment at the top of the page, which states:

"So I leave that phase of the matter by stressing again that while this part of the evidence does not, of itself, identify the accused, it most certainly does not eliminate him."

And would you, upon your review of the trial evidence, agree with that comment, Dr. Merry?

Yes, it doesn't identify him and it doesn't eliminate him. I guess one would have to ask the question, well, what does it do.

And perhaps that is the question, did it have -- and please expand on that, did it have value in terms of what you've identified for us?

No. I mean, all this bit we've been reviewing -well, I guess it landed in a difficult situation.
They determined he was a non-secretor, then they
go get this evidence, or -- well, I think it was a
false positive that his urine is positive as a
secretor, so they couldn't sort of take the

1 position, you know, we think this is totally 2 unreliable, we'll drop the whole lot because, you 3 know, you have to explore, well, how reliable is 4 it, so non-secretor, seminal fluid, looks like 5 secretor, you know, the defence would, I guess, claim that he's innocent, but I think -- well, we 6 know that he was a secretor, I suspected it when I 8 assessed the evidence, so we ended up he's a 9 secretor, so I'm satisfied we got that bit right. 10 I think the second bit of 11 there's evidence of secretion in the urine, I 12 think that bits wrong, so now we've gone from sort 13 of negative at the top and positive at the bottom 14 to positive at the top and negative at the bottom 15 as far as I'm concerned. 16 Okay. Q 17 This evidence, it would have been better if it had Α 18 never been produced at all. 19 0 Okay. 20 It has not contributed to anything and, as far as 21 I can see, it has not only confused some what you 22 might call medical experts. It seems to have been 23 very confusing all around.

questions that I have for you, thank you very

Dr. Merry, I think those are all the

24

25

much.

Q

My Friends may have some questions in cross-examination.

## BY MR. GIBSON:

Dr. Merry, my name is Bruce Gibson, I act for the RCMP, and in light of your comments in the last two minutes here with respect to the value that the evidence actually had and your views on whether it linked Mr. Milgaard to the offence or not, I might be very brief with you. But if you are patient with me, I'll try to scan my notes quickly, and see where I want to go first. All right.

I'm going to try not to refer to the transcript of evidence that Staff Sergeant Paynter gave at the inquest, and trust that you will take what I say as what his evidence is rather than belabour the point and go through lengthy transcripts. Staff Sergeant Paynter gave some evidence with respect to the testing that he did. He informed the inquiry in 1969 that he did a hemostix testing screening test, which gave him a presumption that there would be blood in the sample that he has tested, and we've heard your evidence on that and you indicated that that

1		hemostix test could give a presumptive reading of
2		there being spermatozoa or seminal fluid in a
3		sample; is that correct?
4	А	Well, umm
5	Q	And, again, I'm using the word "presumptive".
6	А	since spermatozoa I mean I'm conceding, yes,
7		they looked and they saw spermatozoa. I'm not
8		arguing with that. So they saw spermatozoa, which
9		were very dead, and because they were there you
10		would expect a positive peroxidase reaction. If
11		you didn't get a positive peroxidase reaction the
12		next most likely explanation would be your
13		hemostix have long since expired and aren't
14		working. Right.
15	Q	Now the other aspect of that was the hemostix test
16		would give a, could also give a presumptive test
17		that there could be blood present in the sample,
18		and you'd agree with that I believe? Again
19	А	I'd agree with that, yeah.
20	Q	it's all being presumptive. And Staff Sergeant
21		Paynter went on to give evidence that you would
22		then have to use a confirmation test, and he
23		mentioned the haemochromogen test, and again would
24		you agree that that's the type of testing that
25		would have been done to try and confirm, or should

1		have been done to try and confirm if there was
2		blood in that sample; correct?
3	A	Yeah, he talks about the haemochromogen crystal
4		test.
5	Q	Now would he
6	А	Now that is not what I would have used, but okay,
7		if it's positive that's fine.
8	Q	Maybe
9	А	On the other hand
10	Q	if I could just stop you there, Dr. Merry, so
11		we don't go down a path that we don't necessarily
12		have to go to. Mr. Paynter gave evidence that he
13		was not able to do a confirmatory test, being a
14		haemochromogen test, and therefore his evidence
15		was that he could not chemically or clinically, or
16		whatever, positively state that there was blood in
17		the sample that he had tested; does that make
18		sense to you? If you can't do a confirmatory
19		test, how could you say that it's blood, fair?
20	А	That is correct. And if you look at the
21		transcript, that's the sort of judge's instruction
22		to the jury, "there ain't blood there".
23	Q	Absolutely. And I'm going to move along along
24		that line. Staff Sergeant Paynter gave evidence
25		as well at the trial and at this Inquiry that
		4

1		there could be many reasons for a false reading,
2		that it could not be blood as well, there could be
3		some other reason for there to be a positive
4		reading on the presumptive test, on the hemostix
5		test, and I think he mentioned leather and some
6		vegetable matter and there was numerous others,
7		and he gave evidence to that effect. So, again,
8		would you agree with me that at the evidence at
9		trial it was pretty well established, as you
10		referenced the judge's comments, that there was no
11		confirmation that there was blood, necessarily, in
12		the sample that he tested?
13	A	That's right. Umm, presumptive test done, we have
14		one explanation already for a positive presumptive
15		test, if you try the test again and try to say
16		there's blood there who knows whether there is or
17		not.
18	Q	Now in 1969 the evidence was that David Milgaard
19		was an A blood type non-secretor?
20	А	That's correct, yes.
21	Q	And the snowbank sample was identified as being
22		from an A blood type secretor?
23	А	Yeah.
24	Q	Which, arguably, was favourable to Mr. Milgaard in
25		the sense that there wasn't a link necessarily
		Mayor CommuCount Depositing

1		made between those two?
2	A	That's right.
3	Q	So, if anything, that incorrect evidence, if we
4		can call it that, by Staff Sergeant Paynter, if we
5		assume that it was incorrect, was more favourable
6		to Mr. Milgaard in that it didn't place him at the
7		crime scene; would you agree with that?
8	А	Well, from my assessment of it we can't, we can't
9		say that we know if the result was positive or
10		negative. I would say it is not scientifically
11		valid so it's a null result.
12	Q	Yes. But if, if we have the evidence that was at
13		trial, and with the judge saying that 'there is no
14		blood, there is no evidence of blood being found
15		in that sample', but yet the sample is from an A
16		blood type secretor and Mr. Milgaard is identified
17		as an A blood type non-secretor, I guess it's
18		logical to conclude that that arguably goes more
19		towards eliminating Mr. Milgaard from the crime
20		scene than implicating him at the crime scene?
21	А	Well, if you start from a false hypothesis, you
22		can directly get to a correct false answer, for
23		what that's worth, if you understand what I am
24		trying to say.
25		COMMISSIONER MacCALLUM: I get your point,

1		Mr. Gibson.
2		MR. GIBSON: Okay, thank you, Mr.
3		Commissioner.
4	BY I	MR. GIBSON:
5	Q	And I don't know whether you have had a chance to
6		review Dr. Ferris' report, but perhaps you have,
7		and again I don't want to take a great deal of
8		time plowing through that report, but again, Dr.
9		Ferris at document 028652 at 658 says:
10		" serological evidence at trial
11		failed to link David Milgaard"
12		to the crime and could reasonably be concluded to
13		have excluded him. And, again, would you agree
14		with that hypothesis, doctor?
15	А	Not after my assessment of the evidence. I mean,
16		it came as no surprise to me when his secretor
17		status was repeated and was found to be positive,
18		that's what I expected.
19	Q	But, again, just backing up to the evidence
20	А	But then, well so we've changed that bit of the
21		equation, and I'm not satisfied we know whether it
22		was yes or no so far as the secretor so far as
23		the seminal fluid was concerned, as far as I'm
24		concerned it's a null result.
25	Q	But on

1		COMMISSIONER MacCALLUM: What's the doc ID
2		please?
3		MR. GIBSON: The doc. ID on that is 028652
4		at 028658.
5		COMMISSIONER MacCALLUM: 652 at 658.
6	B.	Y MR. GIBSON:
7	Q	But, again, you would agree that some medical
8		individuals and Dr. Ferris will have an
9		opportunity to testify took the position that
10		the medical evidence that was led at the Milgaard
11		trial back in 1969 or 1970 went more towards
12		exonerating David Milgaard than implicating him?
13		Some have taken that view, and I take it you have
14		a different view, but you can see how that view of
15		that evidence could be
16	А	I can understand, I can understand how he came to
17		that situation, but I have had other material
18		presented to me and, shall we say, I now realize
19		that I was in the twilight, but I think poor Rex
20		Ferris, he was in the darkness when he decided
21		that, you know, this would exonerate him.
22	Q	And
23	A	We just did not have enough detail in the material
24		which was presented, and even though we now have
25		further detail, you cannot validate a lot of

1		things scientifically and they must remain null.
2	Q	Now one comment that you gave us earlier this
3		morning was the frozen lumps were found with some
4		what was identified by Mr. Molchanko as pubic
5		hair, human pubic hair, and I think you had the
6		line of the morning, certainly, when you said that
7		that let the dog off the hook?
8	A	Well, if they were correctly identified as human,
9		it would let the dog off the hook.
10	Q	Now, doctor, would you agree with me that, as a
11		forensic scientist, if someone gives you a sample
12		like that
13	А	Yeah, but I'm not a forensic scientist, I'm a
14		haemopathologist, I just got dragged into this.
15	Q	Oh, sorry, okay. Now if we put ourselves into
16		Mr. Paynter's position, and he has a sample that's
17		given to him and I don't want to go through all
18		of the tests that he undertook but would you
19		agree with me that if there is human pubic hair
20		identified with that sample one might be more
21		inclined to identify that it was of human origin
22		than of animal origin; that would just be common
23		sense, wouldn't it?
24	A	Yes, one would be inclined to come to that
25		conclusion.
	I	

