

For the Period September 13 to 19, 2016

A dry and windy week has allowed producers to make significant harvest progress. Sixty per cent of the 2016 crop has been combined and 28 per cent is swathed or ready to straight-cut, according to Saskatchewan Agriculture's weekly Crop Report. The five-year (2011-2015) average for this time of year is 62 per cent combined.

Regionally, harvest is furthest advanced in the southeast, where producers have 73 per cent of the crop in the bin. Sixty-six per cent of the crop is combined in the southwest, 53 per cent in the east-central region, 57 per cent in the west-central region, 54 per cent in the northeast and 48 per cent in the northwest.

Ninety-seven per cent of the field peas, 85 per cent of the lentils, 57 per cent of the durum, 56 per cent of the spring wheat, 47 per cent of the canola and 15 per cent of the flax have been combined.

The majority of producers had good harvest weather for most of the week. Rain showers toward the end of the week stalled some field operations for a day or two, particularly in the central and northern regions. Precipitation ranged from nil to 89 mm in the Tramping Lake area. The Elfros area reported 18 mm, Rosthern and Unity 15 mm and Nipawin, Debden and Barthel 19 mm. Most other areas that reported rain received less than 12 mm for the week.

Provincially, cropland topsoil moisture is rated as nine per cent surplus, 86 per cent adequate and five per cent short. Areas around Porcupine Plain, Tisdale and Arborfield are getting some relief from excess moisture conditions; however, 36 per cent of cropland acres are reported to have surplus moisture at this time. In areas around Rosetown, Kindersley and Biggar, 21 per cent of cropland acres have surplus moisture. Hay land and pasture topsoil moisture is rated as four per cent surplus, 84 per cent adequate, 11 per cent short and one per cent very short.

One year ago

Cool and wet weather slowed harvest. Sixty per cent of the crop had been combined.

Also available on the Ministry of Agriculture website at www.saskatchewan.ca/crop-report.

Consistent moisture has resulted in good pasture growth throughout the growing season. Pasture conditions across the province are rated as seven per cent excellent, 70 per cent good, 21 per cent fair and two per cent poor.

Strong winds blew some canola swaths around. Hail was reported in the Tantallon and Wynyard areas. Bleaching, sprouting, fusarium and earth tag are causing grade loss.

Producers are busy harvesting, hauling bales and controlling weeds.

Southeastern Saskatchewan:

- Crop District 1 – Carnduff, Estevan, Redvers, Moosomin and Kipling areas
- Crop District 2 – Weyburn, Milestone, Moose Jaw, Regina and Qu'Appelle areas
- Crop District 3ASE – Radville and Lake Alma areas

A week of dry and windy weather allowed producers to make progress with harvest. Seventy- three per cent of the crop is combined, and 16 per cent is swathed or ready to straight-cut. The five-year average for the region is 70 per cent combined. Crop District 1A has 83 per cent in the bin, 1B 74 per cent, 2A 84 per cent, 2B 58 per cent and 3ASE has 87 per cent of the crop combined.

Very little rain was reported in the region for the week. The Indian Head area recorded 10 mm, while the Carnduff and Grenfell areas reported 4 mm. Most other areas reported no rain for the week.

Cropland topsoil moisture is rated as four per cent surplus, 77 per cent adequate, 17 per cent short and two per cent very short. Hay land and pasture topsoil moisture is rated as five per cent surplus, 75 per cent adequate, 18 per cent short and two per cent very short. Moisture conditions vary greatly across the region. Wet soil conditions in Crop District 1B are improving and the district now reports surplus topsoil moisture on only 13 per cent of cropland.

Continued moisture throughout the growing season has allowed the majority of pastures to remain in good condition for fall grazing. Three per cent of the region's pastures are in excellent condition, 58 per cent in good condition, 30 per cent is fair, six per cent is poor and three per cent is in very poor condition.

Crop damage is mainly attributed to weathering caused by disease and too much moisture. Downgrading is due to bleaching, sprouting and fusarium. Producers have commented on above-average yields. Some producers are expecting to finish harvest this week. Producers are busy with harvest, fall weed control and bale hauling.

