

## For the Period September 6 to 12, 2016

Rain slowed harvest in most areas of the province last week. The most progress was made in parts of the west-central and northeastern regions, where spotty rain showers allowed producers to continue working in the field for a day or two. Thirty-eight per cent of the crop has been combined and 38 per cent is swathed or ready to straight-cut, according to Saskatchewan Agriculture's weekly Crop Report. The five-year (2011-2015) average for this time of year is 44 per cent combined.

Regionally, harvest is furthest advanced in the southeast, where producers have 52 per cent of the crop in the bin. Forty-seven per cent of the crop is combined in the southwest, 29 per cent in the east-central region, 35 per cent in the west-central region, 33 per cent in the northeast and 17 per cent in the northwest.

Ninety-seven per cent of the winter wheat, 89 per cent of the field peas, 72 per cent of the lentils, 30 per cent of the durum, 29 per cent of the spring wheat and 25 per cent of the canola have been combined.

Durum grades are being reported as two per cent 1 CWAD, 17 per cent 2 CWAD, 30 per cent 3 CWAD and 51 per cent 4 and 5 CWAD. Pea grades are 25 per cent 1 CAN, 59 per cent 2 CAN, 15 per cent 3 CAN and one per cent Sample grade. Lentil grades are four per cent 1 CAN, 42 per cent 2 CAN, 43 per cent 3 CAN and 11 per cent Sample grade.

Precipitation ranged from nil to 43 mm in the Frobisher area. The Maryfield area reported receiving 36 mm of rain, Eyebrow 32 mm, Foam Lake 42 mm, Nether Hill 26 mm and Porcupine Plain 36 mm. Provincially, cropland topsoil moisture is rated as 14 per cent surplus, 84 per cent adequate and two per cent short. In areas around Porcupine Plain, Tisdale and Arborfield,

### One year ago

Wet field conditions delayed harvest. Fifty-two per cent of the crop had been combined. Some areas reported frost but crop damage was minimal as crops were mature.

Also available on the Ministry of Agriculture website at [www.saskatchewan.ca/crop-report](http://www.saskatchewan.ca/crop-report).

62 per cent of cropland acres are reported to have surplus moisture. In areas around Rosetown, Kindersley and Biggar, 22 per cent of cropland acres have surplus moisture. Hay land and pasture topsoil moisture is rated as eight per cent surplus, 86 per cent adequate and six per cent short.

Frost was reported in some areas in the northwest, with temperatures dipping to -2C; however very little crop damage is expected as the majority of crops are mature. Wet harvest weather continues to cause downgrading in crops. Bleaching, sprouting, fusarium and earth tag are causing grade loss.

Producers are busy harvesting and seeding winter wheat.

**Southeastern Saskatchewan:**

- Crop District 1 – Carnduff, Estevan, Redvers, Moosomin and Kipling areas
- Crop District 2 – Weyburn, Milestone, Moose Jaw, Regina and Qu'Appelle areas
- Crop District 3ASE – Radville and Lake Alma areas

Fifty-two per cent of the crop has been combined and 27 per cent is swathed or ready to straight-cut. The five-year average for the region is 55 per cent combined. Crop District 1A has 59 per cent in the bin, 1B 47 per cent, 2A 74 per cent, 2B 41 per cent and 3ASE has 57 per cent of the crop combined.

Rain throughout most of the week stalled many field operations. The Frobisher area reported 43 mm of rain, Maryfield area received 36 mm, Grenfell and Radville 18 mm, Weyburn 17 mm and Moose Jaw 30 mm.

Grades of durum crops in the region are estimated as three per cent 1CWAD, 16 per cent 2 CWAD, 31 per cent 3CWAD and 50 per cent 4 and 5 CWAD. Estimated grades for peas are 25 per cent 1 CAN, 66 per cent 2 CAN and nine per cent 3 CAN. Grades for lentils are estimated at seven per cent 1 CAN, 54 per cent 2 CAN, 34 per cent 3 CAN and five per cent Sample grade.

Cropland topsoil moisture is rated as 11 per cent surplus, 86 per cent adequate and three per cent short. Hay land and pasture topsoil moisture is rated as eight per cent surplus, 83 per cent adequate and nine per cent short. Moisture conditions vary greatly across the region. Crop District 1B is reporting that 32 per cent of the cropland has surplus topsoil moisture at this time.

Crop damage is mainly attributed to weathering caused by disease and too much moisture. Downgrading is due to bleaching, sprouting and fusarium. Producers have commented on above-average yields. Some pea crops have graded better than previously thought.