1	Q	Okay. And we also talked about the coloration of
2		the sample that was found, and again I don't want
3		to talk about whether it was a pale yellowish or
4		a you know, I don't want to go through that in
5		any great detail with you, but I think you were
6		fair in your comments this morning that there was
7		contamination at the scene and that it's possible
8		that if there is some blood, and if it's diluted,
9		that it could give coloration to the sample, and
10		that that one one could look at that and it's
11		possible to have found a yellowish tinge to it, or
12		a clearish coloration with a bit of yellow in it.
13		Is is that, again, a fair summary of what your
14		evidence was?
15	A	Well I said possible, highly improbable, I think.
16		I mean it reminds me of the Yorkshire expression:
17		"I'll believe you, but thousands wouldn't".
18	Q	Now we have the testing, and I won't go through
19		that with you again, that Mr. Paynter has done,
20		and I think you'd probably agree with me that a
21		scientist basically doesn't have a choice,
22		necessarily, of what his samples are that he is
23		going to test?
24	A	Yeah. I would like to add something to that.
25	Q	What

1 Α I sympathize with Sergeant Paynter. He was given 2 Now did he have the option of this to examine. 3 saying, you know, "I've considered it and decided 4 we'll get into more trouble than a little, this 5 isn't going to provide unequivocal verifiable evidence, forget it". I mean I doubt that. 6 I mean I have been a laboratory 8 director for quite a long time. None of my 9 technical staff are in that position. They bring 10 it to me, and I tell whoever thinks they are going 11 to get the lab to analyse it that they are not 12 going to get it to analyse, because it isn't going 13 to yield a valid result. 14

So I do not wish to criticize

Sergeant Paynter in his situation, or predicament,
depending upon just how -- what the situation was.

And I guess, in sort of looking at that situation,
Sergeant Paynter had the police come with him -come to him with a sample and say "this is what we
have, we found it four days later near the, where
the body was, is there anything you can do to help
us", and I suppose as a scientist he said "well, I
don't know what I can do, but I'll have a look"?

IImm well --

A Umm, well --

15

16

17

Q I mean it --

	il	
1	A	Well, I don't know, maybe they came and said "here
2		it is, you process it, and that's it". But
3	Q	But would you agree with me that, in the situation
4		that we're dealing with here, it would have been
5		much better to have a sample that was more closely
6		tied to the body? Now there is evidence that the
7		vaginal aspirate was destroyed and that was never
8		tested by Staff Sergeant Paynter. Now would you
9		agree with me that that would have been a better
10		sample to have tested than something that was
11		found four days later in a snowbank?
12	А	Yeah, but well there is a problem there. David
13		Milgaard was blood Group A, secretor, the deceased
14		was blood Group O, secretor status I don't know.
15		Umm, I think that's another sample which would
16		have been better well, it was not processed,
17	Q	It wasn't.
18	А	and I think it would have been better if this
19		lot hadn't been processed either.
20		I mean I have concerns about
21		this. I mean did Staff Sergeant Paynter have the
22		staff and resources to go send somebody to
23		Saskatoon to secure a valid sample from David
24		Milgaard in the first place? Did he? No. It
25		just arrives on his door step. I mean, it is one
		1

1 thing -- well, I mean there is no reason why a 2 valid sample couldn't have been collected if there 3 were resources available; it's another situation 4 if you find saliva, dried saliva at a crime scene, 5 you process what you have got, that's all you are But with David Milgaard in Saskatoon, gonna get. 6 they could have got a perfectly good sample, we 8 wouldn't have had this rather unfortunate 9 situation we now have. 10 Now I take it, Dr. Merry, that the tests that went 11 on in 1969 where you have a sample, and whether 12 it's from a secretor or a non-secretor, etcetera, 13 that that type of testing is probably not used 14 much these days, and that if you have a human 15 sample one would try to do DNA analysis on that, 16 and you would get a much more specific result? 17 If you have got a seminal sample you go straight Α for DNA. 18 Who cares what the blood groups are, you 19 are not going to transfuse the deceased or the 20 accused, so you are not interested in blood 21 groups. 22 So part of the mandate of this Commission is to, 23 obviously, try to make recommendations so wrongful 24 convictions don't happen in the future, and I take

it you would agree that, for future cases, it

would be advisable to save exhibits so that they could be tested later on when science advances, and that may well help to solve the crime? I suppose that's a fairly easy thing to agree with? I think when one looks at quality assurance procedures, which weren't fulfilled in various points of what we have looked at, that is a systemic failure. You have to identify the systemic failure and you have to make sure that it does not happen in the future. So there were low-tech systemic failures, okay, now we're going high-tech, well high-tech systemic failures isn't going to help us a helluva lot either, is it. So we better identify some fundamental principles.

me that the valid recommendation would be that even if the science today is not capable of making use of a given sample, it should be saved anyway, in case science advances to the point where that sample will become useful? That's what I understood by his question.

BY MR. GIBSON:

Q Yes.

Α

- A Yes, that is correct.
- 25 COMMISSIONER MacCALLUM: Okay

Α And, you know, we have to make sure there is absolute validation, all quality assurance procedures are in place, proficiency testing has verified the methods. If they fail in low-tech stuff, if they aren't in place for high-tech stuff, there will be errors in that as well. BY MR. GIBSON: 8 Dr. Merry, I want to talk just briefly about Q Mr. Paynter doing the microscopic analysis of the 10 sample that he did. And, again, we've talked at length today about metamorphological differences between canine and human spermatozoa, if that's

That document was 04772 at 04778, and Dr.

Markesteyn took the view that the only way of excluding this semen for being of non-human origin would have been the morphology and/or species-specific antigen body reaction tests. So he was of the view that you could make that determination through morphological testing or examination under a microscope, and you take a different view than that, and I think you've told

possible to differentiate, and I take it that you

were of a different view than Dr. Markesteyn.

Α I don't think it could be absolutely reliably

us that; correct?

		7 ago 22 7 7 0
1		done.
2	Q	So
3	А	And
4	Q	No, and I appreciate that you have given us that.
5		And Dr. Markesteyn also gave some evidence I
6		suppose, and will give some evidence, but through
7		that document that was put to you he took that
8		position, and you disagreed with that; correct?
9	A	Well, I disagree with the first premise he puts.
10		The second premise,
11	Q	Yes?
12	A	specific immunologic identification, I agree
13		with that.
14	Q	Yeah. And, in fairness, his document says
15		morphology and/or those species-specific antigen
16		antibody reaction testing?
17	A	Well, I mean, if you put it to Dr. Markesteyn
18		perhaps you should qualify it; spermatozoa which
19		had been dead four days, are all scrunched up, the
20		morphology leaves a great deal to be desired, do
21		you think you can identify human from dog under
22		those conditions. We're not looking at fresh
23		material, you know. I mean
24	Q	And
25	А	I have had the odd medical well, I've had

1		one medical/legal autopsy, it took us two days to
2		find out whether the body was male or female. I
3		mean, things can get in a rather deteriorated
4		condition.
5	Q	And I take it, doctor, that your evidence was that
6		you obviously never looked at the sample and you
7		weren't able to comment on whether Staff Sergeant
8		Paynter was able to make that differentiation?
9	A	No, I'm not able to comment on that.
10	Q	Okay.
11	A	I don't know what he looked at, so that's it.
12	Q	And
13	Α	The other problem is, since we're on spermatozoa,
14		how much how many spermatozoa were in the
15		specimen? I mean, if we know the number, it might
16		give us an idea as to dilution factors. I think
17		we were logs out of detectable range. I mean,
18		there is no data there recorded, is there any in
19		existence at all?
20	Q	Not to our knowledge, we simply have Staff
21		Sergeant Paynter's notes in that he identified the
22		sample as human, but he never quantified it, and
23		he gave evidence at the Inquiry that that's what
24		he was able to differentiate or identify from the
25		sample.

		7 dg0 22 7 77
1	А	We're left with the unanswered question; was the
2		dilution of the sample 1 in 10, 1 in 10,000, or
3		possibly
4	Q	Yes.
5	A	1 in 100,000 or a million or more. We don't
6		know, do we.
7	Q	Now, if we could just put up document 002511. And
8		I think that document was put to you earlier today
9		and, again, it was a letter from a Patricia Alain
10		to a Mr. Eugene Williams, it's dated June 12th of
11		1990. And she takes the position, the last
12		sentence or two of that paragraph that's
13		highlighted:
14		"The morphological differences of human
15		spermatozoa and canine spermatozoa are
16		several."
17		And that:
18		"The experienced examiner would not have
19		any problems in distinguishing between
20		human and canine spermatozoa."
21		So I take it that Dr. Markesteyn's position was
22		that that is a test that could be done, you could
23		look at that and make that differentiation;
24		Mr. Paynter took that position; and it appears
25		that Ms. Patricia Alain, who is the Chief

1		Scientist, Serology Department with the RCMP lab,
2		also takes that position that there can be a
3		differentiation under a microscope made. And I
4		take it you disagreed with that as well; is that
5		correct?
6	А	Well Dr. Markesteyn and I did sort of briefly
7		discuss that at one time. I wanted to see slides
8		to have a look at the morphology.
9	Q	Unfortunately, those weren't available.
10	A	They weren't available.
11	Q	But you will agree with me
12	А	The other thing
13	Q	No, if I may, Dr. Merry; you will agree with me
14		that Dr. Markesteyn took the position that it was
15		possible to look under a microscope and make a
16		determination on morphology?
17	A	Well, that's what it says in the transcript.
18	Q	Absolutely.
19	A	I took the position that we'll try, I'd like to
20		see it under optical microscopy, if we've got a
21		good sample we can do electron microscopy on it
22		and see if, at electron microscopy level, we can
23		distinguish, definitely, a difference. There was
24		nothing there to do anything on.
25	Q	Right. And then we have Staff Sergeant Paynter

give evidence that he was of the view you could look under a microscope and make a determination, and now we have Patricia Alain who also takes that position as well. And if I could just put up another document, please, 278893. And, again, this is a document originating within the Government of Canada from a Cathy MacMillan with the Biology Section of the RCMP, and it's an internal RCMP memo. If we could just turn to the next page of that, please, and if we could call up this part, please, and she writes:

"In my opinion, the results obtained at the time of the Miller investigation indicating the two frozen lumps were human semen, are correct. The tests used at that time have not changed significantly and are currently in use in the Biology Section.

