November Estimate of 2014 Crop Production

Statistics Canada's November production survey of principal field crops estimates 2014 Saskatchewan production at 30.7 (million metric tonnes). The survey was conducted with 26,200 Canadian farmers and was conducted from October 22 to November 13, 2014. In Saskatchewan, 7,110 farmers were surveyed.

Total wheat production is estimated at 14.2 mmt – up 0.8 mmt from the September survey and 16% above the 2004-13 average. **Spring wheat** production is estimated at 9.2 mmt, down 25% from 2013, and up 15% from the 10-year average. **Durum** production is estimated at 4.5 mmt, down 20% from 2013, and up 15% from the 10-year average. Prairie Spring, Extra Strong, Soft White and other wheat classes make up 1.3 mmt or 15% of the spring wheat production.

Coarse grain output is estimated at 3.8 mmt – up 301,800 tonnes from the September survey and 29% below the 2004-13 average. **Barley** production is estimated at 2.2 mmt, compared to 3.4 mmt last year and 39% below the 2004-13 average. **Oats** production is estimated at 1.6 mmt, down 33% compared to 2013 and 6% below the 10-year average. **Fall rye** production, at 80,300 tonnes, is 13% above 2013 production and 34% below the 10-year average. **Triticale** production is estimated at 16,300 tonnes, up 28% from 2013 and 22% below the 10-year average.

Oilseed production is estimated at 8.6 mmt – up 679,400 tonnes from the September survey and 39% above the 2004-13 average. Production of **canola** is estimated at 7.6 mmt compared to 8.9 mmt of production in 2013 and a 10-year average of 5.5 mmt. **Flax** production is estimated at 706,200 tonnes, compared to 584,200 tonnes in 2013 and a 10-year average of 536,100 tonnes. **Mustard** production is estimated at 138,600 tonnes, up 18% from 2013, and up 8% from the 10-year average. **Soybean** production is estimated at 163,300 tonnes, up 38% from 2013.

Pulse crops production is estimated at 3.9 mmt – up 97,600 tonnes from the September estimate and 8% above the 2004-13 average. **Pea** production is estimated at 2.1 mmt compared to 2.6 mmt of production in 2013. **Lentil** production is estimated at 1.8 mmt compared to 2.1 mmt of production in 2013. **Chickpea** production is estimated at 123,000 tonnes, compared to 169,400 tonnes of production in 2013.

Canary seed production decreased 5% from 2013 to an estimated 124,900 tonnes. This is the smallest canary seed crop since 2001.

Estimates of crops seeded in the fall of 2014 (for harvest in 2015) in Saskatchewan were 260,000 acres of **winter wheat** and 100,000 acres of **fall rye** – down 48% for winter wheat and 9% for fall rye from 2013. Delayed harvest and wet fields caused the reduced acres.
