

For the Period August 30 to September 5, 2016

Saskatchewan producers made good progress with harvest, thanks to a week of primarily dry weather. Thirty-two per cent of the crop has been combined and 38 per cent is swathed or ready to straight-cut, according to Saskatchewan Agriculture's Weekly Crop Report. This is ahead of the five-year (2011-2015) average of 28 per cent combined for this time of year.

Regionally, harvest is furthest advanced in the southeast, where producers have 48 per cent of the crop in the bin. Forty-two per cent of the crop is combined in the southwest, 24 per cent in the east-central region, 25 per cent in the west-central region, 22 per cent in the northeast and fourteen per cent in the northwest.

Ninety-four per cent of winter wheat, 85 per cent of field peas, 65 per cent of lentils, 26 per cent of durum, 23 per cent of spring wheat and 17 per cent of canola have been combined.

Yields are estimated to be above the five- and 10-year averages for most crops, with the exception of lentils.

After several dry days, rain showers rolled through the province again on the weekend and have continued into this week.

Harvest Progress in SK Per cent Combined All Crops	
Sept 5/16	32
5 year avg. (2011-2015)	28
Sept 7/15	40
Sept 8/14	14
Sept 2/13	14
Sept 3/12	38
Sept 5/11	32
10 year avg. (2006-2015)	30

Precipitation amounts ranged from nil to 30 mm (Raymore area). Areas in the west-central, northwestern and northeastern regions did not receive as much rain as the rest of the province. The Lampman area reported receiving 24 mm, Langenburg 19 mm, Glenavon and Debden 12 mm and Sonningdale 8 mm.

One year ago
Forty per cent of the provincial crop was combined and an additional 33 per cent was swathed or ready to straight cut. Heavy rain in many areas delayed harvest. Some areas in the south east received over four inches.

Provincially, cropland topsoil moisture is rated as 10 per cent surplus, 84 per cent adequate, five per cent short and one per cent very short. The areas around Kindersley and Tisdale have surplus moisture on 27 and 48 per cent, respectively, of cropland. Hay land and pasture topsoil moisture is rated as four per cent surplus, 85 per cent adequate, nine per cent short and two per cent very short.

Crops are being downgraded because of weathering in the field and higher levels of disease in comparison to other years. There are reports of higher incidences of sclerotinia in canola, fusarium in wheat and durum and bleaching of cereals and pulses. High winds blew some canola swaths around in the southeast.

Producers are busy harvesting and cutting greenfeed crops.

* ' Other wheat' includes all wheat classes other than Hard Red Spring Wheat

** lentil yields vary from 240 lbs/ac to 2400 lbs/ac

Crop yield predictions at this point in time. Please keep in mind these are regional averages, and yields can vary greatly across an area.

Canaryseed, mustard, lentil and chickpea in lbs/ac. All other crops in bu/ac.

Southeastern Saskatchewan:

- Crop District 1 – Carnduff, Estevan, Redvers, Moosomin and Kipling areas
- Crop District 2 – Weyburn, Milestone, Moose Jaw, Regina and Qu'Appelle areas
- Crop District 3ASE – Radville and Lake Alma areas

A few days of warm and dry weather allowed producers to continue with harvest. Forty-eight per cent of the crop has been combined and 29 per cent is swathed or ready to straight-cut. The five-year average for the region is 38 per cent combined. Crop District 1A has 55 per cent in the bin, 1B 37 per cent, 2A 72 per cent, 2B 35 per cent and 3ASE has 55 per cent of the crop combined.

Rain settled in on the weekend and has postponed further harvest operations. The Lampman area received 24 mm of rain, Whitewood 14mm, Broadview 5 mm, Weyburn 17 mm, Regina 20 mm, Marquis 5 mm and Ceylon 10 mm.

Cropland topsoil moisture is rated as six per cent surplus, 77 per cent adequate, 14 per cent short and three per cent very short. Hay land and pasture topsoil moisture is rated as four per cent surplus, 70 per cent adequate, 16 per cent short and 10 per cent very short. Topsoil moisture conditions vary greatly across the region. While Crop District 1B is reporting that 18 per cent of the cropland has surplus topsoil moisture at this time, CD 1A and 3ASE are reporting that 28 and 37 per cent, respectively, of cropland acres are short of topsoil moisture.