Two tests are carried out in order to conclude a stain is human semen. The preliminary test, identifies high levels of acid phosphatase which is found in human semen. If this test is found to be positive, the area is examined microscopically for

spermatozoa. Human spermatozoa are
morphologically different (as seen
microscopically) than animal
spermatozoa. Only at this stage, can a
conclusion be drawn as to the origin of
the semen."

And, again, we have Cathy MacMillan with the

Biology Section of the RCMP indicating in her view, looking at spermatozoa under the microscope, that one is able to distinguish between animal spermatozoa and, I guess, human spermatozoa. And I take it you would disagree with that view, then, proffered by her?

Well, I wouldn't take a black and white position, I would say with what certainty can you identify it; at a 99 percent level, at a 90 percent level, at 75 percent level? I mean --

Q So, again, it --

Α

-- morphology, I mean it's just eyeballing things, really, either directly or down a microscope.

It's just a question of a visual valuation, I mean, it is not high-tech. You note what features you can see, but when the features are all extremely similar, it's very subjective. It's a very subjective judgement, it's not objective, you

1		know; "this dogs have this, humans have that".
2	Q	Now, Dr. Merry, we know that the individual that
3		was eventually convicted of the crime through DNA
4		analysis, Mr. Fisher, was identified as an A blood
5		type secretor, and would it be your view, then,
6		that it was just a coincidence that Staff Sergeant
7		Paynter was able to identify an A blood type
8		secretor sample in the snow and identify that as
9		human seminal fluid?
10	A	Well, we have been through that, I think that's a
11		sort of a null situation. I mean, statistically
12		speaking, you are looking at well, it varies
13		according to the population, over here they use
14		the figure of 49 percent are Group A positive, it
15		depends upon the ethnic mix of the community, but
16		we look at 49 percent. I mean a coincidence,
17		there is a 49 percent chance, if they got it
18		right. If the result was right there is a 49
19		percent chance that well, 49 percent they could
20		get it right by chance. Umm, I don't think they
21		you can regard it as a valid result.
22	Q	And again, and I won't belabour this, this is my
23		last point here, your view is that the evidence
24		that was led at the trial for Mr. Milgaard, and we
25		went through that at the outset of my questioning, $\P$

1		never linked Mr. Milgaard to the crime?
2	А	No. I mean, if we had had the ideal situation, we
3		got the secretor status right from the outset,
4		that David Milgaard was positive, we had a valid
5		seminal fluid specimen and we were quite sure that
6		that was from a group A secretor, so we have
7		evidence. Well, I looked up some data.
8		Apparently Saskatoon in 1967 had a population of
9		95,526. Well, that's near enough around the time
10		I guess. So males over 16, I calculated that, I
11		calculated the group A individuals, so if we've
12		got a group A secretor and we've got a group A
13		specific substance in the seminal fluid, David
14		Milgaard would have been a suspect amongst 12,778
15		others. I mean, I don't know how useful that is,
16		but
17	Q	Certainly not useful to link him to the crime?
18	А	Well, it narrows it down you might claim. I mean,
19		you've narrowed it down from 33,434 males who
20		could have done it, you've narrowed it down to
21		12,778.
22	Q	Now, if on the other hand the evidence goes in to
23		the point where he's identified as a non-secretor
24		and the sample found is for an A secretor and he's
25		an A non-secretor, again that arguably, as you

1		said, would not connect him to the crime and
2		arguably would go to eliminate him?
3	A	Yes. The irony of the whole situation is they got
4		the secretor status wrong from the outset, we have
5		a result which I would regard as null, but they
6		said it was positive. There would have been good
7		reason that he could be acquitted on the evidence
8		which wasn't right and on erroneous evidence
9		justice might have been done.
10		MR. GIBSON: Thank you.
11		MR. HARDY: No questions on re-exam.
12		COMMISSIONER MacCALLUM: Thank you, Dr.
13		Merry, for coming, and you are excused.
14	A	Thank you.
15		MR. HODSON: The next witness is Tom Vanin.
16		I'm wondering if we should take the afternoon
17		break. We only sit until four today.
18		COMMISSIONER MacCALLUM: All right, yes.
19		(Adjourned at 2:35 p.m.)
20		(Reconvened at 2:54 p.m.)
21		MR. HODSON: Mr. Commissioner, the next
22		witness is Mr. Tom Vanin and I would ask him to
23		come up to the witness stand, please.
24	THO	MAS VANIN, sworn:
25	BY I	MR. HODSON:

1	Q	Good afternoon Mr. Vanin. Thank you for agreeing
2		to testify before this Commission of Inquiry. I
3		should note for the record that Mr. Vanin is
4		represented by counsel, Mr. Morris Bodnar, who is
5		present today.
6		COMMISSIONER MacCALLUM: Mr. Bodnar.
7	В	Y MR. HODSON:
8	Q	And as well, Mr. Vanin, I understand, sir, would
9		you like to claim the protection of the Canada
10		Evidence Act and the Saskatchewan Evidence Act?
11	A	Yes, sir.
12	Q	And I believe, Mr. Commissioner, that his claim is
13		sufficient to take the protection of those acts?
14		COMMISSIONER MacCALLUM: Yes.
15	В	SY MR. HODSON:
16	Q	I understand, Mr. Vanin, that you are 62 years of
17		age; is that correct?
18	A	Yes, sir.
19	Q	And that you reside in Saskatoon?
20	A	Yes, sir.
21	Q	And that you are a retired police officer having
22		worked with the Saskatoon City Police from 1964 to
23		1996; is that correct?
24	А	Yes, sir.
25	Q	I would like to show you document ID 333242, and
<u></u>		Meyer CompuCourt Reporting ————————————————————————————————————

1		this is a document, Mr. Vanin, that I showed you
2		the other day, it's a document provided to us by
3		the Saskatoon City Police, they provided us
4		similar information for all former police
5		officers, or retired police officers who have
6		testified, and I just quickly want to go through
7		this to ensure that it's accurate. Have you had a
8		chance to look at it?
9	A	Yes, sir.
10	Q	And I understand there may be one, is there a
11		that you may have gone straight from constable to
12		sergeant, is that right, or is that accurate?
13	A	That's correct, I went from constable to sergeant.
14	Q	So the '73, corporal, you say that's not correct;
15		is that right?
16	A	That's not correct.
17	Q	And then if we could just go down to transfers,
18		please, this sets out time frames and the areas
19		where you were assigned. Are you able to tell us
20		whether that is accurate?
21	A	Where it says "operations support/service centre
22		unit reader detail," to my knowledge I've never
23		worked in those positions.
24	Q	Okay. Do you recall, if we could just go back,
25		prior to that you were with major crime. Do you
	1	The state of the s

1		recall where you went between major crime and
2		finance informatics, or was it in major crime?
3	A	No, from major crimes I would have gone to the
4		finance informatics.
5	Q	Okay. There's a couple of time frames just from
6		this that I want to point out that we'll touch on
7		a bit later. In 1969, at the time of Gail
8		Miller's death, I understand that you were a
9		uniform officer on patrol; is that correct?
10	A	Yes.
11	Q	And then as well this time frame right in here,
12		January 25, '91 through until, if you can just
13		highlight that part, the 1991 time frame, I'll be
14		touching on that a bit later, you would have been
15		an investigator in major crime or in charge of
16		major crime; is that correct?
17	A	I believe at that time I was in charge of major
18		crime.
19	Q	Now if we can we're done with that document.
20		If we can go back to 1969, sir, were you involved
21		in any way in the Gail Miller murder
22		investigation?
23	A	No, sir.
24	Q	Were you generally aware of the case at that time?
25	A	Yes, sir.
		•

		•
1	Q	And just generally what did you know about it and
2		where did you know about it from?
3	A	Everybody in the department was advised that there
4		was a murder and an investigation was taking place
5		and this would have been common knowledge to all
6		the members.
7	Q	And I take it, sir, at some point in time you
8		would have become aware that a Mr. David Milgaard
9		was arrested, charged and convicted for that
10		crime; is that correct?
11	А	Yes, sir.
12	Q	Did you at some point form any view regarding
13		David Milgaard's guilt or innocence for the murder
14		of Gail Miller?
15	А	Yes, sir.
16	Q	And can you explain when that took place, if you
17		can put a time frame on it and what that was?
18	А	Right from the time that Mr. Milgaard was arrested
19		until this date, I've always believed that he was
20		innocent.
21	Q	And on what basis did you have that belief, Mr.
22		Vanin?
23	А	I couldn't find anybody that could give me any
24		evidence, any of the detectives or anything that
25		would convince me that Mr. Milgaard was
		4

1 responsible for the murder. Eddie Karst and I had 2 become good friends, and I think until this day 3 we're still good friends, and I would ask him, you know, what evidence did they have, and he said 4 5 from what he knew of the file there was nobody else -- that they had eliminated everybody else 6 and this left Mr. Milgaard. 8 And just again to go back, sir, I take it you would have been aware that Mr. Milgaard went 10 through a court proceeding and was convicted by a jury back in 1970? 11 12 Α Yes.