**Southwestern Saskatchewan:**

- Crop District 3ASW – Coronach, Assiniboia and Ogema areas
- Crop District 3AN – Gravelbourg, Mossbank, Mortlach and Central Butte areas
- Crop District 3B – Kyle, Swift Current, Shaunavon and Ponteix areas
- Crop District 4 – Consul, Maple Creek and Leader areas

Forty-seven per cent of the crop has been combined and 22 per cent is swathed or ready to straight-cut. A wet week brought many combines to a halt in the region. The five-year harvest average for the region is 62 per cent combined. Crop District 3ASW is reporting 43 per cent of the crop is in the bin, 3AN has 39 per cent combined, 3BS has 41 per cent combined, 3BN 53 per cent and 4A and 4B have 63 and 47 per cent combined, respectively.

The Bengough area reported 25 mm of rain during the week, the Eyebrow area 32 mm, Hazenmore 21 mm, Rush Lake 29 mm, Maple Creek 19 mm and Gull Lake 10 mm. Grades of durum crops in the region are being reported as two per cent 1 CWAD, 17 per cent 2 CWAD, 30 per cent 3 CWAD and 51 per cent 4 and 5 CWAD. Estimated grades for peas are 27 per cent 1 CAN, 58 per cent 2 CAN, 14 per cent 3 CAN and one per cent Sample grade. Estimated lentils grades are reported as five per cent 1 CAN, 49 per cent 2 CAN, 38 per cent 3 CAN and eight per cent Sample grade.

Cropland topsoil moisture conditions are rated as 13 per cent surplus, 85 per cent adequate and two per cent short. Hay land and pasture topsoil moisture is rated as six per cent surplus, 89 per cent adequate, four per cent short and one per cent very short. Crop districts 3BN and 4B are reporting 30 and 25 per cent of the crop land acres have surplus moisture.

Most crop damage this week is due to bleaching, sprouting and staining due to prolonged wet conditions. Downgrading of the durum crop is mostly due to fusarium head blight. Hail was reported in the Limerick and Moose Jaw areas that caused some damage to standing canola crops. Yields are variable across the region, but generally producers are happy with the yields that are coming out of most crops, with the exception of lentils.

**East-Central Saskatchewan:**

- Crop District 5 – Melville, Yorkton, Cupar, Kamsack, Foam Lake, Preeceville and Kelvington areas
- Crop District 6A – Lumsden, Craik, Watrous and Clavet areas

Twenty-nine per cent of the crop is in the bin. A week of rain showers and poor drying weather brought most combines to a halt this past week. The five-year harvest average for the region for this time of year is 35 per cent combined. Forty-six per cent of the crops are ready to swath or straight-cut. Harvest is furthest advanced in Crop District 6A, which has 39 per cent combined. Crop districts 5A and 5B have 26 and 20 per cent combined, respectively. Sixty-three per cent of the canola has been swathed.

The Kelliher and Raymore areas reported 20 mm of rain for the week. The Esterhazy area received 14 mm, Foam Lake 42 mm, Pelly and Elfrost 32 mm, Bethune 24 mm and Watrous 6 mm.

Producers are reporting that durum harvested to date is grading three per cent 1 CWAD, 10 per cent 2 CWAD, 34 per cent 3 CWAD and 53 per cent 4 and 5 CWAD. Grades for peas are 16 per cent 1 CAN, 59 per cent 2 CAN, 21 per cent 3 CAN and four per cent Sample grade. Lentil grades are reported as two per cent 1 CAN, 43 per cent 2 CAN, 42 per cent 3 CAN and 13 per cent Sample grade.

Topsoil moisture conditions on cropland are rated as 15 per cent surplus, 83 per cent adequate and two per cent short. Hay land and pasture topsoil moisture is rated as 10 per cent surplus, 85 per cent adequate and five per cent short. Crop District 5B is reporting 20 per cent of cropland acres have excess topsoil moisture at this time.

The majority of crop damage this past week was due to wet weather at harvest causing bleaching and sprouting. Downgrading in durum and wheat is mostly due to fusarium. Field conditions are very wet in some areas and combines are having to drive to the roadside to fill up trucks. Many crops in storage are being aerated.

#### **West-Central Saskatchewan:**

- Crop Districts 6B – Hanley, Outlook, Loreburn, Saskatoon and Arelee areas
- Crop District 7A – Rosetown, Kindersley, Eston, Major
- Crop District 7B - Kerrobert, Macklin, Wilkie and Biggar areas

Thirty-five per cent of the crop is in the bin and 37 per cent is swathed or ready to straight-cut. Scattered showers throughout the week stalled some producers, while others were able to continue and get a few more acres combined. The five-year average for this time of year is 40 per cent combined. Harvest is furthest ahead in Crop District 6B, which has 47 per cent combined, while CDs 7A and 7B have 30 and 26 per cent combined, respectively.