Crop damage is mainly attributed to weathering caused by disease and too much moisture. High winds on the weekend blew some canola swaths around. There are reports of high levels of fusarium head blight in the durum crops and sclerotinia in the canola crops. Producers have commented on above-average yields; however, the quality of many crops has been downgraded.

Southwestern Saskatchewan:

- Crop District 3ASW – Coronach, Assiniboia and Ogema areas
- Crop District 3AN – Gravelbourg, Mossbank, Mortlach and Central Butte areas
- Crop District 3B – Kyle, Swift Current , Shaunavon and Ponteix areas
- Crop District 4 – Consul, Maple Creek and Leader areas

Forty-two per cent of the crop has been combined and 26 per cent is swathed or ready to straight-cut. For most of the week, the weather cooperated with harvest. with the rain holding off until the weekend. The five-year average for the region is 46 per cent combined. Crop districts 4A and 3BN did not receive much moisture and are reporting 46 per cent of the crop in the bin. Crop District 4B has 43 per cent combined, 3ASW, 3AN and 3BS have 39 per cent combined. The Liseux area reported 17 mm of rain, Gravelbourg 10 mm and Hazenmore 12 mm.

Cropland topsoil moisture conditions are rated as seven per cent surplus, 90 per cent adequate and three per cent short. Hay land and pasture topsoil moisture is rated as three per cent surplus, 87 per cent adequate, 10 per cent short and one per cent very short.

Most crop damage this week is due to bleaching, sprouting and staining from prolonged wet conditions. Fusarium head blight in cereals and sclerotinia and mould in pulses have been noticed. Yield loss and downgrading are expected for much of the region's pulse crop due to excess moisture and disease. Yields are variable. Pea crops are yielding quite well in the region. Lentil yields are reported to be average to below-average so far, ranging from 240 lb. to 2000 lb. per acre. Desiccated crops are very slow to dry due to high weed infestations. Warm and dry weather is needed to help dry up fields.

East-Central Saskatchewan:

- Crop District 5 – Melville, Yorkton, Cupar, Kamsack, Foam Lake, Preeceville and Kelvington areas
- Crop District 6A – Lumsden, Craik, Watrous and Clavet areas

A dry week for the region allowed producers to double their harvest progress over previous week. They now have 25 per cent of the 2016 crop combined and 26 per cent swathed or ready to straight-cut. The five-year average is 18 per cent combined. Rain at the start of the week postponed field work for a few days. Crop District 6A, with 33 per cent of the crop combined, is furthest advanced with harvest, while crop districts 5A and 5B, with 22 and 18 per cent combined, respectively, are the least advanced. Good progress was made swathing canola. Sixty-six per cent of the crop is cut.

Rain was reported on Monday throughout most of the region. The Raymore area received 30 mm of rain, the Langenburg area 19 mm, Ituna 14 mm, Kamsack and Earl Grey 10 mm and Bethune received 5 mm.

Topsoil moisture conditions on cropland are rated as seven per cent surplus, 90 per cent adequate and three per cent short. Hay land and pasture topsoil moisture is rated as eight per cent surplus, 87 per cent adequate and five per cent short.

The majority of crop damage this past week was the result of wet weather at harvest causing bleaching and lodging. Producers are indicating that yields are above average for most crops; however, crop quality varies, with most crops being downgraded due to disease in crop samples. Some crops are being combined tough and put in dryers and aeration bins. There has been some seeding of winter cereals this week. Warm and dry weather is needed to help dry out topsoil moisture.