> Q And notwithstanding that conviction, did you have doubts at that time that he was the person that had committed the crime?

13

14

15

16

17

18

19

20

21

22

23

24

25

Α

Yes, I still had doubts, and I'll tell you, there was a large number of people in the department that were shocked when the jury came in with a guilty plea. Mind you, these were uniform members that had nothing to do with the case. He was represented by Mr. Tallis and we just felt that he had the best lawyer that was available and we just didn't see any hard evidence pointing to him, but again, we didn't have access to any of the files. I did not attend the trial or the prelim. It's

1		just the way the membership felt, or some of the
2		membership felt.
3	Q	Were you aware of the incriminating evidence that
4		was presented against Mr. Milgaard at trial?
5	А	Yes, I was told by somebody that Mr. Cadrain gave
6		evidence and I was also told that there was blood
7		on Mr. Milgaard's clothing. Later talking to
8		other officers, and I didn't know Mr. Cadrain, I
9		never did meet him, but the other officers that
10		did know him told me that he was absolutely crazy
11		and not believable, and in respect to the blood on
12		the clothing, I found out later there was no
13		blood.
14	Q	And where did you find that out from?
15	A	I think I found that out from David Roberts, a
16		reporter for <i>Globe</i> Manitoba.
17	Q	And I think he's a Globe and Mail writer, or was a
18		Globe and Mail writer at the time; is that
19		correct?
20	A	I think so.
21	Q	And I'll be going to some documents later, and one
22		would suggest that that would be in the 1991 time
23		frame; is that right?
24	A	1991 or possibly earlier.
25	Q	Okay. And again I'll show you some documents
		<b>3</b> .

1		later, some articles of Mr. Roberts. So again if
2		I could just go back at the time, 1970, and I
3		think you've told us, and please correct me if I'm
4		wrong, that at that time you had the same doubts
5		then that you had later and still, or that you had
6		later on; is that correct?
7	A	Yes.
8	Q	And you told us about how some uniform officers
9		were shocked when he was convicted?
10	А	Yes.
11	Q	And can you tell us why, or what was your
12		perception or what was the discussion?
13	А	I think they felt that because Mr. Milgaard was
14		represented by Mr. Tallis, that there would be no
15		way that he would be convicted, and our only
16		source of information was what was in the papers
17		and we just didn't think there was enough evidence
18		to convict him.
19	Q	Okay. So just the information then that you
20		would have had would have been from what you read
21		in the paper as opposed to what you would have
22		learned directly from your role as a police
23		officer; is that right?
24	А	In the beginning in the after Mr. Milgaard's
25		conviction, yes, but then later on when I was,
25		conviction, yes, but then later on when I was

1		wrote my exam and was promoted to sergeant, I was
2		immediately transferred to detectives and then I
3		started talking to detectives, and again I just
4		couldn't, I couldn't nobody could give me any
5		information that proved to me beyond a doubt that
6		he was guilty.
7	Q	And what effect if any did the fact that a jury
8		found beyond a reasonable doubt that he had
9		committed the crime, what role if any did that
10		play in your thinking?
11	A	None whatsoever. I think there's 140 men in the
12		United States that were on death row that were
13		acquitted or had their convictions reversed
14		because of DNA.
15	Q	And just back on your comments about Mr. Tallis,
16		and I know there's a number of defence counsel in
17		this room who would say oftentimes good defence
18		counsel have clients who are convicted, or
19		represent guilty parties, and I'm not suggesting
20		that Mr. Milgaard was guilty, he was not, but the
21		fact that Mr. Tallis represented him, can you
22		explain how that influenced your thinking that he
23		was not guilty or innocent?
24	А	It wasn't so much the fact that Mr. Tallis
25		represented him as I could not learn from anybody
	II.	

1		what good, concrete evidence they had to point to
2		Mr. Milgaard's guilt. There was no forensic
3		evidence, there was no I just didn't see any
4		hard evidence and nobody was able to show me any
5		hard evidence.
6	Q	Okay.
7	A	And that's what I was looking for.
8	Q	And would it be fair to say, Mr. Vanin, that over
9		the course of, let's say, from 1970, the date of
10		the conviction through until the early 1990s, and
11		I'll be dealing with that a bit later, that over
12		those 20 years you continued to hold views,
13		continued to ask questions and continued to hold a
14		view that Mr. Milgaard was innocent; is that fair?
15	А	That's correct.
16	Q	Just back in 1969, 1970, do you have any
17		recollection of Larry Fisher, that name being
18		known in police circles, or did you know that name
19		at all?
20	А	No. Larry Fisher's name came to me either by way
21		of newspaper or from David Asper, a lawyer in
22		Winnipeg.
23	Q	And would that be again in the 1990 time frame?
24	А	It would be in the late '80s or '90s, I'm not
25		sure.

1	Q	And so to the extent that you were probing and
2		asking questions from 1970 onward, is it your
3		evidence, sir, that the name Larry Fisher never
4		came up then?
5	A	Not until I read it in the paper or not until Mr.
6		Asper asked me if I ever heard of Larry Fisher.
7	Q	And we'll touch on that a bit later. What about
8		back at the time of the Gail Miller murder, do you
9		have any recollection of there being rapes
10		occurring in and around that time in the area of
11		the murder, do you have any recollection of that?
12	A	Yes.
13	Q	And what is your recollection?
14	A	Just that there was rapes, but I was assigned, I
15		was a young constable and I was assigned to patrol
16		division and had nothing to do with any of the
17		investigation, and at that time the structure was
18		such that morality didn't share any information
19		with patrol division or wouldn't share any
20		information with detectives, the detectives
21		wouldn't share any information, everybody worked
22		in their own little clique.
23	Q	And when you say, when you use the word wouldn't,
24		are you saying a deliberate desire not to provide
25		the information or that it just didn't happen?
		4

		1 age 22 134
1	A	I'm saying that there was, from my recollection or
2		from my perception there was competition between
3		the morality section and the detective section.
4	Q	Okay. In what sense?
5	А	In making the arrests or making good arrests,
6		solving crimes.
7	Q	And so again let's just talk about your
8		recollection of what was going on in the morality
9		division then at the time. So you were in patrol
10		in 1969, 1970; is that right?
11	А	Yes, sir.
12	Q	And again patrol would be, would be what, just
13		give us a brief explanation of what that would
14		involve?
15	А	You work in uniform in a marked patrol car, you
16		are assigned a certain area of the city and you
17		work a lot of shift work. You respond mostly
18		responding to calls.
19	Q	And so if there were some rapes and rape
20		investigations being conducted by morality
21		officers, to what extent if any would you as a
22		patrol officer be aware of what's going on or be
23		involved in their investigation?
24	A	The only time a patrol member would ever become
25		involved, if somebody from morality or detectives

1		would come to them and ask them if they saw
2		anything unusual in their district or any unusual
3		cars or, you know, if they could shed any light on
4		any suspects.
5	Q	And can you give us
6	А	Nobody in patrol was ever asked to be part of the
7		investigation, or at least I was never asked to
8		be.
9	Q	Can you give us any specific examples of
10		situations where morality and detectives did not
11		share information or deliberately didn't work
12		together or anything of that nature?
13	А	Particularly in relation to bootlegging, often the
14		bootleggers would be informants for the detectives
15		and the morality people would be trying to arrest
16		the bootleggers, so this information wouldn't be
17		shared.
18	Q	I don't think I'll touch that one. Again, so that
19		was an area where there was some discomfort then
20		between morality and detectives?
21	А	I wouldn't say discomfort. I would like to think
22		of it they were competing with each other.
23	Q	And so competing in the sense that morality wanted
24		to arrest the bootleggers and the detectives
25		wanted to use the bootleggers to get information
		Meyer CompuCourt Reporting

1		to solve other crimes; is that fair?
2	А	That's what I'm trying to say, sir.
3		COMMISSIONER MacCALLUM: I thought it was
4		the other way around. Did I get it backwards, or
5		does it matter? Who were the bootleggers
6		informing, morality or the detectives?
7	А	The bootleggers were informants to the detective
8		division.
9		COMMISSIONER MacCALLUM: I did get it
10		backwards. Thanks. Okay.
11	I	BY MR. HODSON:
12	Q	Now, I understand, Mr. Vanin, at some point you
13		began to express or let me just back up. Would
14		it be fair to say that did you express your
15		views and concerns about David Milgaard's
16		innocence within the city police department to
17		other police officers, to your superiors, for
18		example, over the years?
19	А	No, I didn't share that information with anybody
20		because administration I think would have taken a
21		very dim view of that.
22	Q	And why is that?
23	A	I don't know. I can't answer for administration.
24	Q	Now, at some point, sir, did you begin to express
25		your views and concerns about David Milgaard's
		4

1		innocence with people outside the Saskatoon City
2		Police Force?
3	А	In the 1980s I believe Mrs. Milgaard was in the
4		Saskatoon area and it became noted that there was
5		private detectives making inquiries and there was
6		some write-ups favouring Mrs. Milgaard and perhaps
7		David Milgaard's innocence and then I started
8		at that time I was in major crime and I started
9		receiving phone calls from all over Canada from
10		different news organizations and I was learning
11		more about David Milgaard's conviction from them
12		than I was, than I knew from within the
13		department.
14	Q	And at some point, sir, did you start to talk to
15		people outside of the Saskatoon City Police Force
16		about your views and concerns about David
17		Milgaard?
18	А	Yes, sir.
19	Q	And can you tell us with who? Can you tell us how
20		it started and with who?
21	А	It started by getting all these phone calls, and I
22		mean many, many phone calls from all over Canada.
23	Q	And at the time, sir, I think you said you were in
24		major crimes?
25	A	Yes.
		1

		ŏ
1	Q	And again
2	Α	Some of the time I could have been in the traffic
3		division.
4	Q	Would they be let me just would they be
5		calling you, and again we've heard some evidence
6		already that a number of officers were getting
7		contacted by the media. Would you have been
8		called sort of randomly by a reporter saying,
9		okay, you are Tom Vanin, you are in major crimes,
10		maybe you can tell us something, would that be the
11		type of calls you would be getting, or was there
12		something that precipitated a call to you
13		specifically?
14	Α	Some of it would be because I was in major crimes
15		or was the supervisor in major crimes. Others
16		were I had a pretty good track record for
17		solving a number of homicides and I guess the word
18		spread and these people would be contacting me,
19		and I was contacted at work, I was contacted at
20		home.
21	Q	And would the first contact then have been by
22		media; is that correct?
23	А	Yes.
24	Q	And do you remember any of the names of the people
25		or the organizations that called you?
	ñ	

- I remember a gentleman by the name of Karp.