The Outlook area reported 15 mm of rain over the week, Sonningdale 6 mm, Nether Hill 26 mm, Smiley 11 mm, Major 16 mm and Cando 7 mm. Most other areas reported no rain or only trace amounts.

Durum harvested to date is grading 11 per cent 2 CWAD, 18 per cent 3 CWAD and 71 per cent 4 and 5 CWAD. Grades for peas are 20 per cent 1 CAN, 61 per cent 2 CAN, 18 per cent 3 CAN and one per cent Sample grade. Lentil grades are reported as 21 per cent 2 CAN, 59 per cent 3 CAN and 20 per cent Sample grade.

Topsoil moisture conditions on cropland are rated as nine per cent surplus and 91 per cent adequate. Hay land and pasture topsoil moisture is rated as three per cent surplus, 95 per cent adequate and two per cent short. Crop District 7A is reporting that 22 per cent of cropland has surplus topsoil moisture.

Most crops are mature and ready for harvest, but wet weather is slowing down harvest operations. Downgrading in durum is mostly due to high fusarium levels. Rain has caused bleaching in some of the swathed and standing cereals crops. Dryers and aeration bins are being used on crops that were combined tough this past week.

#### **Northeastern Saskatchewan:**

- Crop District 8 – Hudson Bay, Tisdale, Melfort, Carrot River, Humboldt, Kinistino, Cudworth and Aberdeen areas
- Crop District 9AE – Prince Albert, Choiceland and Paddockwood areas

Thirty-three per cent of the crop has been combined and 51 per cent is swathed or ready to straight-cut. The five-year harvest average for this time of year is 30 per cent combined. Eleven per cent of the crop was put into the bin over last week and most of that progress was made in Crop District 8B, which received less rain than other areas. Crop District 8A has 29 per cent of the crop combined, 8B has 36 per cent combined and 9AE has 41 per cent of the crop in the bin.

The Porcupine Plain area reported 36 mm of rain, Tisdale 12 mm, Vonda 3 mm, Humboldt 7 mm and Prince Albert and Garrick 10 mm.

Durum harvested to date is grading five per cent 1 CWAD, 10 per cent 2 CWAD, 10 per cent 3 CWAD and 75 per cent 4 and 5 CWAD. Grades for peas are 19 per cent 1 CAN, 66 per cent 2 CAN and 15 per cent 3 CAN.

Cropland topsoil moisture conditions are rated as 27 per cent surplus and 73 per cent adequate. Hay land and pasture topsoil moisture is rated as 38 per cent surplus, and 62 per cent adequate. Crop District 8A (Tisdale, Arborfield and Porcupine Plain) is reporting that 62 of cropland and 75 per cent of pasture and hay land have surplus topsoil moisture at this time.

Most crop damage this past week is attributed to wet harvest weather. Some crop yields are down in areas that flooded during the summer. Field conditions remain quite wet and equipment is getting stuck. Downgrading in wheat and durum is mostly due to fusarium.

#### **Northwestern Saskatchewan:**

- Crop District 9AW – Shellbrook, North Battleford, Big River and Hafford areas
- Crop District 9B – Meadow Lake, Turtleford, Pierceland, Maidstone and Lloydminster areas

Seventeen per cent of the crop is combined and 62 per cent is swathed or ready to straight-cut. The five-year harvest average for this time of year is 26 per cent combined. Harvest is furthest advanced in Crop District 9AW, which has 21 per cent combined, while 9B has 15 per cent combined.

The amount of rainfall varied throughout the region. The Debden area received 18 mm, Turtleford 8 mm, Barthel 11 mm and Pierceland 14 mm. The Radisson and Speers area reported no rain for the week.

Producers are quite happy with the yield and quality of the pea crop so far. Grades for peas are 48 per cent 1 CAN, 36 per cent 2 CAN and 16 per cent 3 CAN.

Cropland topsoil moisture is rated as one per cent surplus, 95 per cent adequate and four per cent short. Hayland and pasture topsoil moisture is rated as 87 per cent adequate and 13 per cent short.

There was frost late in the week with temperatures dipping down to -2 C in the Radisson, North Battleford and Frenchman Butte areas. Very little crop damage is expected as crops are mature. The late-season rains have caused some staining in pea crops and bleaching in cereal crops. The majority of crop damage this past week was due to rain.