West-Central Saskatchewan:

- Crop District 6B – Hanley, Outlook, Loreburn, Saskatoon and Arelee areas
- Crop District 7A – Rosetown, Kindersley, Eston, Major
- Crop District 7B - Kerrobert, Macklin, Wilkie and Biggar areas

Good harvest progress was made during the week as most areas missed the rain showers that fell on the rest of the province. Twenty-five per cent of the crop is in the bin and 37 per cent is swathed or ready to straight-cut. The regional five-year average for this time of year is 23 per cent combined. Crop District 6B, with 32 per cent of the crop combined, is furthest ahead with harvest, while CDs 7A and 7B have only 17 and 25 per cent combined, respectively. Sixty per cent of the canola is swathed.

A few areas reported light showers throughout the week that stalled harvest somewhat. The Dinsmore area recorded 6 mm of rain, Sonningdale 2 mm and Kindersley 4 mm. Most other areas reported no rain or only trace amounts.

Topsoil moisture conditions on cropland are rated as 13 per cent surplus and 87 per cent adequate. Hay land and pasture topsoil moisture is rated as six per cent surplus, 92 per cent adequate and two per cent short. Crop District 7A is reporting that 26 per cent of cropland has surplus topsoil moisture.

Many crops are maturing quickly and are ready for harvest, but wet weather is slowing down harvest operations. Weeds in lentil and pea crops are slow to dry down. There are many reports of high levels of sclerotinia, blackleg, fusarium head blight and mould in pulse crops. Late rains have caused bleaching in some of the swathed and standing cereals crops. Dryers and aeration bins are being used on crops that were combined tough this past week.

Northeastern Saskatchewan:

- Crop District 8 – Hudson Bay, Tisdale, Melfort, Carrot River, Humboldt, Kinistino, Cudworth and Aberdeen areas
- Crop District 9AE – Prince Albert, Choiceland and Paddockwood areas

A dry week in the area resulted in great harvest progress for the region. Twenty-two per cent of the crop has been combined and 53 per cent is swathed or ready to straight-cut. The five-year average for this time of year is 13 per cent combined. Crop District 9AE, with 34 per cent of the crop combined, is furthest ahead with harvest; Crop District 8B has 23 per cent combined and 8A has 19 per cent combined. Sixty-eight per cent of the canola has been swathed.

With only a few exceptions, most areas reported no rain or only trace amounts for the week. The Porcupine Plain area reported 6 mm of rain and Humboldt 5 mm.

Cropland topsoil moisture conditions are rated as 22 per cent surplus and 78 per cent adequate. Hay land and pasture topsoil moisture is rated as 10 per cent surplus and 90 per cent adequate. Crop District 8A (Tisdale, Arborfield and Porcupine Plain areas) is reporting that 48 per cent of cropland has surplus topsoil moisture at this time.

Most crop damage this past week is attributed to wet harvest weather. Some crop yields are down in areas that were flooded during the summer. Field conditions remain quite wet and equipment is getting stuck.

Northwestern Saskatchewan:

- Crop District 9AW – Shellbrook, North Battleford, Big River and Hafford areas
- Crop District 9B – Meadow Lake, Turtleford, Pierceland, Maidstone and Lloydminster areas

Good harvest progress was made in the region and producers now have 14 per cent of the crop combined. A week of unsettled weather produced very light rain showers in many areas, just enough to slow harvest operations. The five-year average is 12 per cent

combined. Fifty-four per cent of the crop is swathed or ready to straight-cut. Crop District 9AW has 17 per cent of the crop in the bin, while CD 9B reports 12 per cent combined. Seventy-three per cent of the canola is swathed in the region.

Precipitation ranged from nil to 12 mm in the Debden area. The Speers area received 8 mm of rain, Barthel 9 mm and the Meadow Lake area 3 mm.

Cropland topsoil moisture is rated as eight per cent surplus, 88 per cent adequate and four per cent short. Hay land and pasture topsoil moisture is rated as 92 per cent adequate and eight per cent short.

There was a slight frost on the weekend with temperatures dipping down to -2 C in the Glaslyn and Meadow Lake areas; however, very little crop damage is expected. The late-season rains have caused some staining in pea crops and bleaching in cereal crops. Most producers have indicated that they are anticipating good yields. Many of the crops harvested last week were put into dryers or aeration bins. The majority of crop damage this past week was due to rain, which has caused some downgrading in the field.