  Q Carl Karp?

  A I'm not sure of the first name. I had two

  conversations with him, but we never really shared
- anything, and then Dave Roberts, I had several
  calls from him and he made trips to Saskatoon to
  interview me and advised me that he was either
  working for Mr. Wolch or giving information to Mr.
  Wolch and at that point in time I contacted Mr.
  Wolch.

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

- Q Okay. Let me just pause there for a moment. If we can call up 333242, please, and this was the document I showed you before, Mr. Vanin, I'm just trying to get a sense of the time frame, and I'll be showing you some articles from Mr. Roberts that suggest that he started to write in The Globe and Mail about this matter in 1991 and I think you said that the calls would have been either all or primarily when you were in major crime. Are you able to tell us whether it was likely in this time frame of January, '91 -- well, let's just take the year 1991. Would that sound right about the time frame when you would have started to talk to Mr. Roberts and Mr. Wolch and others?
- A I think I was talking to Roberts before that and

1		that might have been about the time frame where I
2		started to talk to Mr. Wolch's people in Mr.
3		Wolch's firm.
4	Q	So again are you able to, and again, if you are
5		not able to tell us, that's fine, but just from
6		your answer that you were in major crime when you
7		were contacted, I think you told us this was the
8		time frame when you were in there, can we take it
9		from that that it would likely be in and around
10		1991, perhaps late 1990 that the media would be
11		calling you?
12	А	I think the media was calling me long before that.
13	Q	Let me rephrase it. When you started to give
14		information to Mr. Roberts and to Mr. Wolch and to
15		Mr. Asper and others, and I haven't got there yet,
16		but when you started to give information to people
17		outside the Saskatoon City Police Service, would
18		that have been in and around 1991; is that
19	А	I'm not sure, sir.
20	Q	That's fine. So let's just go back, I think what
21		you told us, the first call the first call came
22		from Mr. Karp?
23	А	Oh, no, there was calls from Toronto and
24	Q	Okay. Now and for the early calls, did you
25		talk to them or did you turn them away?
		4

		<b>o</b>
1	А	I talked to them, but I had no information to give
2		them.
3	Q	And who would be the first person then outside the
4		Saskatoon City Police Service that you began to
5		share internal information, if I can call it that,
6		or information related to the Saskatoon City
7		Police matters, would that have been Mr. Roberts?
8	A	Yes, I shared information, but not the
9		confidential information. I made arrangements
10		with Mr. Wolch's firm to do that.
11	Q	Okay. Let's just walk through then, and maybe
12		we'll identify first the people that you talked
13		to. First was Mr. Roberts; right? Is that
14		correct? I think you said Mr. Karp, you talked to
15		him a couple of times, but really didn't say much
16		to him; is that fair? Am I characterizing your
17		evidence right?
18	A	That's correct.
19	Q	And we know Carl Karp was with the CBC and had
20		also written a book. Does that ring a bell at
21		all?
22	A	I'm aware that he was writing a book.
23	Q	Okay. And was that what he was calling you about
24		do you think?
25	A	I believe so.

1	Q	And then Dave Roberts we know is a writer with The
2		Globe and Mail, and there's another fellow there,
3		Timothy Appleby that often wrote columns with him.
4		Does that name sound familiar?
5	A	Yes, and Appleby came to my house. I think he was
6		from Toronto.
7	Q	Yes. And so David Roberts and Timothy Appleby
8		were reporters with The Globe and Mail that you
9		shared information with from time to time; is that
10		correct?
11	А	We discussed the file and just generalities. I
12		didn't want to divulge any information that could
13		get me into trouble under the Saskatchewan Police
14		Act.
15	Q	And what were your concerns, or what was your
16		understanding, Mr. Vanin, of what your obligations
17		were as a member of the Saskatoon City Police
18		about discussing police matters outside the
19		confines of the police force?
20	A	That you were subject to a charge.
21	Q	And so again would it be fair to say that you knew
22		that you weren't supposed to talk to the media and
23		lawyers and others about police matters; is that
24		fair?
25	A	I could talk to them about police matters, but not $\P$

		1 ugo 22 140
1		about confidential matters.
2	Q	And so then, after you talked to Mr. Roberts, I
3		think you did you then call Mr. Wolch?
4	A	Yes.
5	Q	And what, tell us what took place in that
6		discussion?
7	А	I spoke to Mr. Wolch briefly and he asked me, and
8		I identified myself, and the reason why I was
9		calling.
10	Q	Okay. And what was the reason you were calling?
11	А	I thought I might have some information that could
12		help him in regards to Mr. Milgaard.
13	Q	And would that be confidential information?
14	А	Yes.
15	Q	And so just, then, we'll touch on this a bit
16		later, but 'confidential information' would be
17		information that was part of the Saskatoon City
18		Police workings, so to speak, that wouldn't be or
19		shouldn't be shared outside the Saskatoon City
20		Police force; is that fair?
21	А	That's the way I understood it.
22	Q	Yeah. So you phoned Mr. Wolch and said "I have
23		confidential information that may help you"; is
24		that right?
25	А	I told him I believed that I could have some

1		information or could learn of some information
2		that could help him in his file in respect to Mr.
3		Milgaard.
4	Q	And at that time what was the confidential
5		information that you had?
6	A	I'm not really certain, now, what it was.
7	Q	Well was it a case that you had some or you
8		thought you, you may have had some but you thought
9		that you could get some more, or
10	A	I think it was that I could get more information.
11		As I was getting information from them, things
12		started to come together, and I just felt I could
13		help him.
14	Q	Okay. And what did Mr. Wolch tell us more
15		about what you recall of your discussion with
16		Mr. Wolch?
17	A	He asked me to talk to David Asper, who was really
18		in charge of the file, and in my conversation with
19		Mr. Asper I asked him, if I shared information
20		with him, whether I would have lawyer/client
21		privileges, and he assured me that I would. I
22		asked him, if I shared information with people
23		that worked for him or others that were obtaining
24		information for him, if I shared it with them
25		would I still have lawyer/client privileges, and
		Meyer CompuCourt Reporting

1		he assured me I would. I also asked him that if I
2		was ever charged, would he represent me and
3		without any cost to me, and he assured me that he
4		would.
5	Q	And when you asked him about whether you shared
6		information with others working for him who were
7		you referring to?
8	А	Roberts.
9	Q	That would be David Roberts?
10	А	Yes.
11	Q	And did Mr. Asper tell you that David Roberts was
12		working for him?
13	А	I don't recall.
14	Q	Okay. Did you understand that David Roberts was
15		working for David Asper?
16	А	That was my understanding.
17	Q	And based on what?
18	А	Just with my conversations with Roberts.
19	Q	And when you say "working for Mr. Asper", can you
20		expand upon that, in what sense?
21	А	Gleaning out information and passing it on to him,
22		that they could follow it up.
23	Q	And in the course of your and we'll get into
24		this in detail but in the course of your
25		subsequent dealings with Mr. Asper and Mr. Roberts

1		were there occasions where, in fact, you saw the
2		two of them working together in the sense of
3		sharing information back and forth?
4	Α	Are you referring to Asper and Roberts?
5	Q	Yes.
6	Α	I never did meet Mr. Asper, I only spoke to him
7		many, many times on the phone.
8	Q	When you gave information to Mr. Roberts did you
9		believe that it would get through to Mr. Asper?
10	A	I was assured it would.
11	Q	By Mr. Roberts?
12	A	Yes.
13	Q	When you gave information to Mr. Asper were you
14		assured that it would get through to Mr. Roberts?
15	А	Oh no, he never that wasn't the deal, that he
16		would share it with Roberts.
17	Q	At the time you had the discussion with Mr. Asper,
18		again, do you recall what confidential information
19		or what information you had that you thought might
20		benefit them?
21	А	I I can't recall at this time.
22	Q	And this issue of lawyer/client privilege, was
23		that your concern or issue, did you bring that up
24		or did Mr. Asper bring that up?
25	А	No, that was my reason for calling Mr. Wolch and
		4

		. ago 22 · · ·
1		speaking to Mr. Asper.
2	Q	And what was your concern?
3	A	Well, that I might get charged under The Police
4		Act for giving out confidential information.
5	Q	And so did Mr. Asper tell you, then, that any
6		communications that you had with him or Mr. Wolch,
7		then, were protected by solicitor/client
8		privilege?
9	A	Yes, sir.
10	Q	And I take it, Mr. Vanin, you are not asserting
11		that position today; is that correct? I believe
12		your counsel has indicated to me that it is not a
13		
14	A	From my discussion with you and Mr. Bodnar, you
15		people suggested to me that I didn't have such
16		protection.
17	Q	Well, again, that's again for you to decide. I
18		understand from Mr. Bodnar that it's not being
19		raised in this proceeding that there is any
20		privilege that would attach with your
21		communications with Mr. Asper or Mr. Wolch; is
22		that fair? You are prepared to tell us about your
23		discussions with Mr. Asper and Mr. Wolch?
24	А	Yes, sir.
25	Q	Yeah. Now let's just you've talked to Mr.
	ii	