Southwestern Saskatchewan:

- Crop District 3ASW – Coronach, Assiniboia and Ogema areas
- Crop District 3AN – Gravelbourg, Mossbank, Mortlach and Central Butte areas
- Crop District 3B – Kyle, Swift Current, Shaunavon and Ponteix areas
- Crop District 4 – Consul, Maple Creek and Leader areas

Dry, warm and sunny conditions most of the week allowed producers to continue with harvest. Sixty-six per cent of the crop is in the bin, up from 47 per cent last week. The five-year average for the region this time of year is 76 per cent combined. Sixteen per cent of the crop is swathed or ready to straight-cut. Crop District 3ASW is reporting 47 per cent of the crop is in the bin, 3AN has 74 per cent combined, 3BS has 66 per cent combined, 3BN 72 per cent and 4A and 4B have 79 and 59 per cent combined, respectively.

Very little rain was reported in the region. The Admiral area recorded 4 mm and the Kyle area reported 5 mm. Most other areas reported trace amounts or nothing.

Cropland topsoil moisture conditions are rated as two per cent surplus, 93 per cent adequate and five per cent short. Hay land and pasture topsoil moisture is rated as 88 per cent adequate and 12 per cent short. A dry week has helped alleviate some excess moisture conditions, particularly in Crop District 3BN, which is now reporting just four per cent of cropland acres with excess moisture.

Pasture growth is holding up as fall grazing continues. Four per cent of the pastures are rated as excellent, 86 per cent are in good condition, nine per cent in fair condition and one per cent in poor condition.

Most crop damage this week is due to bleaching, sprouting and staining caused by prolonged wet conditions. Downgrading of the durum crop is mostly due to Fusarium head blight. Some farmers are expecting to finish harvest this week.

East-Central Saskatchewan:

- Crop District 5 – Melville, Yorkton, Cupar, Kamsack, Foam Lake, Preeceville and Kelvington areas
- Crop District 6A – Lumsden, Craik, Watrous and Clavet areas

Great progress was made in the field and the region is now on par with its five-year average of 53 per cent of the crop in the bin. An additional 38 is swathed or ready to straight-cut. Crop District 5A has 45 per cent combined, 5B 44 per cent and Crop District 6A is furthest advanced with 66 per cent harvested. Weather conditions were dry and windy, allowing for a good run on harvest; however, rain delayed in some areas on Sunday stopped further progress. The Langenburg area reported 8 mm of rain, Kelliher 4 mm, Raymore 18 mm, and Watrous 15 mm. Most other areas reported under 8 mm for the week.

Topsoil moisture conditions on cropland are rated as 16 per cent surplus, 82 per cent adequate and two per cent short. Hay land and pasture topsoil moisture is rated as nine per cent surplus, 82 per cent adequate and nine per cent short. Crop District 5B is reporting 19 per cent of cropland acres have excess topsoil moisture at this time.

Pasture conditions are rated as eight per cent excellent, 58 per cent good and 34 per cent fair.

The majority of crop damage this past week is attributed to the previous weeks' wet weather causing bleaching and sprouting. Downgrades in durum and wheat are mostly due to fusarium. Strong wind on the weekend scattered some canola swaths. Hail was reported in the Wynyard and Kandahar areas. Field conditions are very wet in some areas and combines are driving to the road to fill trucks. Producers are busy harvesting, hauling bales and controlling weeds.

West-Central Saskatchewan:

- Crop Districts 6B – Hanley, Outlook, Loreburn, Saskatoon and Arelee areas
- Crop District 7A – Rosetown, Kindersley, Eston, Major
- Crop District 7B - Kerrobert, Macklin, Wilkie and Biggar areas

Producers in the region made good progress this week thanks to warm and sunny conditions favourable to harvest. Fifty-seven per cent of the crop is in the bin and 32 per cent is swathed or ready to straight-cut. The five-year average for this time of year is 60 per cent combined. Crop District 6B is furthest ahead, with 64 per cent combined, while CDs 7A and 7B have 54 and 52 per cent combined, respectively. Crop District 7A made the most progress this week, thanks to very little rainfall. Producers got 22 per cent of the crop in the bin over the course of the week.