Saskatchewan Harvest Progress - Sept 5, 2016

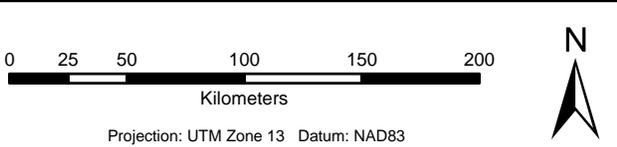

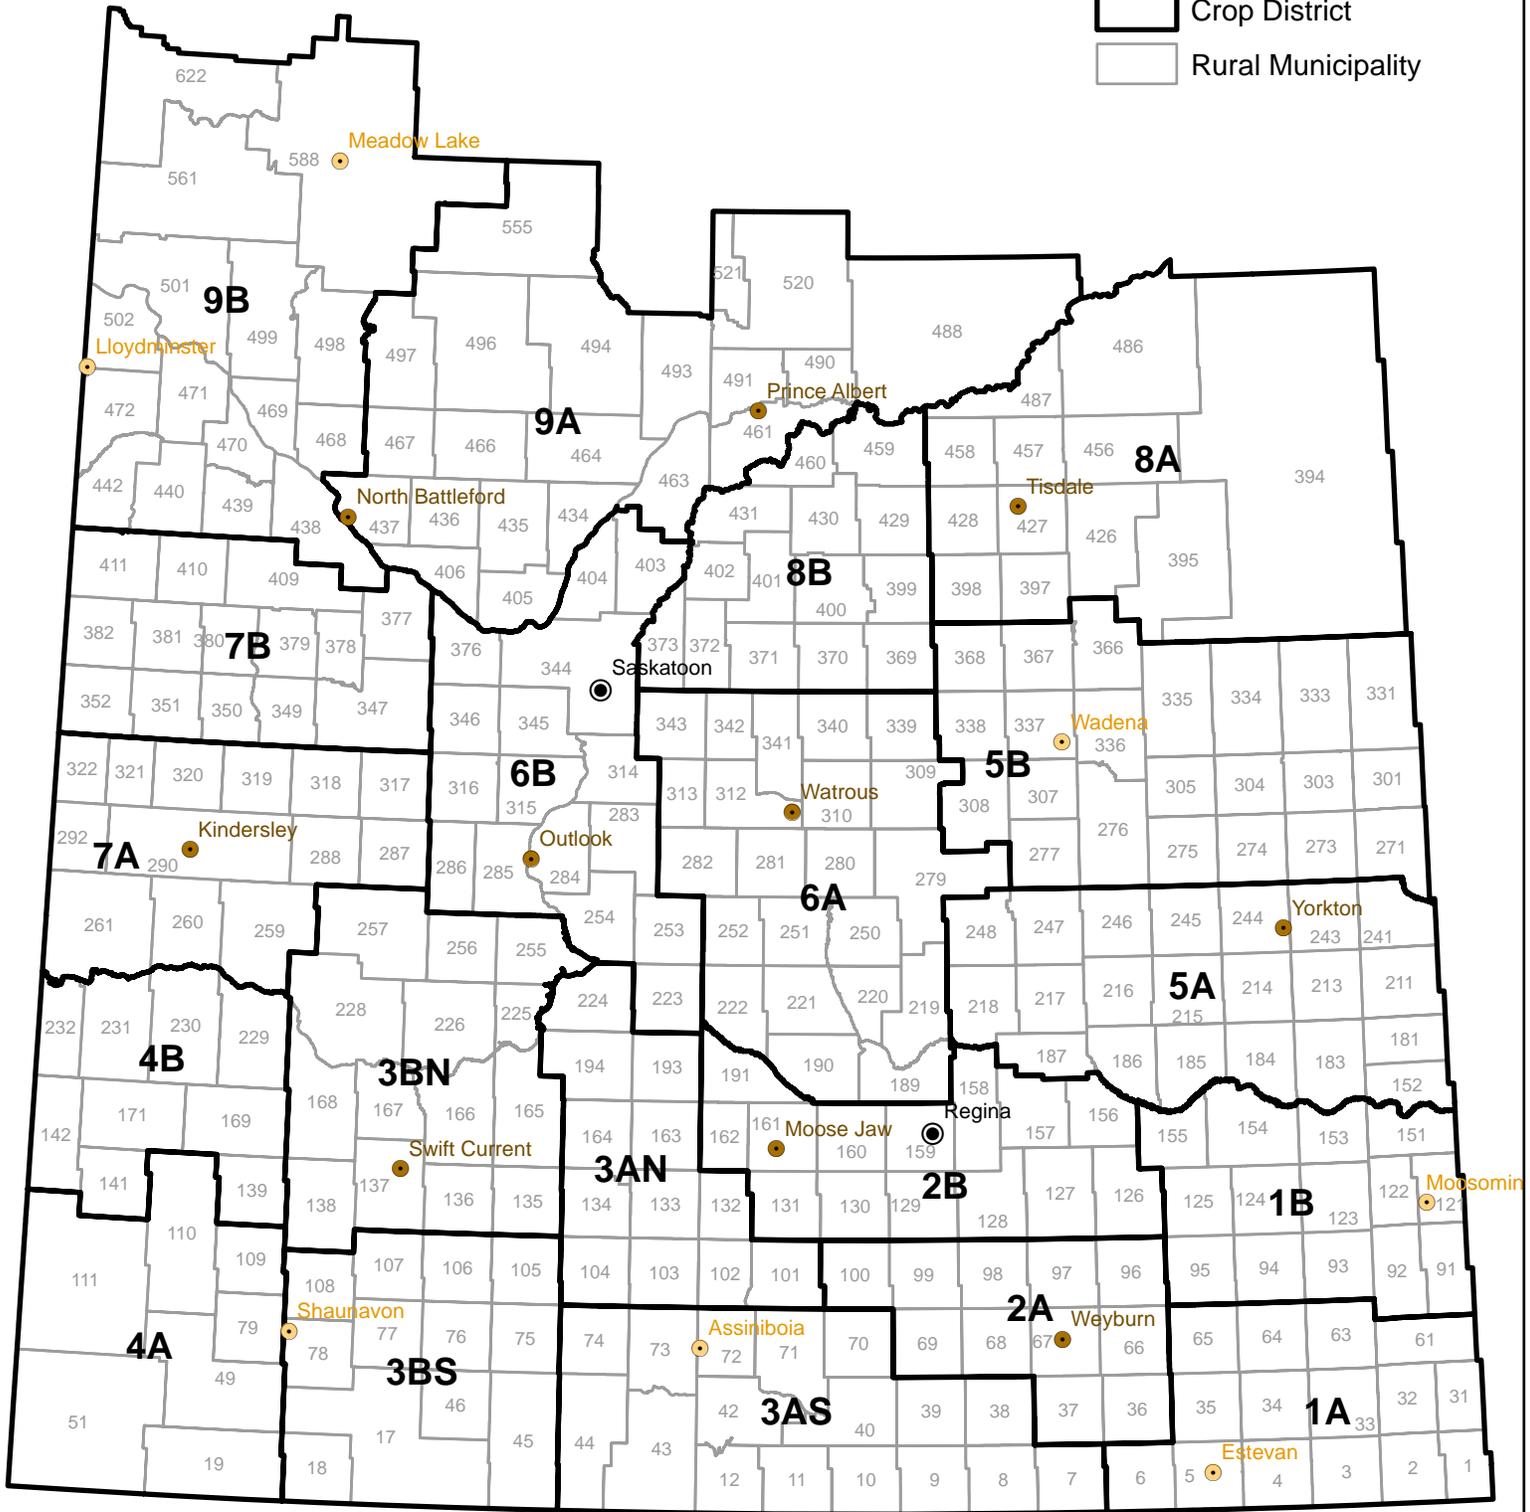

*Other - crop that will not be harvested due to weather, insect or disease damage or will be greenfeed