1		Asper twice, you talked to Mr. Wolch, you talked
2		with Mr. Asper; do you recall what Mr. Asper
3		anything else that he said to you at the time?
4		Did he make any requests of you on the first call
5		or what else was discussed?
6	А	I don't know what call it was on. As I stated
7		before, Asper and I had many many conversations,
8		and at one time he asked me if I knew a Larry
9		Fisher or if I ever heard of a Larry Fisher, and I
10		said "no, I've never heard of that", and he says
11		"that has never come up in the Milgaard file", I
12		says, "not to my knowledge, I have no knowledge of
13		such a person".
14	Q	If we can then go, just to try and define, then,
15		the people that you talked to, Mr. Roberts or
16		pardon me Mr. Roberts, Mr. Asper, Mr. Wolch;
17		did you ever deal with a person by the name of
18		Paul Henderson, an investigator with Centurion
19		Ministries?
20	А	Yes, sir.
21	Q	And can you tell us when and how that came about?
22	А	I can't tell you when that was, but Mr. Asper was
23		to come was going to fly to Saskatoon to
24		interview me, and then he phoned me and told me
25		that he had some other commitments and asked me if

1		it was okay if Joyce Milgaard and Paul Henderson
2		would come to Saskatoon, and he explained to me
3		who Paul Henderson was and I agreed to meet with
4		him.
5	Q	Did he tell you what Paul Henderson was doing in
6		connection with the case?
7	A	Yes, he was investigating the reinvestigating
8		the case, I guess, would be the proper word.
9	Q	And then did you have a meeting with Mr. Henderson
10		and Mrs. Milgaard?
11	A	Yes.
12	Q	And do you recall and, again, I will go through
13		some documents later, Mr. Vanin, that may assist
14		you in putting this in a time frame. Just, for
15		now, let's just talk generally. Do you remember
16		what time of year was it, was it summer, winter,
17		are you able to remember that?
18	A	I think it was in the spring of the year, like
19		late spring, maybe May.
20	Q	Okay. And, again, how long after your first
21		contact with Mr. Asper would this meeting have
22		been with Mr. Henderson and Mrs. Milgaard; are you
23		able to weeks, months, years?
24	A	It would definitely have been months.
25	Q	Okay. And tell us, then, about your meeting with

1		Mr. Henderson and Mrs. Milgaard; what do you
2		recall, where was the meeting, how long was it,
3		and what did you discuss?
4	A	I received the phone call from Mr. Henderson, I
5		knew what date they would be in town, I received a
6		phone call and we made agreed to meet at the
7		Colonial Motel. Mrs. Milgaard was there with him,
8		and that's the first time I ever met
9		Mrs. Milgaard. And we sat down, we had coffee, we
10		made some small talk, and at that point
11		Mrs. Milgaard left. And any information that I
12		shared was just with Paul Henderson, not with
13		Mrs. Milgaard, because she had left, and that was,
14		I believe that was the arrangement Asper and I had
15		made.
16	Q	That, what, that you would only share information
17		with Paul Henderson and not with Mrs. Milgaard?
18	А	That's correct.
19	Q	And why was that?
20	А	I don't know.
21	Q	Was that his idea or your idea?
22	А	Probably my idea.
23	Q	And do you know why that would be?
24	А	I can't tell you. I don't know.
25	Q	And so again, at that time, your meeting with
		1

1		Mrs. Henderson or Mr. Henderson, pardon me, and
2		Mrs. Milgaard; when Mrs. Milgaard was present, did
3		you share any confidential information when in
4		her presence to either her or to Mr. Henderson?
5	А	Absolutely not, we just had a coffee and made
6		small talk and sort of got to know each other a
7		little bit, I don't think Mrs. Milgaard was there
8		for more than ten minutes and then she excused
9		herself and
10	Q	Did you ever meet with Mrs. Milgaard again?
11	A	The next time I saw Mrs. Milgaard was yesterday.
12	Q	And did you ever talk to her on the telephone or
13		provide her with any information?
14	A	No, sir.
15	Q	And I understand that, as well, there was an
16		individual by the name of Greg Rodin, a lawyer
17		acting for David Milgaard as well, that you had
18		some dealings with after Mr. Asper; is that right?
19	А	Yes. I understood that Mr. Asper resigned from
20		the firm and the file was turned over to Rodin.
21	Q	And, again, we'll touch on some documents a bit
22		later but I take it that you had some further
23		dealings with him; is that correct?
24	A	With Mr. Rodin?

		——————————————————————————————————————
1	A	Yes. He flew to Saskatoon, I believe twice, to
2		interview me.
3	Q	And would that have been in connection with the
4		civil proceeding, do you know, or
5	A	I think with everything.
6	Q	Did you have any further discussions with Hersh
7		Wolch after the first phone call?
8	A	No.
9	Q	And so again,
10	A	Not, not 'til yesterday.
11	Q	Okay. And just as far as, let's talk non-media,
12		if I can call it that, we can talk we've
13		identified David Asper, Hersh Wolch, Paul
14		Henderson, Greg Rodin, and Joyce Milgaard for
15		about ten minutes, but the first so Asper,
16		Wolch, Henderson and Rodin; would it be fair to
17		say that you provided confidential information
18		well, let me take out Mr. Wolch. Did you ever
19		provide any confidential information to Mr. Wolch?
20	A	Could you repeat the question, sir?
21	Q	Yeah. Did you ever provide any confidential
22		information on police matters to Hersh Wolch?
23	A	No.
24	Q	And did you provide confidential police
25		information to David Asper?
	1	

1	Α	I don't know if it would be confidential
2		information, it was definitely police information,
3		now whether it would be considered confidential.
4		I took the position that all police information
5		was, was confidential, and was just simply trying
6		to protect myself.
7	Q	And so again, I'll come back to the nature of the
8		information in a moment, but put it this way;
9		information that you normally wouldn't provide to
10		an outside party, would that be a fair, relating
11		to police matters, for example what was going on
12		in the police station at the time regarding David
13		Milgaard's case. If you knew as a police officer
14		what was happening inside the walls of the police
15		station, files were being looked at or witnesses
16		were being interviewed, things of that nature, I
17		take it, sir, at that time it would be
18		inappropriate for you, as a police officer, to
19		disclose that information to a non-police officer;
20		is that fair?
21	Α	I think the administration would have looked at it
22		as inappropriate.
23	Q	And so again, when I used the word "confidential",
24		what I mean to say is information that you knew,
25		as a police officer, should not be shared outside
		Meyer CompuCourt Reporting

1		the walls of the police service; is that a fair
2		understanding?
3	A	Well, I'm not certain that it shouldn't have been
4		shared, but I took the position that,
5	Q	Okay.
6	A	you know, I just wanted to be cautious. I
7		thought it would be prudent to protect myself.
8	Q	Let me try this again. What I am trying to get
9		at, Mr. Vanin, is that I think you told me earlier
10		that at some point you decided to share
11		confidential information with people assisting
12		David Milgaard, information that related to police
13		matters that you ordinarily would not share with
14		outside parties; is that correct?
15	A	Yes, but I
16	Q	And I'll come
17	A	There'd be no outside parties, other than those
18		that worked for Mr. Milgaard, that would be asking
19		these types of questions.
20	Q	No, and I'll get back to your reasons for doing
21		so, and we'll get into that in detail. I'm just
22		trying to establish that what I thought you told
23		me is that you made a decision to provide
24		information on internal police matters, or what
25		was happening on the matter, to people assisting
		•

1		David Milgaard, and that you knew that it was not
2		appropriate or it was against police regulation to
3		be providing that information; is that fair?
4	А	I wasn't certain that it was inappropriate, I just
5		took that position myself, that
6	Q	Okay.
7	A	To be cautious.
8	Q	Okay, then let's put it on this basis, information
9		that you believed it might be inappropriate to
10		share with third parties; is that fair?
11	A	Yes.
12	Q	Okay. So, again, we have a category of
13		information that would be known to city police
14		officers and not known outside the city police
15		service, and you say you were concerned that it
16		might not be appropriate to share it, and so you
17		took the precautions; correct?
18	A	Yes, sir.
19	Q	So that when I talk about 'confidential
20		information' that's what I am referring to, that
21		type of information that only police officers
22		would know unless a police officer told someone,
23		do you understand?
24	A	Yes.
25	Q	Okay. And I want to know whether that
		4

	<u> </u>
	information, whether you provided who you
	provided that to. You've told me you provided it,
	I think, to Mr. Asper; is that right?
А	That's correct.
Q	Did you provide any of that to Mr. Wolch?
А	No, sir.
Q	Did you provide any to Paul Henderson?
А	Yes, sir.
Q	And to Greg Rodin?
А	Yes, sir.
Q	David Roberts?
А	There is information that I would have provided to
	Rodin and to Asper that I wouldn't provide to
	Roberts. The information that I provided to
	Roberts was general information.
Q	Okay. So you were prepared to provide Asper and
	Rodin with more information than you were prepared
	to provide Roberts; is that right?
А	Absolutely, sir.
Q	And why is that?
А	Well, they were lawyers, and they assured me that
	I had lawyer/client privileges.
Q	All right. Did you ask Mr. Asper whether there
	was anything inappropriate with you providing this
	information to him?
	Q A Q A Q A Q A Q A