Rain on Sunday stalled combines for a couple of days in most areas. The Outlook area reported 8 mm, Rosthern and Unity 15 mm, Biggar 6 mm and Tramping Lake 89 mm.

Topsoil moisture conditions on cropland are rated as 12 per cent surplus and 88 per cent adequate. Hay land and pasture topsoil moisture is rated as three per cent surplus, 95 per cent adequate and two per cent short. Crop District 7A is reporting that 21 per cent of cropland has surplus topsoil moisture.

Pasture growth is holding up as fall grazing continues. Nineteen per cent of the pastures are in excellent condition, 71 per cent good and 10 per cent are in fair condition.

Hail was reported in the Outlook area, but damage is expected to be very minimal. Durum is being downgraded due to high fusarium levels. Rain has caused bleaching in some of the swathed and standing cereals crops. Field conditions in the Rosetown area remain very wet and producers are working cautiously to avoid getting their equipment stuck.

Northeastern Saskatchewan:

- Crop District 8 – Hudson Bay, Tisdale, Melfort, Carrot River, Humboldt, Kinistino, Cudworth and Aberdeen areas
- Crop District 9AE – Prince Albert, Choiceland and Paddockwood areas

Five days of good harvest weather allowed producers to get many acres combined. Fifty-four per cent of the crop is now in the bin, up from 33 per cent last week. The five-year average for this time of year is 49 per cent combined. An additional 38 per cent is

swathed or is ready to straight-cut. Crop District 8A has 43 per cent of the crop combined, 8B has 56 per cent combined and 9AE has 87 per cent of the crop in the bin.

Harvest conditions were favourable for most of the week, but rain set in again on Sunday. The Nipawin area reported 22 mm of rain, Star City 14 mm, Humboldt 15 mm, Kinistino 8 mm and Garrick 13 mm.

Cropland topsoil moisture conditions are rated as 16 per cent surplus and 84 per cent adequate. Hay land and pasture topsoil moisture is rated as 15 per cent surplus and 85 per cent adequate. Crop District 8A (around Tisdale, Arborfield and Porcupine Plain) is reporting that 36 of cropland and 28 per cent of pasture and hay land have surplus topsoil moisture at this time.

Pasture conditions are rated as 11 per cent excellent, 80 per cent good, eight per cent fair and one per cent poor.

Most crop damage this past week is attributed wet harvest weather. Field conditions remain quite wet and equipment is getting stuck. Some durum and wheat crops are being downgraded due to fusarium. Many producers are commenting on the good yield and quality of the oat crop.

Northwestern Saskatchewan:

- Crop District 9AW – Shellbrook, North Battleford, Big River and Hafford areas
- Crop District 9B – Meadow Lake, Turtleford, Pierceland, Maidstone and Lloydminster areas

Warm and dry weather for most of the week allowed producers to make exceptional progress with harvest. Forty-eight per cent of the crop is now in the bin, up from 17 per cent last week. An additional 47 per cent is swathed or ready to straight-cut. The five-year average for this time of year is 46 per cent combined. Harvest is furthest advanced in Crop District 9AW, where 57 per cent of the crop is combined, compared to CD 9B, which has 39 per cent combined.

Rain set in on Sunday, stalling many field operations for a couple of days. The Debden area received 22 mm of rain, Speers and Barthel 19 mm, St. Walburg 11 mm and Neilburg 6 mm.

Cropland topsoil moisture is rated as one per cent surplus, 94 per cent adequate and four per cent short. Hayland and pasture topsoil moisture is rated as four per cent surplus, 84 per cent adequate and 12 per cent short.

Pasture conditions are rated as one per cent excellent, 44 per cent good, 52 per cent fair and three per cent poor.

The late-season rains have caused some staining in pea crops and bleaching in cereal crops. The majority of crop damage this past week was due to rain, which is causing downgrading. Some crops were combined tough last week and placed in aeration bins. Producers are busy harvesting, controlling fall weeds and hauling bales.

Saskatchewan Harvest Progress - Sept 19, 2016