		Page 22157 —————
1	A	No, sir.
2	Q	Why did you decide to provide this information to
3	_	non-police members?
4	A	Because I strongly believed that David Milgaard
5		was innocent
6	Q	And
7	A	and as a police officer, I just felt it was my
8	71	duty to do what I could. As a police officer and
9		as a Christian it was my obligation to see an
10		innocent man get set free.
11	Q	Did you at any time go to anybody else in the
12		Saskatoon City Police Service with your concerns
13		and say "lookit, I think there's an innocent man
14		convicted, we should do something about it"?
15	A	No, sir.
16	Q	Why not?
17	A	At that time Joe Penkala was the chief of police,
18		and Joe Penkala and I were not getting along.
19	Q	And I'll go through some documents in a moment,
20		sir, that I understand that there were a number of
21		run-ins, for lack of a better word, between you
22		and administration in the late '80s and early
23		'90s; is that fair?
24	А	That's correct.
25	Q	And is that one of the reasons, Mr. Vanin, that

1		you decided to share this information with David
2		Asper and Paul Henderson and Mr. Roberts, was your
3		dealings with Mr. Penkala?
4	A	I knew I wouldn't get any assistance from Penkala
5		or the administration, so and, again, I just
6		believed so strongly that David Milgaard was
7		innocent and I just felt obliged, as a police
8		officer, to help where I could help.
9	Q	But, again, the question is the reason you didn't
10		go to administration and to the chief with your
11		concerns, was it related to the fact that you had
12		other unrelated issues with Mr. Penkala, ongoing
13		disputes with Mr. Penkala; is that fair?
14	А	That's fair, and plus the fact I had no confidence
15		in Penkala whatsoever, and most members didn't
16		have any confidence in him, and nor would we get
17		anywhere if we went with information to him, I
18		think he would just put a stop on it.
19	Q	And why do you say that?
20	A	Just for working with the man or working for
21		the man. He just decimated the police department
22		when he took over. We had what was considered one
23		of the best police forces in Canada, and when he
24		took over he just slashed all the specialized
25		units, and it seemed to us that his only objective
	I	

1		was to save as much money and return as much money
2		to the Commission as possible.
3	Q	If let's go back to the early '90s, whatever
4		the time frame is when you began to share police
5		information with outside parties, and I think you
6		said '90-'91, in that time frame; is that fair,
7		that time frame?
8	A	That time frame, but I think it was as early as
9		the '80s.
10	Q	Sure. And we'll go over some documents that might
11		assist you. Whatever the time frame, if there had
12		been a different chief in place with the Saskatoon
13		City Police, would you have gone to that chief
14		with the information and the concerns you had
15		about David Milgaard and his innocence?
16	А	Yes, sir. When I was in major crime my boss was
17		Deputy Chief Huey Fraser, and he is the best man I
18		ever worked for, and I consider him the best
19		police officer I ever met, and I certainly would
20		have gone to him with this information, and I know
21		that he would have given me the green light to go
22		and assist.
23	Q	Okay. And why didn't you go to him?
24	А	He was retired.
25	Q	But before he retired?
	I	

1	A	This did not come to light. He had already
2		retired before this started to surface.
3	Q	Okay. I think you told us earlier, though, from
4		1970 onward you had concerns about David
5		Milgaard's innocence?
6	A	That was my own personal concerns, I had no, no,
7		no evidence whatsoever, just it was just a gut
8		feeling that I had and information that I got from
9		senior detectives that a lot of them didn't feel
10		right about this conviction.
11	Q	When did Mr. Fraser retire; in the late '70s?
12	A	I'm not I'm not certain, sir.
13	Q	And, again, what what would have caused you to
14		go in, and whatever, let's say 1990, and I know
15		you are not pinning it down on a date, let's just
16		take that for an example. What was happening in
17		1990 that would cause you to go or let me back
18		up. I think you said in 1990, if Hugh Fraser had
19		been the chief, you would have gone to him; why
20		didn't you go to someone in 1970, or 1975, or
21		1980, or 1985, what was the reason it wasn't until
22		1990 or thereabouts?
23	A	Because none of this information was coming to
24		light. It's only after Mrs. Milgaard got some
25		assistance and we started the investigation and
		<b>a</b> 1

1		articles started appearing in different papers and
2		it started to snowball and it appeared that she
3		was on the right track, and her, her lawyers and
4		her assistants were on the right track. This did
5		not come about in the '70s.
6	Q	Okay. But, again, and I thought you said earlier
7		that even back in 1970 you thought he was
8		innocent, and I guess I'm trying to understand or
9		have you explain what and I'm not, I don't
10		intend to fault you for this, Mr. Vanin but if
11		you felt that from 1970 to 1990 what would it be,
12		20 years later, that caused you to do something
13		that you didn't do in the previous 20 years?
14	А	I think I just answered that question, is because
15		of what Mrs. Milgaard had started, and new
16		evidence started to come to light, and
17	Q	Okay.
18	A	from talking to the news media and all these
19		phone calls that I was getting from them. I
20		didn't get any of that in the '70s.
21	Q	Now, and again you may have touched on this, if it
22		had been somebody other than Chief Penkala that
23		had been chief at the time when you actually did
24		go and give this information outside the police
25		force, someone that you trusted, would you have
		Mayor CompuCount Reporting

1		gone to the chief with your concerns as opposed to					
2		providing it to outside parties?					
3	A	Certainly.					
4	Q	Now I just want to go through, Mr. Vanin, briefly					
5		some of the documents that detail the proceedings					
6		that you had in the late '80s/early '90s. These					
7		were documents that the RCMP collected as part of					
8		their investigation and I just want to go through					
9		them with you. The first is 054574. And this is					
10		a letter from Inspector Quinn in 1993 to Inspector					
11		Murray Sawatzky. Now you know Inspector Quinn; is					
12		that right?					
13	А	Yes, sir.					
14	Q	Yeah, and I think you had a chance to read through					
15		this letter in the last couple of days; is that					
16		right?					
17	А	Yes, sir.					
18	Q	This is a summary of it's a service profile,					
19		and I'll go through parts of this, but generally I					
20		think, are you able to say this is accurate? And					
21		I can go through parts of it with you if you would					
22		like to wait until we go through it.					
23	A	I read this document and the majority of it is					
24		accurate.					
25	Q	Okay. And I just want to touch on a couple of					

1		parts because I think this might summarize some of				
2		the issues that would it be fair to say that				
3		prior to let's just get a time frame. I think				
4		it was the late '80s, maybe what year was your				
5		automobile accident, was it '80				
6	A	1986 I had two accidents, and one was a very				
7		serious accident. It was a high-speed chase, I				
8		was on duty, and the patrol car was rammed twice				
9		and involved in a head-on collision with the				
10		culprit, which resulted in very severe injuries to				
11		me.				
12	Q	And then I think you were off work for a lengthy				
13		time period; is that right?				
14	А	I was off work for approximately a year.				
15	Q	And then some issues arose regarding your return				
16		to work, and would that be, if I could call it,				
17		the start of issues between you and				
18		administration, and in particular Mr. Penkala; is				
19		that fair?				
20	А	That's what caused the rift, yes.				
21	Q	Yeah. And prior to that, at least looking from				
22		this document, prior to that it looks as though				
23		from this letter and I'd ask you to confirm				
24		it that there were no, no issues or very few				
25		issues between you and administration or the force				

1 generally; is that fair? 2 Α The police force was extremely good to me, I loved being a police officer, I think I was a very good 3 police officer. And I loved the work, I had good 4 5 job satisfaction, and it was until this accident arose and this injury, and then I started to -- I 6 felt I was being harassed by administration, and 8 particularly Penkala, for not returning to work. 9 And I'll give you one example. 10 I was in City Hospital waiting 11 to go in for I believe it was a CT scan, and Joe 12 Penkala was in there, apparently he fell off a 13 ladder and broke his ankle or something, and he 14 told me there, he says, "I think it's time you got 15 back to work" is what he said directly to me in 16 the waiting room when both of us were waiting for 17 medical treatment. 18 And apart from Penkala, were there any other Q 19 specific officers that you had issues with at the 20 time in administration, or was it just 21 Mr. Penkala? 22 Well, you always have some issues with some 23 officers, but nothing that -- you don't hold 24 grudges forever. 25 If we can just go to the next page, and I Q Meyer CompuCourt Reporting =

just want to go through parts of this, because it might shed some light on some matters. again, this is Inspector Quinn writing to Inspector Sawatzky in 1993, and I think Inspector Sawatzky had asked Inspector Quinn just to give a summary of your career with the police, and it says here:

> "Staff Sergeant Vanin was noted by his supervisors and, on some occasions, by Crown Counsel as being a very intelligent and excellent investigator. He had noted successes with a number of major investigations, including homicides, during his tenure in the Detective Division. He also worked very closely in investigations with Detective E. Karst and senior investigators assigned to those divisions during the period of time that Vanin served there. He also had a reputation of being very protective of his information and very protective of what he was working on including documentation of his reports. He did not associate with a large number of members on duty and kept considerably

20

to himself."

Now that's someone else's words, but is that, do you agree with that characterization? Yes.

Q Now if we could just scroll down, I think this talks, it may summarize the following years. Ιt says:

> "Upon being transferred to the traffic division in 1985, he worked as a Supervisor in this area. During the mid summer of 1986 Staff Sergeant Vanin was involved in a motor vehicle accident while operating a Patrol car and sustained injuries to his back and neck Subsequent problems occurred areas. after this accident which resulted in excessive loss of work through the injuries and other medically related problems. The time off became a major source of aggravation for, not only Staff Sergeant Vanin, but also with the Department in attempting to ascertain when Vanin could return to work. This issue was the subject of a number of exchanges between Vanin and the

25

1

2

3

4

5

Α

Administration of the Saskatoon Police
Service at that time. Vanin did not
return to duty for approximately one
year, after which there continued to be
an additional number of lengthy
illnesses which were directly related to
his back problems and other medical
problems Vanin was suffering from. This
absence from duty and what appeared to
be a reluctance on Vanin's part to
return to duty, continued to become a
problem for both the Administration and
Staff Sergeant Vanin."

#### It says:

"During this period of 1988 there was a request by not only Vanin, but one of the Inspector, to have Vanin transferred to a plainclothes unit, however, this apparently appeared to have been denied. It was also during the period commencing in 1988 that a number of disciplinary issues came to light. In April of 1988 Vanin filed a complaint against his Staff Sergeant at that time, Staff Sergeant Martin, for Abusive Language

1		and Neglect of Duty. At the same time a					
2	complaint was laid against Vanin by the						
3	Staff Sergeant for Insubordination,						
4		subsequently resulting in a Written					
5		Warning. The matter was appealed and					
6		the appeal granted."					
7		Now is that an accurate summary of those events?					
8	А	There are a number of mistakes there, or a couple					
9		mistakes.					
10	Q	Sure. If you could point them out?					
11	A	Could you back up to the					
12	Q	Sure.					
13	A	Just it says:					
14		" involved in a motor vehicle					
15		accident while operating a patrol car					
16		",					
17		I was not operating the patrol car, I was a					
18		passenger in the patrol car.					
19	Q	And anything else?					
20	A	Well, I certainly don't agree with the very last					
21		sentence:					
22		"This absence from duty and what					
23		appeared to be a reluctance on Vanin's					
24		part to return to duty,"					
25	Q	Would it be fair to say that there was a					

1		disagreement between you and administration as to
2		whether you were fit to return to work; is that
3		fair?
4	A	Oh, I was following the advice of my doctors.
5	Q	Oh, and I don't want to get into which would
6		you agree that there was an issue? You were
7		saying "I'm not prepared to go back to work", and
8		administration was saying that you were, was that
9		a fair summary of it, there was a dispute about
10		your medical fitness to return to work?
11	А	No, that's not correct. I was prepared to return
12		to work depending on what assignment they would
13		give me.
14	Q	Okay.
15	A	And
16	Q	There was a dispute over that?
17	A	Yes.
18	Q	Okay. So there was a dispute related to the
19		manner in which you would return to work; is that
20		fair?
21	A	Or the assignment.
22	Q	The assignment
23	A	And my specialist made it perfectly clear that if
24		I was, if I was involved in another accident or in
25		a serious scuffle or a violent arrest, that the
		Meyer CompuCourt Reporting ————————————————————————————————————
		Certified Professional Court Reporters serving P.A. Regina & Saskatoon since 1980

1		injuries to my neck could result in paralysis.				
2	Q	Okay. If we can just scroll down to the next				
3		paragraph. Was there anything else there, I'm				
4		sorry, Mr. Vanin, that you wanted to point out?				
5	А	No, sir.				
6	Q	And then this paragraph here about the complaints,				
7		issues with Staff Sergeant Martin, etcetera, is				
8		that accurate?				
9	A	No, that's not accurate. Martin left a report				
10		against me, Martin advises me that he was ordered				
11		by Inspector Wilton to leave that report and				
12		charge me with neglect of duty or				
13	Q	There was issues between you and Mr. Martin; is				
14		that fair, and Mr. Wilton?				
15	A	No, actually his nickname was Smokey, Smokey				
16		Martin and I were actually good friends, and he				
17		came to me after, he said he only did that because				
18		he was ordered to do that by Wilton.				
19	Q	So a complaint was filed I mean, I don't want				
20		to get into debating over who was right or who was				
21		wrong, I simply want to understand and just				
22		identify, Mr. Vanin, that there were issues and				
23		generally the nature of the issues, and I				
24		appreciate, sir, that you, I'm sure, have strong				
25		views about your position on those issues; is that				

		rage 22 Tri					
1		fair, and that they are probably not the same					
2		views as administration?					
3	A	That would be fair.					
4	Q	So if we can again, can we leave that paragraph					
5		as setting out one of the issues that existed?					
6	A	Yes.					
7	Q	Okay. Just go down to the next paragraph, it					
8		says:					
9		"Also in 1988 there was a complaint laid					
10		against Inspector Wilton by Staff					
11		Sergeant Vanin regarding an Assault and					
12		Abusive Conduct. During 1989 the charge					
13		of Neglect of Duty was laid against					
14		Staff Sergeant Vanin which specifically					
15		indicated he had left his assigned area					
16		without permission, for which 9					
17		convictions were registered."					
18		And again I'll touch on some of those materials					
19		later because I think that ended up in some court					
20		proceedings; is that right?					
21	A	That's correct.					
22	Q	And if we can just scroll down, it says:					
23		"There was a long period of appeals to					
24		the Saskatoon Board of Police					
25		Commissioners and also the Saskatchewan					

1 Police Commission which eventually 2 resulted in Vanin being initially 3 demoted to the rank of Corporal and subsequently reinstated to the rank of 4 5 sergeant to be returned to his position held prior to the sentencing of the 6 conduct charges under the "Police Act". 8 At that time Vanin was assigned back to 9 the Major Crime Unit where he remained 10 until his transfer to the Crime Index 11 position. This appeal was heard and a 12 decision rendered on January 17, 1991, 13 by chairman of the Provincial Police 14 Commission R.D. Lang, Q.C." 15 And I'll go to those materials a bit later, but 16 is that correct, you had a prolonged dispute 17 over -- I think Deputy Chief Wagner had a 18 disciplinary proceeding, found you -- registered 19 nine convictions, you went to the Police 20 Commission, you went to the Court, I think you 21 went back to the Police Commission and to the 22 Court, something like that; is that --23 Α Yes. And that would be 1990 -- '89, '90, '91; is that 24 25 correct?

	7 dgc 22 77 3					
1	А	Yes.				
2	Q	And then if we can go to the next page				
3	A	I would just like to note that Mr. Laing, who was				
4		the chairman of the Provincial Police Commission,				
5		totally reinstated me and reinstated my rank and				
6		my position after the hearing.				
7	Q	Yeah, and I'll just identify those documents in a				
8		moment. And then lastly here:				
9		"In addition, there was conflict in 1990				
10		between Staff Sergeant Vanin and an				
11		Inspector Ed Grabowski, in which Vanin				
12		laid a complaint against Grabowski for				
13		doing personal business on company time				
14		and perjury. The complaint laid was				
15		subsequently found not to be				
16		substantiated."				
17		It's my understanding the perjury charge related				
18		to his evidence given in your disciplinary				
19		proceeding; is that right?				
20	A	That's correct.				
21	Q	And again, if we can call up 223639, and again				
22		this is a document from the public record, and I				
23		think this is one of the Court applications				
24		brought, if you could just go to the next page,				
25		please, again we won't spend much time on this,				
	ÍI.					

but this shows April 24th, 1991, an application under the Police Act for disciplinary proceedings, and this would be relating to those convictions registered by Deputy Chief Ken Wagner; is that right?

A That's correct.

Q

And again I don't propose -- actually, if you can just scroll down, it talks about the order of Chief Wagner on August 2nd, 1990, so that looks like the first decision, and then the next page, it says he found you guilty of nine counts of neglect of duty and this is an application to the Court for relief.

And then if we could go to 333243, please, and again this is for the benefit of counsel, this is just a copy of a Court decision July 18th, 1991, and I'm not sure if this relates to the earlier motion, but this is an application brought to Court naming Joe Penkala and the Police Commission as a Respondent, and I think you were appealing a decision and he was appealing a decision, and just a couple of things. So that would be the date this decision was handed down, July 18th, 1991; is that correct?

A I'm not certain, but --

1	Q	I'm telling you that's what the Court document					
2		says.					
3	A	Yeah, I see that.					
4	Q	Just go to the next page, I can just briefly touch					
5		on a couple of parts here. Again it talks about a					
6		hearing into the offences presided by Chief Wagner					
7		and then you appealed the convictions, not the					
8		sentence. The board dismissed the appeal, but					
9		increased the penalty by demoting Sergeant Vanin					
10		to the rank of corporal. Vanin then appealed to					
11		the Saskatchewan Police Commission. On January 25					
12		Laing dismissed the appeal, allowed the appeal					
13		against sentence and ordered you to be restored to					
14		the position of supervisor in major crime. Then					
15		it says here on January 28, 1991, the first					
16		working day after the Commission's order, Sergeant					
17		Vanin was assigned by Chief of Police Joseph					
18		Penkala to a platoon patrol instead of being					
19		restored to acting supervisor of major crime and					
20		then went on to appeals. Is that accurate?					
21	A	Yes.					
22	Q	So can I summarize that, that after you went					
23		through these appeal proceedings, the Police					
24		Commission upheld the conviction but said you					
25		should go back to the position of restore your					

		. ago <u></u> o
1		rank and then when you got back to work Chief
2		Penkala moved you to platoon patrol; is that
3		right?
4	A	That's correct.
5	Q	And I take it platoon patrol would be a demotion
6		from major crimes? Well yeah, a demotion from
7		major crimes?
8	А	Well, it held the same rank, but certainly didn't
9		hold the same status in my opinion.
10	Q	And were you upset when Chief Penkala moved you to
11		platoon patrol?
12	А	Certainly.
13	Q	And is that in part what prompted these
14		proceedings? I think you then took legal
15		proceedings to try and challenge those; is that
16		correct?
17	A	I'm not sure. I very well could have.
18		MR. HODSON: This is probably an
19		appropriate spot to break. It's four o'clock,
20		Mr. Commissioner.
21		COMMISSIONER MacCALLUM: Thank you.
22		(Adjourned at 3:58 p.m.)
23		
24		
O.E.
